Why don't you run this by the DXCC desk?

> Of all the DXers worldwide, how many have submitted for DXCC?

Most.

> Or do you have some other way to measure it?

The overwhelming majority of DXers worldwide accept the DXCC program as
the standard and participate in it. There is no other standard which
comes close.
If you had a clue about DXing, you'd have come to that conclusion long
ago.

I don't believe they would do that.

I haven't asked them to.

...and for good reason. You'd only look like a fool (again).

```

You're welcome to go back and re-read it at any time. It isn't my statement which needs clarification, it is your comprehension.

I thought this one would get some action.

I'm just quoting the ARRL (and I agree with them) -- URL:
http://www.arrl.org/tis/info/pdf/repeater1.pdf

"Don't call CQ to initiate a conversation on a repeater." --- ARRL,
Repeaters - How To Use Them.
I agree that simplex operation frequently uses CQ to good effect.

Your comment on "monitoring" or "listening" is just fighting traditional
protocol.
On San Diego repeaters and Bay area repeaters, one can listen for weeks, nay
months and never hear a CQ

Can you use CQ on a repeater -- sure, but be prepared to have 16 VHFers come
back and explain why no one uses CQ on a repeater. Your locale may vary. I'm
not saying what I would like it to be --- just the way it IS by traditional
protocol.

At one time VHF was the land of technical repeater builders, many not from
HF and they developed their own protocols. No CQ's, Q-Signals HF Jargon --
back then. But Q-Signals have crept back in except most VHFers don't know
what QRV or QRU means. And they should -- nice short hand during emergency
communications when time is critical.

On some repeaters -- "monitoring" is reserved for control ops. Others
announce their presence and invite a QSO by listening.

Even travelling across country, I don't ever remember a CQ on a repeater.

When in Rome ---- Oh well -- nuff

Dave, I happened to show the past few exchanges here to some folks at work. Some I don't even know who got involved. An interesting point was brought up. What's so different about your "shock" value in the statement you make above, from the "shock" value of statements that I make? We simply make them from different perspectives.

The other thing that was asked is, do I smile at your "shock" statements. Generally, yes, I do. I can almost guarantee a constant frown on your face, though.

So, you shock away; and I'll shock away.

Kim W5TIT

I did that for about the first year of operation myself. Now the only ones I log are the ones that are infrequent or first time contacts.... Got rid of that anal-retentiveness that seems to run prevalent in the ham world.

Now I understand your definition of the words "No-coder" as I assumed that you meant any technician license class without the code endorsement. If your comment was based on the definition that I thought you were referring to, then I guess I felt you were wrong in your statement. But I see your definition is different.

Is this what you think? If not, then the post in

Looks like Hans is the only one to venture an answer, and you're
right Hans, the "KG1" was used in Iceland by personnel on the NATO
base up until influential members of the Reykjavik Radio Club lobbied
their government that the prefix was an insult to Icelandic sovereignty.
An amendment to the SOFA agreement required NATO personnel
to obtain "TF" call signs for amateur radio operations. The plan
backfired when NATO base personnel began operating the base club
station 24/7 and handing out "TF" confirmations to the tune of several
hundred a week. The anger went so far that NATO personnel were
banned from attending meetings of the Reykjavik Radio Club in
downtown Reykjavik. We were met at the door and told to get out, that
we were not welcome. Why? Because the Icelandics, I.E. Reykjavik
Radio Club wanted to keep Iceland a rare DX contact on the air, and
that could not occur with us sending out hundreds of QSL cards a week,
confirming a "TF" contact. The Reykjavik Radio Club wanted all ham

radio operations from the NATO base to cease totally. However, the U.S. State Department, realizing ham radio was a morale factor for NATO personnel, struck a compromise with the Icelandic government. Henceforth, NATO personnel would use their home country call signs, followed by a /TF, or "portable TF." Reykjavik Radio Club members (Icelandics) were still not happy and retaliated by voting a permanent ban on all foreigners from meetings of the Reykjavik Radio Club and prohibiting any Icelandic from engaging in domestic communication with resident foreign stations. Don't ask me how such a ban worked. I have no idea, but I know of at least one Icelandic who defied it, and Igmar Yohonasson (sp), president of the Reykjavik Radio Club, had the guy's ticket revoked in 72 hours. So much for international ham radio friendship in the Land of Ice, Fire, and Snow.

Except when Larry is conducting an impromptu "SET." In which case no
one is "listening" or "monitoring."

Meanwhile, there's no reason why CQ won't work on FM. Its unusual
enough there that you might actually get a response.

Meanwhile, I did have permission from someone authorized to do so,
even when you said that a military commander could NOT do so.

Yes, yes, Dave. You've said that before. But saying it and saying it
often doesn't make it true, no matter how hard you wish it so.

You did, based upon DXCC rules, claim my operation was illegal. But
you have been wrong on so many counts that you really don't recall
what you've said anymore.

Tell us again how a military commander cannot authorize amateur operations.

That, in and of itself is a good argument to occasionally toss out a "CQ" on a repeater. We need some contrarians around just to keep ARRL from thinking they are the arbiter of proper radio procedure.

Yes, I'm a fervent supporter of ARRL, but it gets up my nose when folks attempt to turn ARRL 'opinion' into 'The Rules'.

QRZ?

It's basic stuff. HF Amateur Radio 101.

>BTW -- I've thought of trying some 450-ohm ladder line to feed my dipole,
>but the total length would be around 15 feet. Is this good or bad?

Figure it out.

Download W7EL's EZNEC demo version and model the sucker. Or get Reg Edwards' DIPOLE3 and figure out the impedances and losses.

> Am I
>going to have a "radiating" feedline?

depends on the balance.

>Currently the antenna is fed by
>a scrap piece of RG-58 about 12 feet long. I also have heavy-duty 300-
>ohm twinlead -- would that be just as good?

Do the modeling and tell us. Google will lead you to the websites and the freeware will tell you the answers.

>I'm also thinking about creating
>a new dipole which would be a half-wave on 40 meters, but it would have
>to be folded quite drastically. What are the issues here?

Cancellation.

No bend should be more acute than 90 degrees. Total bending should not exceed 180 degrees.

Run the EZNEC model and you'll see.

A trap dipole can be built that covers 40, 20 15 and 10 meters with a single pair of traps and a total wire length of 54-55 feet.

Perhaps some "tough love" and an Antenna Book is in order here.

If it is OK for TIT to have such a call, since she claims to be doing such for 'shock' value, then it should also, by her standards, to be OK to have a calll such as 'DIK' or 'FUK' or "KNT'.
Why not?
Of course if one were to desire to obtain such calls one would also, by projection, think that such calls or persons requesting such calls be obliged to carry as much cellulite on and about their posteriers as Kim does.
It is no secret that TIT is less than voluptuous and has years ago lost her "girly figure".
Sorry, Kim, but them's the ugly and indisputable facts. Your days of 7/8 Petite are long gone if indeed they ever were.
Not to be personal, Kim, but just how many years ago WAS it when you used to be able to squeeze into a 7/8? You were probably what? Nine or ten years old?
No need to be ashamed...most women your age wear tents and very dark panty-hose...it helps hide your ever-widening hips and the dark panty-hose hides the varicose veins. Such is life...eh?
Color me cruel...

Well, for the most part the ARRL is inconsequential. Since only 30% of
Amateurs belong...well, that alone says something.
The ARRL wants your $$$....and more $$$...
It really IS OK to say NO to the ARRL!
It really IS OK to ask just what the ARRL has done for you.
Do NOT fall for the ARRL members' arguments that if you are not a member you
are part of the problem.
That is old hat.
You can keep your Ham license year after year after year and the ARRL has
not one whit to say about it.
Bottom line...YOU do not need the ARRL to keep your license. The ARRL needs
you, needs your money to stay in operation. YOU do not owe the ARRL one
single penny. Not one.
You can easily tell the ARRL to take a hike or, better yet, not send them a
penny unless you so desire.

>Color me cruel...

We'll just color you yet another of a growing number of disenfranchised cowards with insufficient manhood to put your name to your comments.

You're a loser. Another 44 inch waist still trying to wear those 36 Dickies to work, held together by yet another truck manufacturer belt buckle. You most likely have your thinning bangs combed back over your bald spot that's usually covered with some concrete company logo ball cap. You probably tried out for the male character in Dixie Chicks video "Goodbye Earl", but were passed over because you thought "Redneck and Rude" were posterboys for Miss Manners.

And that loud whistle heard as the neighborhood nymphet walks by is not a "wolf-whistle", but a vain attempt by you to haul that beer belly back up to your chest before she notices...Fat chance. (pun intended)

You're only hope of experiencing any "satisfaction" with a woman is to humilate and initimidate her in yet another failed attempt to position yourself in a place of mastery over her.

"Color (you) cruel"...?!?! Nahhh...I'll just color you YELLOW for not having the guts to make such ugly comments and put your name to them. Putz.

Steve, K4YZ

'Snot really Jim's point. In your situation with short coax runs the
flavor of the coax used is a total no-counter, as a practical matter I
seriously doubt that you could discern any any difference in the S/N
ratios between RG-174 and two inch Heliax feedlines.

> BTW -- I've thought of trying some 450-ohm ladder line to feed my dipole,
> but the total length would be around 15 feet. Is this good or bad?

Neither. Feedline length, any feedline, doesn't make any difference if
ya efficiently transfer the watts coming out of yer TX to the dipole.
The whole trick is the tuner in practical situations.

> Am I
> going to have a "radiating" feedline?

Where did you get the notion that radiating feedlines are necessarily
a bad thing? N2EY was there one Field Day midnite when I worked a VK
and a JA back-to-back on 20 cw with what, for all practical purposes,
was a radiating feedline.

> Currently the antenna is fed by
> a scrap piece of RG-58 about 12 feet long. I also have heavy-duty 300-
> ohm twinlead -- would that be just as good?

A balanced line like TV twinlead or 450 ohm ladder line should be fed
with a balanced tuner. Which the 949E very decidely is NOT despite the

advertising hype. The thing will introduce huge losses despite the warm fuzzy SWRs the meter displays if ya use it in it's "balanced tuner" mode. Real balanced tuners today are homebrew country. The 949E is another example of the dumbing-down of ham radio when ya try to use one as a "balanced tuner". You need a coax-fed dipole which is "sorta resonant" and the 949E will pretty efficiently trim the SWRs down to a level which makes yer TX happy.

> I'm also thinking about creating
> a new dipole which would be a half-wave on 40 meters, but it would have
> to be folded quite drastically. What are the issues here?

The only issue is folding any part of either one of the two legs of the dipole back on itself or ya run into the "cancellation effect". Total length of a 40m dipole is 66 feet give or take. One leg is roughly 33 feet long. The first segment per leg can go west, the second segment can go south (or north) from there and the third segment can go down (or up) vertically. There is nothing at all sacred about the segment lengths as long as they add up to 33 or so feet. Just don't run two segments in the north-south, east-west or on the up-down axes, etc., i.e., don't run any segements paralell with each other. Ditto the leg on the other side of the coax feedpoint. Also the other side does not have to be symmetrical wrt to the other side. At all. Should open up a lotta installation possibilities particulrly in scrunched spaces. For even bigger kicks run yer usual 20/10 (15?) parallel wires alongside the 40m legs and ya get it all, no EZNEC, no traps, no bullshit.

The best investment you could possibly make wrt to building HF dipoles is an MFJ 259B antenna analyzer. If ya trim the wire lengths right and the 259B at the coax connector to the radio shows a 10:1 or less SWR the 949 will clean up the remaining SWRs OK.

Don't have a damned thing to do with ham radio policy.

Oh--did you think I meant that folks were listening or monitoring when
they aren't actually listening and monitoring--like when they have their
transceivers turned off?

> Meanwhile, there's no reason why CQ won't work on FM. Its unusual
> enough there that you might actually get a response.

If CQ is used on 160m and CQ is used at 10m and CQ is used on 2m SSB or
CW, there is no reason that it can't be used on FM. The obvious caution
is that it isn't necessary to say it more than once, followed by your
callsign when using a repeater.

Nope. You CLAIM to have had permission from someone just up the chain
from you. You must have assumed that the material on the League's web
site meant any officer over you. You must have assumed that it wasn't
important to have such permission in writing.

> > To summarize:
> >

> Yes, yes, Dave. You've said that before. But saying it and saying it
> often doesn't make it true, no matter how hard you wish it so.

No, writing it doesn't make it true. It is true because it is
accurate. Writing it simply points it out again since you don't seem to
grasp the implications. Your prior statements on morality and ethics
ring hollow in the face of the reality that you had no proof of
permission to operate legally and that your operation won't be accepted
for DXCC credit.

I thought you might be sharper in 2003 than 2002.

Nope. Try again. I claimed that your operation was illegal. I also claimed that your operation was no good for DXCC credit.

> But
> you have been wrong on so many counts that you really don't recall
> what you've said anymore.

Izzat right?

> Tell us again how a military commander cannot authorize amateur
> operations.

Let's say you work as a weatherman for an airlift command post. Let's assume that the commander is a Colonel. You work directly for him. Would you believe that he is authorized to grant you permission to operate on the ham bands from your overseas post of assignment? Do you think it is necessary for such authorization to be in writing? Would you have nagging doubts about permission issued by such an individual given that he is not in charge of U.S. forces in the country? It wouldn't surprise me in the least if your "commander"--you know, the guy who supposedly told you it was okay for you to spray RF in the ham bands from Somalia--would respond, "The hell I did!" if quizzed by anyone on whether he ever gave you the go-ahead.

41. ARRL certification program

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-01 16:44:41 UTC
From: vshah101@aol.com
Message-ID: <20030101114441.29733.00000332@mb-cv.aol.com>
Source record: 59123

From Nickolaus E. Leggett N3NL
"Hello,
It would be useful if the ARRL certification
program developed over time into an engineering
apprenticeship program where hams could acquire
knowledge and certifications that would enable
them to participate in engineering activity. At
the present time, it is very difficult for adults
to get the required university instruction to jump
the various academic hurdles to engineering. However,
the ARRL could offer a series of modular courses and
credentials as well as credentials offered in
cooperation with other groups such as the Society of
Broadcast Engineers (SBE) and the National Association
of Radio and Telecommunication Engineers (NARTE) to
enable aspiring hams to work their way up the
technology ladder from the basics of Ohms law to the
fine points of radio engineering. The modular
structure of this program would allow the students to
work step-by-step in improving their knowledge with
the definite milestones of specific examinations and
credentials for each of the intermediate modules of
knowledge. This structure would be better suited to
busy adults and many bright youth than the
all-or-nothing engineering credentials granted by the
universities. Also, a student with a set of
intermediate credentials could establish his suitability
for an apprentice program in engineering. Such
apprentice programs would be a useful way for recruiting
new talent into the engineering profession. The ARRL
could contribute to this public service."

Good suggestion. This will help improve the technical competence of radio amateurs and will help keep the bands. Simply occupying the band (as in contesting) is not sufficient to prove meritorious use of the bands.

From surveys, there seems to be a lack of interest in the technical aspect. Antennas, operating, contesting, and Morse code had the highest interest levels. Those interested in the technical aspects don't join.

By increasing the technical competence, or by current testing to actually mean something, this enhances the image of amateur radio. Also, lets not tie code to the technical license classes.

Currently, most of the amateur radio clubs focus on operating. Let's have more technical clubs.

Excellent point, Ryan. Unfortunately, corporate welfare seems like "the thing" these days. Heck, what is up wid dat, anyway? If your business can't make it, the govt. just hands over some money, huh? Y'know, seems like countries in the rest of the world, and the corporate giants here get all the fringe benefits of our hard earned money.

Some aren't too bad with it. But, I do know that I've relayed experiences
of making contacts--say, for instance, Japan--and retold the entire
conversation, what the Japanese station said the weather was like, etc., and
have been asked, "well, where's the QSL card?" If that card ain't there, to
some, it didn't happen...LOL

Good grief, you're going to have to do much better than that, whomever you
are. You see, I'm liberated. I love me enough for the entire rest of the
world. Now, you, on the other hand, really seem like the type that needs
the approval, respect, and admiration of others in order to value yourself.
So, my suggestion to you is that you'd better get busy. There's still time.
It's never too late.

So it isn't the ARRL recommendation that bothers you, but rather those that, as you state: "attempt to turn ARRL 'opinion' into 'The Rules'"

I agree to a point, but in this case (CQ on a repeater) I haven't heard anyone do that in over 10 years here in the Northeast. That seems to be a pretty commonly accepted practice then (i.e. using "K2UNK Listening") instead of calling CQ on a repeater.

Would I care if someone did, not at all. Would I suggest to someone else that the common practice is not to call CQ on a repeater? Sure, why not? I wouldn't position it as "The Rules", but rather just as the common practice in use in the area.

Cheers and Happy New Year to all.
Bill K2UNK

"KC8PMX" <kc8pmx@NOSPAMdiamondcs.net> wrote (about keeping a log)

: I did that for about the first year of operation myself. Now the only
ones
: I log are the ones that are infrequent or first time contacts.... Got rid
of
: that anal-retentiveness that seems to run prevalent in the ham world.

Keeping a log is "anal-retentiveness"? C'mon, Ryan!

Certainly it's not something that every ham might care to do, and that's OK, but others enjoy having that sort of a detailed record of their operation.

I don't log UHF/VHF operations, which in my case are purely local chit-chat, but I keep a computer log of all HF operation. Partly that's a result of "habit" from the days when FCC required it, I suppose. But it's also fun to be able to use as a "notepad" to refer to the next time I run across a station I've worked before, it's useful to confirm QSL requests, or any of a number of other uses.

You're free to keep a log or not keep one --- I couldn't care less which you do --- but implying that log keepers are "anal retentive" strikes me as pretty "simple minded" (to steal a phrase from your tag-line).

With all kind wishes,

de Hans, K0HB

>something, this enhances the image of amateur radio.

Isnt this cute, we test Hams on Technical stuff. Then after they get there License the ARRL offers courses so they can learn the stuff. I thought that was the purpose of testing, to see how much someone really knew about the material. HAM WRITTEN TEST do away with them, there a JOKE.

From: wa8ulx@aol.com (WA8ULX)
>HAM WRITTEN TEST do away with them, there a JOKE.

The written test has good, relavant material - if one learns the material. The way the current test is given, one can pass it without learning the material.

From: wa8ulx@aol.com (WA8ULX)

The test covers these aspects briefly. Certification covers a particular aspect in more depth. So, this offers something not covered by the testing. For example, the "Antenna Modelling" class is not on the test, but provides more depth for certification.

The newsgroup has degenerated into a personal playground.

This newsgroup is filled with: personal arguments, name calling, non policy related news (such as announcment of events), (non radio) conversation, radio items that should be in other newsgroups, ...etc.

Very little discussion of amateur radio policy occurs here.

Didja try a site that might actually present this information, such as
http://www.fcc.gov or http://www.arrl.org or maybe even http://www.qrz.com ?

news groups are bulletin boards -- and there's nothing stopping you from
posting questions or presenting what you know....

Without an engineering college degree (BSEE), you'll just
be a "technician". They do lab lackey work like soldering
wires, ordering parts and such.

Now if the above ARRL credentials were worth college
credit that you could apply towards a real college degree,
then it would be worthwhile. One thing that would be
needed is proctored exams. Maybe using VEs, or maybe
going to a local college with a sealed envelope with the
exam inside, and they (for a fee) verify the seal, open

it, then sit you down in a classroom and hand you the exam. You answer the questions, and hand it back to them. You and they sign off on it, and they mail it in. Purpose is to prevent cheating.

Most colleges will likely want you to take at least half the courses in house though. But you could get the first two years completed via the above.

Sorry, was thinking of someone wanting to design said equipment.
And most companies that do such design work will require college
degrees.

Repair and design are related but different skill sets.

The ARRL handbook & other similar ARRL educational materials were out
there long before you were and they will teach everything needed op
pass any FCC ham test.

The ARRL certifiction programs have little or nothing to do with
passing license exams, the intent is to provide in-depth education on
specific areas of personal interest.

And when there is no policy changes being made at the FCC
there is nothing to discuss here except K4YZ & W5TIT's
new found friendship, and of course Larry puking at the
thought of it! ;^)

I'm ready to discuss something useful for once, if someone
could think of something OTHER than code/no code and/or
dumbed down license testing, that is.

Have a "Hammy" New Year!

No, I said commander.

You must have assumed that the material on the League's web
> site meant any officer over you.

No, the material on the ARRL web site was read by me 10 years after my
tour in Somalia. It essentially state the same thing as the other
amateur on station told me.

You must have assumed that it wasn't
> important to have such permission in writing.

That is correct.

> > > To summarize:
> > >

Hmmm.

It is true because it is
> accurate.

And my statement that I had permission from my commander is accurate.
Him putting it in writing doesn't make it any truer.

Writing it simply points it out again since you don't seem to
> grasp the implications. Your prior statements on morality and ethics
> ring hollow in the face of the reality that you had no proof of

I don't work people out of band, if that's what you meant.

> I thought you might be sharper in 2003 than 2002.

Nope, I'm the same.

86. Why hams think we deserve the 5 mhz band (was: You have to be kidding!)

Sounds good to me! My opinion is because with the crowding we
now have on the HF bands in that general area (40 & 80) it would
be a good band to give us more "elbow" room in, and provide
more frequencies for the emergency communications when needed.
OTOH anytime someone discusses the possibility of more spectrum
we should jump on the band wagon with both feet, so long as it don't
cost us the "ARS farm" in the long run.

BTW I made my first CW contact last night.
I still have the sweaty palms to prove it. ;^)

From: Robert Casey wa2ise@ix.netcom.com
>Without an engineering college degree (BSEE), you'll just
>be a "technician". They do lab lackey work like soldering
>wires, ordering parts and such.

Even with a BSEE, you may be some kind of the many forms of "test engineer". This may include statistical failures, fixturing, soldering, ordering parts, maybe some troubleshooting.

This work may be higher skilled or LOWER skilled than a technician (yet they want someone with a BSEE to do the job). Also, it is getting common to append the word "engineer" to every low skilled task.

I am digressing, but it should be noted that it is very common for people with BSEEs to do the lackey work.

>Now if the above ARRL credentials were worth college
>credit that you could apply towards a real college degree,
>then it would be worthwhile.

There are few such courses now in colleges that cover the relevant material. If the quality material is covered at the equivalent hours and equivalent level, it should be accredited. Some topics may be only worth 1 credit instead of 3, but may be valuable additions.

It would be good to see some design (eg filter design) courses, as well as the emergency communications and other courses offered currently.

>Most colleges will likely want you to take at least half the
>courses in house though. But you could get the first
>two years completed via the above.

Colleges have offered credit for off campus courses. The ARRL courses would be a real plus. Also, they could have the benefit of being offered regularly, while colleges often offer the course every other semester, or even every other year.

>Sorry, was thinking of someone wanting to design said equipment.
>And most companies that do such design work will require college
>degrees.
Naturally, design is the most desired work. Few people with BSEEs actually do design work. Certifications in the specific area may help you obtain a higher level than otherwise.

Well, absolutely. I don't like "Neighborhood Associations" either. I'll speak out of turn, though, and state that I think the CCR issue that the ARRL was trying to get through Congress last year deals not only with Neighborhood Associations, but deed restrictions as well.

Our dislike of them aside, though: what do you think of the ARRL asking congress to pass a bill that would, essentially, render a signed-and-agreed-to-contract useless? While I disagree wholeheartedly with CCRs, and read the deed restrictions on this property before we bought it, the question still remains: should I request congress to support my amateur radio interest by passing a bill that says I don't have to abide by the contract I agreed to? Isn't that the same as someone who relishes antique cars being able to get a bunch of like-minded people together and go to congress to pass a bill that says they can now have a "junkyard" (in the eyes of their neighbors) because they are "special."

I don't agree with it. I also don't think it's good publicity to challenge contractual agreements because of our interest in amateur radio. If I signed a contract, I don't then turn around and "come up with" a way to get out of it. The bigger issue, as I see it, would be to challenge the deed

restriction or neighborhood associations--and even take them to court on our own. Does the ARRL feel strongly enough about the CCR issue to allow use of ARRL Counsel? I hardly think so.

This did degrade, the last time around--and I was one of the folks who joined in--into an argument about whether Neighborhood Associations and/or deed restrictions were a good or bad thing. It would be nice to see a true debate about the true issue. Let's accept that Neighborhood Associations and deed restrictions are present and here to stay. Yeah, they suck--or not; and yeah, they are overbearing--or not. The issue is: should special interest groups take issue against a contract they have signed? Was the ARRL right to spend so much time on this issue?

Kim W5TIT

92. Another Morse Code Opinion

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-02 01:27:38 UTC
From: "Mike H. KC8UBH" <mhaas@nospam.insight.rr.com>
Message-ID: <eAMQ9.10908$GF.5096557@twister.columbus.rr.com>
Source record: 59223

Well...if anything, I made ya look...

I'm about 3 1/4 weeks into studying for the 5WPM. I'm taking the General on Jan. 11.

I used the ARRL "You're introduction to Morse Code" and Nu-Morse.

My only complaint about the tape is that in about a week, if you're listening to everything twice and going back over stuff you didn't get the first (second, or third) time, is that at the end of side 1 of tape 2, the guy says, "...by now you should be gettting pretty good at copying code at 5wpm...) and you feel like heaving the tape across the room.

Code was really kicking me in the ass but now I'm starting to feel like I'm kicking back.

Will I pass the test? I might just squeak by. But with another week and 1/4 of practice, I'm hoping I'll feel even more confident.

So what's my opinion?

I'm glad I studied it. :) Even if I never use code again after I upgrade, it was a great experience I wouldn't trade for anything.

Considering how easy the written test is going to be, it was INCONVENIENT AND TOOK SOME EFFORT to learn code at 5wpm.

Do I care if they do away with code? Not really - but they damn well better make the written test one hell of a lot harder. When its as easy to get your General as it is to get your Tech - HF is going to get really stinky.

By the way - I heard a guy on 2 meters say "10-4" the other day. He caught himself and apologized...just wait till you start hearing that on HF!!!

Take care,

Mike H. - KC8UBH

60m phone would be dead useful. Either that or a 40m phone allocation that actually falls where the rest of the world use phone, or maybe a 30m phone allocation.

It is completely beyond me why only those US hams --outside-- Region 2 get to have a phone allocation at 7075-7100 kHz and not those in Region 2. Everyone else in the world can use phone anywhere above 7040 kHz, and everyone in Region 3 can use phone anywhere above 7030 kHz. Nobody else outside the US uses phone above 7100 kHz even when they can (and in Region 1 they can't) because of the Region 1 broadcasters putting out hundreds of kW up there.

Realignment of the 40m band to 6900-7200 kHz is a pipe dream, because it would only benefit us here in the US, so the ITU will never go for it, and the broadcasters wouldn't even move off if the spectrum was officiallly taken away from them, anyway. It would be so much easier if the FCC would just make a 'tiny' change so that all US-licenced hams in all regions (except Technicians, of course) could use phone from 7075-7100 kHz, not just a few in the Pacific. Won't happen, of course, too many CW and digital ops would oppose it.

I think the chances of getting phone somewhere around 5 MHz are actually much higher than those of ever getting a decent phone allocation near 7 MHz. Of course, a wider 30m band with a phone allocation would be a dream come true as well, but I'm not holding my breath.

If I want to work any DX above 3.8 and below 14.15 MHz, I have to use split VFOs, and hope that someone will listen up above 7.15 while I am listening below 7.1, and this will get more important again as the sunspots go away. 5 MHz looks like the best hope right now.

Is this a serious enough policy discussion for you? It's still phone ops v CW ops, though, or at least someone will turn it into that within the next two posts!

Mike
I listened to the code practice from the ARRL on their web site.
It is in MP3 & M3U files and can be downloaded and played
on your portable MP3 player. Check out the web page at:
http://www.arrl.org/w1aw/morse.html
I used the 5 & 7.5 WPM files, that way I was always hearing
it at a faster speed than the test was going to be.
And it's in real English not just random letters or words, and
each time the page is updated you get a new file instead of
the same old stuff off the tape.

Good luck on your test!
If I can do it ANYONE can!

Have a "Hammy" New Year!

It's the best I've seen in here for a while.
Maybe if we put blinders on we won't see
it drifts away from the subject.

I don't understand why all of the "world wide" frequencies
don't match "world wide" it's like the 3 Stooges did the
band planning for all the countries.

I've never even thought about a phone allocation in the 30m
range before, and I agree with you it's just a dream. But
it does seem kinda odd that all the bands have a voice
allocation except 30m.

If nothing else having a 5 MHz allocation would
give me a good reason to "clip" the Kenwood.
(It isn't now, and won't be without that kind of a reason!)

Have a "Hammy" New Year!

This is a story, not an opinion.

>I'm glad I studied it. :) Even if I never use code again after I upgrade,
>it was a great experience I wouldn't trade for anything.

Not only you don't use it, but the military, hospitals, etc do not use it
anymore. Its now obsolete.

Great experience is arguable. I know that, for me, Morse is not a great
experience. I know I can do Morse code. I just don't want to.

>Considering how easy the written test is going to be, it was INCONVENIENT

>make the written test one hell of a lot harder. When its as easy to get
>your General as it is to get your Tech - HF is going to get really stinky.

Or, maybe it will get better. You are just supposing.

>By the way - I heard a guy on 2 meters say "10-4" the other day. He caught
>himself and apologized...just wait till you start hearing that on HF!!!

Irrelavant. The "10-4" comment is just a way for you to introduce CB into the
argument.

'An only-coder is never a villian in his own eyes. Keep this in mind; it may offer a way to make him your friend. If not you can kill him without hate - and quickly.'

I think all CCRs that are in effect now should stand. Like you said it's a
signed contract, but no future ones should be allowed, or at least regulated
so as not to be to restrictive. I would never sign a deal that included my
not being able to put up antennas or anything else. BTW I do understand
the ones about junk yards, sheep, hog, and other farm related stuff inside
city or housing addition boundrys, that's a little different.

>

Now since I'm not a member of the ARRL I can't say anything much for
or against them, but I don't see where they are doing all that much good
for the ARS. It's kinda like a guy I worked with a few years ago, he

would come up and say "You know WW you ain't much, but your
all we got!" I always wanted to deck him for it to, but I knew better.

>so as not to be to restrictive.

The issue isn't the validity of contracts but the regulation of the
conduct of those who will deny the amateur the ability to put up a
reasonable antenna.

In my professional experience advising amateurs and handling their
cases as a Volunteer Counsel, the CC&Rs that flatly prohibit
antennas greatly outnumber those which provide some mechanism for
obtaining permission, and even in the latter cases the absolute
power of the "association" - usually one officer who cows all the
others or the professional property manager who cows the board - is
rarely disposed to permitting installation of antennas and support
structures.

The heroes (or are they cowardly lions in this matter) at the FCC
have flatly said that it won't do anything unless The Congress tells
them to do it, as happened with the pre-emption of anti-TV and dish
provisions of CC&Rs.

If they can do it for them they can do it for us. That's why
we are pushing through this bill.

>I would never sign a deal that included my
>not being able to put up antennas or anything else. BTW I do understand
>the ones about junk yards, sheep, hog, and other farm related stuff inside

It's a lot different - we all know that properly-installed
antenna towers are things of beauty !!

All true. The bad actor in most tuners is the "balun", which is simply not
meant to deal with highly reactive loads, or loads that differ markedly from
the design impedance (typically 50 or 200 ohms, depending on the ratio). Of
course if you can present the balun with a low-reactance 50 or 200 ohm load,
you don't really need a tuner....

Look up AG6K (Rick Measures) website on balanced tuners for a start.

Should be able to get ~3:1 "raw" and the tuner does the rest. Half size G5RV is
how big? (~52 feet)

>
>Don't have a damned thing to do with ham radio policy.

This is the only statement of 'RV's that I'm gonna disagree with. I see all sorts of pontificating on the "technical level" of today's hams, yesterday's hams, written tests, certifications, alleged "dumbing down", etc. All sound and fury, signifying nothing.

In the past, hams needed a certain kind of techno know-how to even get a rig on the air. Not knowing how to zero beat, properly tune up a pi-net, order a crystal, set your mike gain or read an analog dial could get ya in big trouble! In a ham radio world where homebrew and home repair was as common as QRM, technical knowledge was essential to all hams.

But much of that is gone now, unless a ham is into specialized parts of amateur radio. Most of the ham gear manufactured in the past 15-20 years needs no tune-up, has a digital dial, and is pretty reliable and foolproof. Not much techno knowledge needed, though it's always helpful.

But the one area where almost all hams really need to know their stuff is antennas. Particularly on HF, where much misinformation is treated as gospel, and where antennas often present the biggest challenge to amateur operation.

So antenna knowledge is definitely a policy issue.

103. Re: CCR Issue Revisited

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-02 03:13:17 UTC
From: n2ey@aol.com
Message-ID: <20030101221317.11569.00000447@mb-fy.aol.com>
Source record: 59234

First let me say I am neither an attorney nor a real estate expert, but I do have a bit of info on this subject.

In article <C663A6F2EA57E3CB.297184971CE7C514.9EAF75F267313972@lp.airnews.net>, "W5TIT" <seventythree@eightyeight.net> writes:

>Well, absolutely. I don't like "Neighborhood Associations" either. I'll
>speak out of turn, though, and state that I think the CCR issue that the
>ARRL was trying to get through Congress last year deals not only with
>Neighborhood Associations, but deed restrictions as well.

The main point of the bill being pushed is preemption of deed restrictions, just like TV antennas get.

Here's the blurb:

"A bill, HR-4720, has been introduced in the House of Representatives to provide relief for Amateur Radio Operators faced with private deed covenants, conditions and restrictions (CC&Rs) in erecting antennas. The measure would require private land-use regulators, such as homeowners' associations, to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. You can find more info at ARRL's web site..."

http://www.arrl.org/news/stories/2002/05/14/102/?nc=1

>
>Our dislike of them aside, though: what do you think of the ARRL asking
>congress to pass a bill that would, essentially, render a
>signed-and-agreed-to-contract useless?

That's not what's being proposed.

The bill would simply require that ham antennas get the same consideration as TV antennas, which have preemption.

>While I disagree wholeheartedly with
>CCRs, and read the deed restrictions on this property before we bought it,
>the question still remains: should I request congress to support my amateur
>radio interest by passing a bill that says I don't have to abide by the
>contract I agreed to?

In a word, yes.

>cars being able to get a bunch of like-minded people together and go to
>congress to pass a bill that says they can now have a "junkyard" (in the

>eyes of their neighbors) because they are "special."

Nope. Not at all.
>
>I don't agree with it. I also don't think it's good publicity to challenge
>contractual agreements because of our interest in amateur radio. If I
>signed a contract, I don't then turn around and "come up with" a way to get
>out of it.

Contracts are challenged all the time. Look at all the divorces in the US, even
though many of the people who get divorced agreed to "until death" when they
"signed" the contract. Bankruptcy is similar - creditors often accept less than
full value of the money owed them.

>The bigger issue, as I see it, would be to challenge the deed

>not; and yeah, they are overbearing--or not. The issue is: should special
>interest groups take issue against a contract they have signed? Was the
>ARRL right to spend so much time on this issue?
>
Answer: YES, on both counts.

Here's why:

First, buying real estate is not like other purchases. There's no "new" real
estate being created - only reused and converted from other uses. The amount of
residential real estate on the market at any given time in a particular area is
finite and not easily changed. So a person seeking to buy a house often faces
extremely limited choices. And as deed restrictions become more pervasive, the
percentage of available housing that is unrestricted continues to drop. The
pervasiveness of anti-antenna deed restrictions effectively eliminates choice
in many areas. End result is that "don't buy a restricted house" is not an
option for many people.

Second, the mere fact that a "contract" was signed doesn't mean it cannot be
changed at a later date. Contracts are renegotiated all the time - that's a big
part of contract law. And a valid contract cannot violate a person's civil
rights or the law. For example, deed restrictions that prohibit sale of a
property to "non-white" people exist - and have been declared null and void by

the courts.

Third, what is proposed is not a blanket preemption of all antenna restrictions. Rather, it would require reasonable accomodation. Big difference between a 90 foot tower with multiple beams and a G5RV in the trees, for example. Deed restrictions that prohibit all antennas are unreasonably restrictive.

And consider why such restrictions were put in the deeds. It's not about interference, because receiving antennas are included. It's not about appearance, because all types of antennas are prohibited, regardless of appearance. The real issue was to effectively force homeowners to sign up for cable!

Fourth, while many states require disclosure of deed restrictions, the requirement is not universal, nor timely. Often they are not revealed until closing. Of course that's classic caveat emptor, but when real estate sales require termite inspection, radon inspection, seller's disclosure, title search and insurance, escrow and a host of other things, it's not unreasonable for the deed restrictions to be presented up-front. But try and get them!

You mention antique cars. Consider the following scenario:

(It's HYPOTHETICAL, folks!)

Suppose you went to buy a new car or truck, and found a model you liked at a decent price. You make the deal and all is smiles and handshakes. But when you go to pick up the car, the dealer wants you to sign an "owner's contract" or some such, that requires you to do and not do certain things for the entire time you own the car.

You look at the agreement and note that all sorts of things are required, like keeping the car washed, properly maintained by authorized dealers using only approved parts and not performing unauthorized modifications. Failure to comply not only voids the warranty, it may cause you to incur fines and even have the car reposessed by the manufacturer - even after it's paid for and out of warranty! These restrictions are for the life of the car, not just the original owner, and you cannot get out of them except by selling the car. And they have nothing to do with safety or pollution standards - those things are already protected by applicable laws.

You ask what this is all about, and the dealer says the car company is concerned about its image being tarnished by owners who don't take care of their cars, hence the restrictions.

Now at this point, most folks would storm out of the dealership and take their business elsewhere. But they find most of the other manufacturers have similar rules, and buying a new car without such restrictions limits the choices enormously. Used car? The newer models all have the restrictions, and you don't want the problems of an older car.

What to do?

(end hypothetical situation)

Not everybody can move to areas where there are no restrictions. Here's a typical example:

Young professional couple - he's a doctor, she's an attorney. Both are hams. They move to a new city when he completes his training and gets a new job at a very respected hospital. He needs to live near the hospital, she needs to live near the county seat. They plan to have kids very soon so school quality is a big issue. Yet they find that most of the real estate on the market has unacceptable restrictions. What should they do - give up ham radio?

>be a good band to give us more "elbow" room in,

While I agree with this in principle, it's a hard sell to the regulators. They
can simply say "use another band" and "use more spectrum efficent techniques".
Also, if 40 becomes 300 kHz worldwide amateur....

>and provide
>more frequencies for the emergency communications when needed.

Same arguments as above. Main point of emergency comms is regional propagation
on 5 MHz, particularly during low sunspot times.

>OTOH anytime someone discusses the possibility of more spectrum
>we should jump on the band wagon with both feet, so long as it don't
>cost us the "ARS farm" in the long run.

Agreed! If we don't ask we'll never get.

It took me around 6 months of hard work to learn Morse code.
For some people it is easy, and others it isn't easy at all.

Morse code isn't a gauge of a person's intelligence, radio
ability, or goodness or badness as a ham. All it means is that the
person knows Morse code.

So if it is difficult for you, don't feel inadequate or
stupid. It's just harder for you.

>So what's my opinion?
>
>I'm glad I studied it. :) Even if I never use code again after I upgrade,

Yup, me too.

>Do I care if they do away with code? Not really - but they damn well better
>make the written test one hell of a lot harder. When its as easy to get
>your General as it is to get your Tech - HF is going to get really stinky.

Agreed. The test should be harder. Even then though, it won't
necessarily "keep the neighborhood clean" Lots of offenders have been
licensed for a long time, before presumed dumbed-down tests were
around. The key to keeping things on the up and up is hams who won't
tolerate on air abuse, and an enforcement system that backs them up.

>By the way - I heard a guy on 2 meters say "10-4" the other day. He caught
>himself and apologized...just wait till you start hearing that on HF!!!

We have a fellow who says 10-4 on our repeater, and a few who
ask for "handles". All are fine hams.

The military DOES use it and hospitals never did. So what? The guy was
saying that the learning experience was a good one.

>Great experience is arguable

THAT was an opinion, Dr Shah.

>I know that, for me, Morse is not a great
>experience. I know I can do Morse code. I just don't want to.

You sound like my daughter fussing about doing the dishes. She KNOWS she
can do them, but she just doesn't want to.

>"Took some effort" does not equal relavant.

To him it IS relevent, Vipul. You started off this post by redirecting
the poster on what is or is not an opinion. You obvioulsy ahve a very
difficult time yourself making the distinction.

>>By the way - I heard a guy on 2 meters say "10-4" the other day. He caught
>>himself and apologized...just wait till you start hearing that on HF!!!
>
>Irrelavant.

To those who are concerned about the thinning out of the Amateur Radio
gene pool, it is VERY relevent.

>The "10-4" comment is just a way for you to introduce CB into the
>argument.

And it is that influx of CB-like lingo that has many people concerned,
ergo VERY relevent, and unfortunately it goes hand-in-hand with the effort to
dispense with Morse Code testing.

"Repression" is the overt or covert actions of a government intended to
supress the opinions or actions of a people for social engineering purposes.

Mr. Mitnick was incarcerated for criminal acts that caused damage and
loss-of-service to his victims. He was afforded the full protection of the
United States legal system in his defense. He was guilty and lost.

Please take the time to learn the difference.

What about another form of corporate welfare other that corporate subsidies, and grants, what about abatements? If these corporations paid their fair share, then the tax burden would be smaller on all of us. For example I will pick on the local largest corporation near me, Dow Chemical. If they paid even something as small as 1% percent of the value of the property they own in Midland County, MI where the corporation is based, the tax burden on the residences would be alot less..... One percent is not much on thier bottom line, but for the average middle class or less person the relief would be great.

Obviously this would be in that "ideal" world.... Another spin on the "I gotta/had to do it, so do they" attitude.

In todays world, since we do not have to log anymore, yeah, I guess it
might. For that first year, I logged every single conversation, but have
not since. Only log the new ones for the most part. Although, I have
noticed that when I have chatted with some people recently, having access to
that log help to refresh my memory.

No... I was implying that there is "anal retentiveness" in the ham world,
with overzealous logging at this day and age would be a bit "anal
retentive." Regardless of band, mode etc., logging contacts that I already
have in the log seems a bit anal retentive to me. I see some hams around
here that do impact studies, do flowcharts etc, and other paperwork just
for something simple as mounting a mag mount antenna!

All in all, that sounds just about right. I might be able to pass the 5WPM, but by no means feel I've "learned" Morse Code. I talked to a guy recently who can do 40WPM...in his car...yikes!!!

> Morse code isn't a gauge of a person's intelligence, radio
> ability, or goodness or badness as a ham. All it means is that the

Agreed, absolutely.

Also - look up "Early Telegraphy" on the 'Net, and take a look at our predecesors...when their networks were called in their own day, "The Highway of Intelligence". Sound familiar? These guys (and gals) would go back to the office at night, get on the key, and talk to their friends all over the US and even across the ocean. I'd love to know what those conversations were like 160 years ago!!!

I personally find it disconcerting. The guy really did apologize but I'd
really rather not hear CB lingo. Its an awful reminder of what the bands
could degenerate into if we're not careful.

I'm not suggesting however that Code will keep that from happening. As long
as the standards are high enough where it takes some work to get your
ticket - I think we'll be fine.

Here are the number of unexpired FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of December 31, 2002:

Novice - 36,074 (decrease of 13,255)
Tech - 248,395 (increase of 42,401)
Tech Plus - 73,426 (decrease of 55,434)
General - 139,859 (increase of 27,182)
Advanced - 84,330 (decrease of 15,452)
Extra - 103,276 (increase of 24,526)
Total - 685,360 (increase of 10,568)

Dave, you are still under the assumption that a military commander
cannot authorize amateur operations. Now you wrongly assume that a
Colonel cannot be a commander, whereas Steve saw a commander under
every pair of butter bars.

Do I need to start counting cadence so you won't trip over your own
bootlaces?

Naw, too late. Just dust yourself off and keep going.

Brian

>
> Not only you don't use it, but the military, hospitals, etc do not use it
> anymore. Its now obsolete.

AM is obsolete - yet people use it
SSB is obsolete - yet people use it.
Homebrewing is not necessary as it was at one time. It is obsolete. -
Yet it is the biggest part of my hobby.
Morse CW is obsolete - yet people use it.
HF is obsolete. Why aren't more hams using the great frontier of RHF?
(ridiculously high frequencies) And yet here we are trying to get some
spectrum at 160 some kHz
FM is obsolete. -yet people use it

Why aren't we all using only digital modes for everything? After all
they aren't obsolete.

> Great experience is arguable. I know that, for me, Morse is not a great
> experience. I know I can do Morse code. I just don't want to.

You have expended more effort here complaining about Morse/CW than I
did actually learning it. And it wasn't easy for me.

Your statement is just another way of saying that the hf priveleges are
not worth the effort of learning Morse. So be it. Why do you complain so
much then? You don't have the priveleges because you don't want to take
the effort.

I took the liberty of clipping off the html you sent long with your post.

You blame the ARRL because you're an idiot Fiscus.
Let's discuss the
code test because that's the real rub with you.

Having several years of bitching the FCC staffers got fed up with the
controversy WRT Physician Waivers for code speeds greater than
5WPM suggested 5WPM for all classes of HF with no waivers.

The ARRL did the best it could with the counter suggestion of 5WPM for
General and 12WPM for higher classes. Since that would not have
completely ended the waivers the staffers opted to keep pushing
for the 5WPM no waiver plan and that is what we have. It is
not the ARRLs fault they tried but news flash they do not run
the FCC or any other branch of government.

If you are so far out in Montana that you just don't get how
government works let me fill you in. The FCC Commissioners are there
for a few years, the staffers are there for ever. If you think the
staffers are not driving the train you are sadly mistaken. You want
to be annoyed with someone over this non-problem I suggest you
start with the FCC GSA employees rather than the ARRL.

Internet access, no, but in contesting now, a computer is hard to do without. My computer is as much essential to my operations as is my hf rig.

> I am sure that at any given time, of all amateurs currently opearting on
> HF bands not more than 10% are connected to internet. And many many have
> not internet access at all.

I don't know how many have computers. But when a computer is less than the price of a hf rig, it shouldn't be too hard to get one. Most (all?) of the software will run on 486 machines and possibly even 386 machines. And especially when a person is contesting, if they are trying to finess it, they need something to look up who is where.

> If I am in the contest and I hear station K2G CQing, if I am multiplier

^^^^^^^^^^^^^^^^^^^
Not all properties are acquired by purchase. Especially with bequests
(inheritances), the [new] owner had no such opportunity, and such is not a
transfer (like a foreclosure is) that will clear off the CC&R's by itself.

>the question still remains: should I request congress to support my amateur

>eyes of their neighbors) because they are "special."

...But you are "special." You have been granted a federal license to engage in
an activity that an unlicensed individual can't (ignoring "third-party"
transmissions). Under the 10th Amendment, the U.S. Government has reserved the
authority to regulate [most] radio to itself - so where do the state and local
governments, or the people themselves have the authority to impose any law,
rule, regulation, or agreement which infringes upon your federal license? So,
it can be argued from the Constitutional point of view that the CC&R's weren't
valid for you to begin with - and I think PRB-1 got at that at least with
regard to the lower government laws, regulations, etc., ...

>I don't agree with it. I also don't think it's good publicity to challenge
>contractual agreements because of our interest in amateur radio. If I
>signed a contract, I don't then turn around and "come up with" a way to get

>restriction or neighborhood associations--and even take them to court on our
>own. Does the ARRL feel strongly enough about the CCR issue to allow use of
>ARRL Counsel? I hardly think so.

With not-so-recent events, it's not really "our" interest in amateur radio, but
the nation's interest. I have actually heard of a couple of situations
(completely hearsay and unverified) that in some local communities, the local
government wanted to set up a back-up communications plan with their local
amateurs, and those amateurs told their city/town to get lost unless they

revoke the citywide tower/antenna bans, etc., ... Guess what: No communications plan. However, in a real emergency, who is this town supposed to look to for help?....

>This did degrade, the last time around--and I was one of the folks who
>joined in--into an argument about whether Neighborhood Associations and/or
>deed restrictions were a good or bad thing. It would be nice to see a true
>debate about the true issue. Let's accept that Neighborhood Associations

>not; and yeah, they are overbearing--or not. The issue is: should special
>interest groups take issue against a contract they have signed? Was the
>ARRL right to spend so much time on this issue?

In my case, I signed no contract whatsoever, having inherited the property. Fortunately, the CC&R's had an "escape clause" which I promptly followed (but apparently many of the more modern written ones do not). The only issue I effectively has is that one of my four neighbors bordering my property doesn't want to see it, so I simply planted trees at the property line to shield his view of the antenna farm on my house's roof. The other three don't care and/or can't see it anyway. It's been 12.5 years since I became owner, and no one in the neighborhood has complained. I even have an 8.5' C-band satellite dish on my roof.

In my neighborhood, the CC&R's go as far as requiring permission to change the color a house is painted!

Add the assertion that the higher code speeds no longer serve any
regulatory purpose, the staffers said the hell with it. The FCC is
not in the business of handing out gold stars. The FCC's got bigger
fish to fry than to worry if high speed code is really necessary for
access to all of HF.

The commissioners set the general course and the staffers fill in
the details. Code speed is a detail. Even if the commissioners
even gave more than a few minutes of thought at ham radio.
Things like cellular phones, Howard Stern and TV attract
more attention. Aside from a few idiots (ex newbies who never
learned from newbie type mistakes), ham radio is fairly well
behaved.

No, I haven't assumed that at all. I pointed out that someone can be
directly in charge of you and still not be the commander who can
authorize amateur radio operation in a country. It doesn't matter
much. You didn't get written permission from anyone at all.

> Do I need to start counting cadence so you won't trip over your own

Just a couple of days ago, you accused me of a faulty memory about what I'd written concerning legality of operation vis a vis the DXCC desk. I know for a fact that you don't remember everything you've written. I surely don't accurately recall each thing I've written over the years. I have a reasonably good idea of the essence of the things I've written. For anything more detailed, there is Google (as evidence by):

You'll have to prove that you were authorized to operate, Brian. You can't do so because, as you've stated, you had only verbal permission. Maybe you can dig up your military commander of the time and have him issue retroactive permission.

For whether an operation will be accepted for DXCC credit or not? Yes.

>
> It would appear that Len is correct. You do view the ARRL as a
> quasi-governmental entity capable of authorizing amateur operations in
> foreign countries. Wow.

This is the part where you begin to be the real Brian. You read
something and draw an incorrect conclusion. The ARRL doesn't authorize
operations. The ARRL sponsors DXCC. The DXCC desk decides whether an
operation will be accepted for DXCC purposes. Where there is any
question of an operation's legitimacy, the desk may request proof of
licensing along with copies of passport entry or exit stamps and/or
visas.

<snip>"

It doesn't appear that I said what you attributed to me.

How many times must I tell you before it sinks in:

1) The DXCC desk (with advice from the DXAC) is the final arbiter on
what is accepted for DXCC credit.

2) (a separate issue) You have no proof of permission to operate from
Somalia at all *punto* unquote

Now, what was it that you were sure I told you?

What I really, really don't get...other than whatever financial experts might be able to explain, is why there are "cuts" for companies. C'mon. Enough is enough. It cannot be explained to me why it's beneficial to provide for corporations so that the working class can be protected and keep jobs.

>

Well, I do agree, but that is the bigger battle to win. Neighborhood Associations and CCRs are, apparently, not on the shortlist of pet peeves for a lot of people. Heck, it isn't for me, either *IF AND UNTIL* I went to buy property/home, etc. I think that given the popularity of CCRs and Neighborhood Associations, it would be a better battle to "go to the top" as it were--but it would be a much harder one. So, for me, it makes sense to decide whether or not I want to get involved with a battle like that (and I do not) or decide if I support an effort like the ARRL's venture to get this issue raised and taken care of in Congress. I don't think I want that--for a lot of reasons, explained in the first post. Namely, that a contract was signed--maybe even negotiated and signed--and it doesn't seem right to take that contract to task for my hobby I am involved with. I think to ask Congress to relax for amateur radio sets the precedent for other requests for Congress to relax--and I'm not so sure I want that much time taken.

>
> I would never sign a deal that included my
> not being able to put up antennas or anything else.
>

Absolutely. I am perfectly willing to do what I might have to not to be involved in something I don't want to be involved with. If it came down to it, and there were no other choice, then I'd grumble for a few days and get over it. But, I wouldn't be going to Congress--not for something like this.

>

Well, with all due respect, I understand and empathize with your comment. However, I am a fellow amateur. WE know antennas are beautiful (LOL). But, a car junkie probably figures all kinds of wrecks to work on are beautiful in his/her yard.

I just ended a two-year membership, or it will be ending soon. I think the ARRL is a needed organization, but it's not an organization for me. I just ain't into that part of it all that much--and it's way too much politicing to get and stay involved. I had that energy for it a few years ago, but I don't any more. HOWEVER, I'll speak for or against practices the ARRL undertakes just like I always have. I am now a potential "customer."

>
>You.

You'd better back up and reassess that one, Brainiac. The only "butter bars" I ever found a "commander" under were two and a half gold stripes (for a Lieutenant Commander) or thee full stripes (for a full commander) of the shoulder boards of a United States Naval Officer.

"Butter bars" rarely "command" anything above the platoon level and SURELY would not have the temerity to "authorize" anyone to operate a radio station of ANY service...EXCEPT, of course, the gay pagan chemical corps officer who thinks HE can lie at will...

Anything else is a by-product of YOUR overactive imagination.

Steve, K4YZ

Around here, I see no homeowner areas with any visible antennas, TV or
otherwise. Maybe they are low to the ground or something.

>
> The bill would simply require that ham antennas get the same consideration
as

>

Is this something not a lot of people know about? Like I said, I can cruise
any "new" or "newer" neighborhood here and the only thing I see
is--MAYBE--satellite dishes in the backyard or up on the roof. TV antennas,
sure, but is that the kind of antenna we're talking about? I don't see any
of the yagi-type TV antennas.

Then, let individual homeowners decide to challenge their contract--in civil courts or whatever. I don't have a problem with someone challenging a contract. My problem is in taking this issue to Congress, when there are probably much more important matters to be debated there.

> >
> >The bigger issue, as I see it, would be to challenge the deed

As I understand it, I would have to obtain the agreement of everyone affected by the Deed Restrictions that are with this "part and parcel" piece of land. I think that is the way to put it. Then, I would have to go to the County Courthouse and get a ruling.

> >
> >Does the ARRL feel strongly enough about the CCR issue to allow use of

> option for many people.
>

I don't agree that market conditions should be a determination of whether something is valid for debate in Congress or not. A person seeking to buy a house may want all kinds of other things not amateur related. Let them individually take that up with the Neighborhood Association or the neighborhood.

If "don't buy a restricted house" is not an option for many people, they join the many others who confront issues like this every day.

> Second, the mere fact that a "contract" was signed doesn't mean it cannot be changed at a later date. Contracts are renegotiated all the time - that's a big part of contract law.

And, so they can do it outside the Congressional venue.

> And a valid contract cannot violate a person's civil rights or the law. For example, deed restrictions that prohibit sale of a property to "non-white" people exist - and have been declared null and void by the courts.

But, no time was taken in Congress for this, right? The courts is where all this stuff needs to happen.

> Third, what is proposed is not a blanket preemption of all antenna restrictions. Rather, it would require reasonable accomodation. Big difference between a 90 foot tower with multiple beams and a G5RV in the trees, for example. Deed restrictions that prohibit all antennas are unreasonably restrictive.

Why not a ventenna? Isn't that what those things are called? It's my understanding that, for the most part, the "restrictions" of CCRs and Neighborhood Associations deal mostly with stuff that can be seen. Low antennas and wires, etc. cannot be seen. Well, wait, I am thinking down here, where there's a privacy fence in ever housing development. What's up there, Jim?

> And consider why such restrictions were put in the deeds. It's not about interference, because receiving antennas are included. It's not about appearance, because all types of antennas are prohibited, regardless of appearance. The real issue was to effectively force homeowners to sign up for cable!

Well, now that's an issue, then, that I definitely don't think belongs in Congress. Hey, cable companies suck...and they are a growing nusiance. But, once again, get the neighbors riled, get the public interest going, etc. If it's not a big issue for other people, then why should it be a big issue in Congress--where time is money and more important bills can be

debated.

>

Tell ya what. I think the average home around here (in a new neighborhood) is around $150,000. That's for, as the other folks say, just a house (I wouldn't mind at all being in one of those just a houses). If I am spending money like that, I am in control--no one else. I know you think I am being simplistic, but I am serious. If I don't get what I want when I am dealing, then off to Hell with the folks whom I am dealing with. I'd rather keep my money and eat steak every night before I go home to my apartment.

I start taking the old car for repairs, or I decide to learn how to do it myself. I'm telling you, I am the customer, and I am going to have it my way or no way at all. Too many people are letting things *happen* to them, and that's why they keep happening and while they'll happen more and more frequently. It takes the word, NO.

Yes. Or change their situation. Do not be governed by things that happen to you, make your own things happen. If he's a great doctor, then he can make tons of money and she can stay home and school the children, or vice versa. Hold off having kids until they've stashed away tons of money, leave the city, retire, and go have kids in some remote area--fast because remote is disappearing!

I'll give it a try ... if companies/corporations go down...under...as in
gone then you have no jobs. If no jobs...no taxes being paid....no money
being spent...etc.

To simplify.....'trickle down economics'.

Dan/W4NTI

Why don't you just switch off the radio and
go back to the West Memphis Greyhound
bus station, with a cooked knockwurst taped to your
left inner leg like you used to do back when
you usd to stir the shit on 14.313 Years ago, and
get you some of that nice dark-meat transvestite
"evening bootaye"..... If that don;t work try
the Warner Robbins Ga bus stop for some other
ham shitstain you need to ham-slam too.... ;)

> Half size G5RV is how big? (~52 feet)

Since you brought it up a 40M G5RV antenna might not be a bad idea in
Larry's case. It's shorter than a 40m dipole and the "matching
section" is only 16 feet long. It would only involve one wire per leg
(vs. several) and would give him 40, 20 & 10 plus 15 with a survivable
mismatch. Leave the 8X coiled up on the floor. Pattern & SWRs could
get interesting when ya fold it around the attic. I'd at least try it.
Out where the theory hits reality and it's only $25 from HRO.

> In a ham radio world where homebrew and home repair was as common as QRM,
> technical knowledge was essential to all hams.

Exactly. In many respects it was actually easier back then BUT ya had
to know what was going on under the hood. No such thing as plug 'n
play ham radio.

> But much of that is gone now, unless a ham is into specialized parts of amateur
> radio. Most of the ham gear manufactured in the past 15-20 years needs no
> tune-up, has a digital dial, and is pretty reliable and foolproof. Not much

Right on the money again.

>
> But the one area where almost all hams really need to know their stuff is
> antennas. Particularly on HF, where much misinformation is treated as gospel
> and where antennas often present the biggest challenge to amateur operation.

>
> So antenna knowledge is definitely a policy issue.

Agreed, sort of. Ya can pour heaps of money into the radios but if you don't have decent antennas ya wasted the money. Taking it further, if ya don't know how to homebrew antennas that work in difficult installation situations yer in trouble. Which today is more often than not the case. The answers are not in the question pools and HRO can't solve the problem of ducking around CC&Rs with stealthy antennas. Fer instance.

I agree again, The volume of entrenched flat out wrong folk lore about HF antennas is appalling at best. Makes it easy for the clues to tap the wallets of the no-clues. Lot more Brainiacs out there to pluck today than there were in days of yore.

The good news about antenna design is that you don't have to have to be an EE to get a respectable grip on the subject. As far as the math goes a bit of high school algebra & trig is all anybody needs and they don't need much of either. Beyond that some understanding of alternating current theory is needed and that doesn't take an Einstein to get into. I gave up even trying to keep up with equipment circuit design years ago when they went all solid state and became as complex as they are today. Antennas however are another whole story. A good working-level grip on antenna design can be obtained by simply starting at page one of the ARRL Antenna Book and carrying it through. One $40 book can get a ham more actually useful results than any desk full of pricey radios. Add some of the cheap and/or free antenna design software which is available now and anybody with any numbers sense at all can, with a bit of study, become the neighborhood radio club antenna genius.

Based on the dwindling percentage of hams who actually know the difference between a Coke and a Beverage there is a problem out there.

Is this a policy issue? Dunno, really. It's certainly another symptom of the dumbed-down syndrome.

From K4YZ
>>Great experience is arguable
>
> THAT was an opinion, Dr Shah.
The original poster said it was a great experience (for everyone). I said it's arguable. You said it's an opinion. So, you agree with me.

From K4YZ
>>"Took some effort" does not equal relavant.
>
> To him it IS relevent, Vipul.
The original poster was stating it "takes some effort" to represent amateur radio. That's why he put the statement in all capitol letters. The original poster was not talking about whether or not it was relevant to him.

Just because something takes effort, does not mean its relevant to amateur radio.

From K4YZ
>>>By the way - I heard a guy on 2 meters say "10-4" the other day. He caught
>>>himself and apologized...just wait till you start hearing that on HF!!!
>>
>>Irrelavant.
>
> To those who are concerned about the thinning out of the Amateur Radio
>gene pool, it is VERY relevent.

Gene pool?

From Mike H. - KC8UBH
>By the way - I heard a guy on 2 meters say "10-4" the other day. He caught
>himself and apologized...just wait till you start hearing that on HF!!!

Except for saying your call sign every 10 min, you can say what you want. Why should this person apologize for saying "10-4"?

From Mike KB3EIA
>I'd
>really rather not hear CB lingo. Its an awful reminder of what the bands
>*could* degenerate into if we're not careful.

"Reminder" does not equal band degenerate. Its only because you feel that way. You just hate CBers.

Lets keep all "lingo" to a minimum.

From Mike KB3EIA
>I'm not suggesting however that Code will keep that from happening. As long
>as the standards are high enough where it takes some work to get your
>ticket - I think we'll be fine.

Standards without relevance is not only wrong, it's dangerous. Just like when MCAS scores are used as higher "standards" to make certain politicians look good, rather than improve educational content. This same justification gives those that mastered the code higher technical license classes, since one must learn code to upgrade to higher license class.

Takes some work to get the ticket is fine. These standards should be relevant.

From KB9TMP
>Have a "Hammy" New Year!
Cute alterations of the word "ham" do not endear everyone. Just like regularly in QST when people see the word "ham" in various signs. It's weird.

In an ideal world, I fully support corporations paying NO
taxes whatsoever.

In order for this to work, the money has to go somewhere, such
as shareholders or the like.

So essentially, we (meaning you and me) will need to earn a
good bit of that money that the corporations are saving.

Because WE would have to support a big tax increase for
ourselves. The bills don't go away, and deficit spending only works
for a short while.

I think you have.

I pointed out that someone can be
> directly in charge of you and still not be the commander who can
> authorize amateur radio operation in a country.

A commander has ucmj authority to courts martial and/or non-judicial
punishment. I'm fully aware of what a commander is.

And a commander has the authority to give permission to a subordinate
to operate amateur radio in Somalia, a fact which you said was wrong
wrong wrong.

Apparently you're still missing the point.

It doesn't matter
> much. You didn't get written permission from anyone at all.

I can tell. Too much time and distance to discern what a commander is
or is not.

> It doesn't appear that I said what you attributed to me.

Military members move between countries often without passports,
entry/exit stamps, or visas. Based upon your wisdom, Operation
Restore Hope never happened.

You continue to assume that if the ARRL DXCC doesn't accept an
operation that it is illegal, aka bootlegging, aka Mog Slim.

You've used all three descriptors.

Yet you are not the Somali government, you are not a military
commander, you are not the U.N., you are not a world court, and you
are not the FCC. Yet you declare my operation illegal. You have

unimaginable powers. Who/what are you again?

Because you don't -think- DXCC will accept it.

Steve:

I use 10-codes every single day on the job, and I have nothing to do with CB! While doing so, I don't seem to lose my ability to use the Morse code, even I'm not using it at the time! So what does the use of 10-codes ANYWHERE have to do with dispensing with Morse code testing?

BTW all my best to you and Kim! Just don't name anything after me!

>eyes of their neighbors) because they are "special."

That depends. Activities like Amateur are definitely in the public interest,
whereas junkyards in residential areas are not. You have to compare
apples to other apples.

>I don't agree with it. I also don't think it's good publicity to challenge
>contractual agreements because of our interest in amateur radio.

We're just challenging the legal basis upon which these contractual
agreements are based, and creating exceptions for an activity which is
proven to be in the public interest. I see nothing wrong with that.

>If I
>signed a contract, I don't then turn around and "come up with" a way to get

And, as usual, you're not making any more sense this time than you
did before.

>It would be nice to see a true
>debate about the true issue. Let's accept that Neighborhood Associations
>and deed restrictions are present and here to stay.

We're not saying we want to do away with them. We just want changes made
which provide "reasonable accommodation" to Amateur Radio operators.

>Yeah, they suck--or
>not; and yeah, they are overbearing--or not. The issue is: should special
>interest groups take issue against a contract they have signed? Was the
>ARRL right to spend so much time on this issue?

The answers are yes and yes. If the ARRL, through it's legislative efforts,
manage to get a universal change made which allows for reasonable
accommodation of Amateur Radio stations in restricted residential areas,
then you are by no means required to take advantage of them personally.
However, the rest of us certainly will! For me, it will mean being able to
spend my own money on my own home and get out of this apartment!
With all the static you've given me over my apartment dweller status in
recent times, I should think you'd be all in favor of this!

Mike:

To the best of my knowledge, there is nothing illegal or improper about using "10-codes" on VHF/UHF repeaters. The only possible problem would be that 10-codes tend to mean different things in different places, and on ham radio, would not be as universally understood as "Q" signals -- which only have one meaning anywhere they are used. For instance, if I was talking to you on 2-meters, and said I needed you to "10-100," what would you do? How about a "10-21?" Or a "10-10?" These 10-codes mean specific things on my company's radio system, but I've not heard them used much (if at all) anywhere else. However, having said that, certain 10-codes like 10-3, 10-4, 10-7, 10-8, 10-9, 10-19, and 10-36 seem to have pretty consistent meanings. Therefore, I would not question their use on a ham radio repeater. Anyone who would is only playing "radio cop" and would be better off to mind his own business.

Now, as usual, it's time for Kim to chime in with some typically puerile remark.

73 de Larry, K3LT
I'll be 10-7 for the evening.

The ARRL has worked around the regulations with respect to the Morse
Code exams. The so called 5WPM Morse Code exam currently administered
is really a 13-15WPM Farnsworth exam. Slight of hand, shell game,
whatever you want to call it, but its not a 5WPM Morse exam as
required by Part 97.

>is--MAYBE--satellite dishes in the backyard or up on the roof. TV antennas,
>sure, but is that the kind of antenna we're talking about? I don't see any
>of the yagi-type TV antennas.

Here's the short version:

Back about 1970, various cable companies made sweetheart deals with developers. The developers put "no antenna" clauses in the deed restrictions, and the cable folks wired the developments for cheap, or even free. This was back when cable service was cheap and many cable channels were commercial-free.

After a few years, the no-antenna clauses became part of the boilerplate and were included in almost all new development construction. People in those houses used rabbit ears or cable.

Then along came the "pizza dish" direct broadcast satellite (DBS) folks, with a wireless alternative to cable. Just put the little gray antenna where it can

see the satellite and watch all kinds of great stuff for less than the cost of cable!

Only problem was, much of the potential DBS market was in areas that allowed no outside antennas at all. And the little dishes don't work indoors - they have to have a direct line of sight to the satellite.

After a lengthy legal battle that included the Supremes, it was ruled that the no antenna clauses were unreasonably restrictive, and the FCC preempted them. But the preemption is for broadcast TV reception antennas ONLY - nothing else, not even FM radio!

End result is that a person living in a house with a "no antenna" deed restriction can put up a pizza dish satellite antenna or a VHF/UHF TV yagi antenna or almost any other reasonable antenna IF it is needed for good TV reception. And they don't need to go to court or fight any sort of legal battle to get the preemption.

ARRL and others have tried to get FCC to extend the preemption to ham antennas, arguing the same way the DBS folks did. FCC said they would do the preemption thing if and only if Congress told them to. If HR-4720 is passed, FCC will consider itself "told by Congress" and will extend the preemption to ham antennas. That's why the bill is needed.

Doesn't work that way with deed restrictions.

>I don't have a problem with someone challenging a
>contract. My problem is in taking this issue to Congress, when there are
>probably much more important matters to be debated there.

FCC has told us that the way to challenge these contracts is to get Congress to pass a bill. Because radio is federally regulated, it has to be Congress that does the job.

Restrictive divorce laws kept a lot of folks married against their will until the laws were changed by the state's equivalents of Congress.
>

Kind of like getting everyone you know to sign a petition so you can get a divorce.

How much chance do you think there is of getting everyone to agree to such a petition? Particularly in an area where the parcel might be 100 or more housing units?
>

Why? Real estate has special laws because it is not like other property. Radio
has special laws because of its very nature.

>A person seeking to buy a
>house may want all kinds of other things not amateur related. Let them
>individually take that up with the Neighborhood Association or the

>> property to "non-white" people exist - and have been declared null and
>> void by
>> the courts.
>
>But, no time was taken in Congress for this, right?

WRONG.

It took the various Civil Rights Acts and other legislation to make it happen.

It used to be perfectly legal for realtors to not show or sell houses to the
"wrong" people for a neighborhood. "Wrong" as in wrong race, wrong religion,
wrong nationality/ethnicity. It took fair housing laws enacted by Congress -
not the courts - to end that sort of discrimination.

>The courts is where all this stuff needs to happen.

See above.
>

You tell me.

>It's my
>understanding that, for the most part, the "restrictions" of CCRs and
>Neighborhood Associations deal mostly with stuff that can be seen.

Nope. In my experience, no antennas means no antennas, period.

>Low
>antennas and wires, etc. cannot be seen.

They also don't work.

>Well, wait, I am thinking down
>here, where there's a privacy fence in ever housing development. What's up
>there, Jim?
>
It varies all over the place. Some areas are wide open, with no fences or trees
(landscaping must be approved by The Association, doncha know?). In others,
it's more private. But the practical result is that all it takes is one Gladys
Kravitz type to make life heck - and it doesn't have to be a neighbor.

>> And consider why such restrictions were put in the deeds. It's not about
>> interference, because receiving antennas are included. It's not about
>> appearance, because all types of antennas are prohibited, regardless of
>> appearance. The real issue was to effectively force homeowners to sign up
>>for
>> cable!
>>
>
>Well, now that's an issue, then, that I definitely don't think belongs in
>Congress.

Why not? Congress enacts the laws that regulate the cable companies. Do you
think Congress intended for cable ops to have a monopoly?

>Hey, cable companies suck...and they are a growing nusiance.

Maybe where you are. Around here, they are pretty decent - they have to be.

>But, once again, get the neighbors riled, get the public interest going,
>etc. If it's not a big issue for other people, then why should it be a big
>issue in Congress--where time is money and more important bills can be
>debated.

Because Congress is the venue that has the power to do the job.

[expletive deleted]

>with the folks whom I am dealing with. I'd rather keep my
>money and eat steak every night before I go home to my apartment.

??

You must deal with someone in order to have a home. If it's an apartment, you
ust deal with the landlord. If it's a home, you must deal with the real estate
laws and restrictions. That's just reality.
>

Fine - except the reason you are buying a new car is that the old one can't be
fixed.

>I'm telling you, I am the customer, and I am going to have it my
>way or no way at all.

Then in many cases you won't have a car or a home.

>Too many people are letting things *happen* to them,
>and that's why they keep happening and while they'll happen more and more
>frequently. It takes the word, NO.

Which is why people are petitioning Congress to pass HR-4720. They are saying
NO to unreasonable restrictions. They're making things happen and promoting
change of a bad situation. That's a good thing.
>
>> (end hypothetical situation)
>>
>> Not everybody can move to areas where there are no restrictions. Here's a

> This may include statistical failures,

Those are legitimate engineering functions. So is sales work by the
way. The three highest paid categories of engineers are sales types,
patent attorneys and MBAs, not designers by a long shot.

> fixturing, soldering, ordering parts,
> maybe some troubleshooting.

Engineers are paid to get the job out the door and do whatever it
takes to make that happen. Been there, done that.

>
> This work may be higher skilled or LOWER skilled than a technician (yet they
> want someone with a BSEE to do the job). Also, it is getting common to append

Two of my favorites are "sanitation engineers", the dweebs who pick up
yer trash on Tuesdays and Fridays. The other real gooder is "systems
engineers".

> I am digressing, but it should be noted that it is very common for people with
> BSEEs to do the lackey work.

Been there, done that. Not all engineers who are hams are EEs by the
way. Rumors to the contrary.

> >Now if the above ARRL credentials were worth college
> >credit that you could apply towards a real college degree,
> >then it would be worthwhile.

Will never in this world happen, that's so far past the ARRL mission
it's beyond moot.

>

> >And most companies that do such design work will require college
> >degrees.
> Naturally, design is the most desired work. Few people with BSEEs actually do
> design work.

I don't agree with that. I know a flock of EEs most of whom work for
small to medium size companies or for themselves as
designers/consultants. Every one of 'em does volumes of design work.
Those EES who don't do design work are, for the most part minions in
large corporations or the gummint. 90% of this country's payrolls are
doled out by the owners of small to medium size businesses, you figger
the rest.

> Certifications in the specific area may help you obtain a higher
> level than otherwise.

Not in engineering it doesn't except in very isolated cases. You
either have a BS or you don't. From there you either have an MS or you
don't. One more jump up and you have a PhD or you don't. Somewhere in
the mix you also picked up a PE license or you didn't. The schools
where you picked up yer paper also matter. It's all very digital. The
rest involves identity crises and the eternal hunt for a cheap & quick
ways out.

...if one assumes that two lines on the ARRL web page are the sum total
of knowledge and information on the subject.

> Apparently you're still missing the point.

You don't have a point. You have no commander willing to stick his neck
out and say that he gave you permission to operate. You have no
paperwork stating that you had permission to operate.

> > It doesn't matter
> > much. You didn't get written permission from anyone at all.

> or is not.

I don't need to recognize a commander. I've had proper written
permission every place I've operated. Each operation was credited for
DXCC.

You, on the other hand...

> > Restore Hope never happened.

The DXCC desk is familiar with how military members travel. They'd
understand how you wouldn't necessarily have a visa, entry or exit
stamps or even a passport. They wouldn't understand how you'd have no

written document authorizing you to get on the air from Somalia.

> You continue to assume that if the ARRL DXCC doesn't accept an
> operation that it is illegal, aka bootlegging, aka Mog Slim.

You just can't be that dumb. I've clearly separated the idea of
legality of operation from DXCC acceptance in any number of posts.

> You've used all three descriptors.

Mogadishu Slim can cover both 1) illegality of operation and 2)
non-acceptance by the DXCC desk for credit. I feel comfortable in
calling you "Slim" because you fit in both categories.

> Yet you are not the Somali government, you are not a military
> commander, you are not the U.N., you are not a world court, and you
> are not the FCC. Yet you declare my operation illegal. You have
> unimaginable powers. Who/what are you again?

Let's do it again. I'm a guy who knows you have no paperwork
documenting your operation. It really doesn't require much in the way
of powers.

> Because you don't -think- DXCC will accept it.

I already KNOW the DXCC desk won't accept it without documentation.
There's only one way for you to put that to the test. Have someone
submit one of your QSL cards for T5 credit on his DXCC. Then stand back
and see what happens.
Oddly enough, in all the time which has passed since your supposed
operation, not one single individual has ever submitted a T5/N0IMD card
for DXCC credit.
That is really quite odd.

I think you might be getting the hang of it. Yes, the things which are
accurate statements are true. Those which are inaccurate are false.

> > > > > Him putting it in writing doesn't make it any truer.

Right, 'cuz you're still the same.

Because if you don't give them cuts they fly off to Mexico and make it
with lots cheaper labor costs, and you lose the American jobs. Since
NAFTA there hasn't been a good reason for a company not to take
a run for the border. Ask General Motors after they started making
Buicks down in old Mexico. BTW just a little added bit of info, if your
GM car has a 1 at the begining of the VIN number it's US made. The
number 2 is Canada, 3 is Mexico, J is Japan, and K is South Korea.

Are you out to rain on everyone's parade? If you don't like
ham radio the way it is. If you don't like ham radio operators
the way they are. Why are you a ham at all? It seems like you
are trying to change everyone to your version of radio. I started
doing the "Hammy" line because everyone else was saying
Happy New Year, and I thought I'd be a little different. If you
got your way my daughter when she was 2 years old would
have been chastised for saying "Happy Two Ears"!

V why don't you just chill out. You are the ONLY one in
here that has said anything about my little tag line. Even Bruce
who hates everyone and everything didn't say a word about
it, JUST YOU!

Years ago when I did play with CBs I would have walked to the bathroom.
We were in a truckstop one night and one of the guys said he had to go
10-100. The guy who was behind the counter ask real excitedly where the
10-100 was at. Come to find out he was a retired cop and the dept. he
was on used that number for a homicide.

I use 10 codes and Signals around here all the time. But
when your on the fire frequencies or Emergency Management
frequency they expect it, and will tell you about it when you
DON'T use them. 59-605 is 10-42*

I never thought of it that way. That is like Indiana's scanner
law. It's illegal to carry a scanner in an auto in this state, except
for licensed ham radio operators who are exempt. I think your
onto something there. Since the FCC which is a federal agency
and it gave me the radio license, that makes me exempt from
state or local laws that would infringe on my federal rights
granted by them in issuing my license.

Is it a CB arguement? Or is it a relation to public service agencies have been using the 10codes as well as other terminology alot longer that cb'ers....? I slip up from time to time using terminology from my employment in emergency services..... for instance instead of copy or QSL, I have twice used (and quickly corrected) the term 10-3 or "message recieved." Work in a law enforcement capacity as well as a member of a On-call fire department as well as being a ham, sometimes this type of thing does happen.

Good idere Dan,

Gee, We should probably start cleaning up the mess on HF and actually start using those bands from 10M up to 23cm more before we claim a need for the 5Mhz allocation potential. With over 100Mhz of frequencies from 28.000Mhz-1290Mhz, the usage doesn't justify the amount of frequencies allocated. Maybe things are different where you are at, but around here, things are quiet.....

As far as the HF thing, between the incessant contesting going on as well as some of our "finer" hams making excellent examples of the ham community, (look at some of the BS occuring in R.R.A.M.) I guess that would be another point we need to address.

We definitely need to "clean house" a bit before asking for more...

A question (possibly for debate) on yes, morse code, not CW, is why did they chose when they did, the 5, 13 and 20wpm test rates? Why not 4 or 6, 12 or 14, or 19 or 21 respectively, what was so magical about those particular numbers? I can see the 5 and 20 from a mathmatical standpoint, but the 13 I can't see, why did they not go with either 10 or 15 as the middle code test requirement?? Just curious...

Perfectly well aware of all that, Larry. I would find their use
disconcerting if I began hearing them often. I'm hard pressed to believe
that many Hams would appreciate their usage either - if ONLY because of
their negative connotations due to their association with CB.

Yes - 20 years ago I had a CB because it was instant gratification. As I
got older and became less afraid of some good-old-fashioned hard work, I
didn't mind at all doing some learning and taking some tests.

Morse Code is pretty neat and despite what V has to say about it, it is a
pretty lively corpse (as others have noted) that isn't going to "die"
anytime soon - certainly not in my lifetime.

If V wants to work HF as badly as I do - he'll learn...kicking and screaming - but he'll learn!

>> THAT was an opinion, Dr Shah.
>The original poster said it was a great experience (for everyone). I said
>it's
>arguable. You said it's an opinion. So, you agree with me.

Ah ah ahhhhh! Don't get caught telling fibs, Vipul! The original poster saud NOTHING about "great experience for everyone"...! THOSE are YOUR words, Sir! Shall I requote his specific comment here for your edification?

QUOTE:

I'm glad I studied it. :) Even if I never use code again after I upgrade, it was a great experience I wouldn't trade for anything.

UNQUOTE

The author SPECIFICALLY STATED "I" three times...Not once did he make ANY inference that it was a "great experience (for everyone)"

>Just because something takes effort, does not mean its relevant to amateur
>radio.

Sure it does. The expenditure of the time, effort and talent make it VERY relevent. Morse Code proficiency are STILL important to Amateur Radio on several levels.

That it is not important to YOU is YOUR opinion.

>>To those who are concerned about the thinning out of the Amateur Radio
>>gene pool, it is VERY relevent.
>
>Gene pool?

Yes, Vipul, "gene pool".

>Except for saying your call sign every 10 min, you can say what you want. Why
>should this person apologize for saying "10-4"?

Because when it starts sounding like a parody of a 1970's era trucker movie, it is time to stop. Better yet to never allow it to stop.

Ironic, isn't it, that you spend sooooooooo much time "dissing" Amateur Radio operators for the use of what you call "codewords", yet you jump to the defense of the use of the yen code on Amateur Radio allocations..?!?!

>>I'd
>>really rather not hear CB lingo. Its an awful reminder of what the bands
>>*could* degenerate into if we're not careful.
>
>"Reminder" does not equal band degenerate. Its only because you feel that
>way.
>You just hate CBers

How do you come to the conclusion that because someone does not want to hear CB-radio type lingo on Amateur Radio that they "hate CBers"..?!?!

I don't like CB lingo on Amateur Radio either, but I don't hate CBers. I USE CB radio from time to time, and on 11 meters I say "10-4" if it's use is in context of the transmission. (No, I do not use "roga-dee", "negatory". "what's the 20?", "good buddy" or other "CB" specific slang)

>Lets keep all "lingo" to a minimum.

Why? Because YOU don't understand it? Have fun tryng to convince the other estimated 10 million CB and Amateur users in the United States, not to mention internationally.

>From KB9TMP
>>Have a "Hammy" New Year!

>Cute alterations of the word "ham" do not endear everyone. Just like
>regularly
>in QST when people see the word "ham" in various signs. It's weird.

His "alteration" of the word "ham" is not what is wierd in this forum, Vipul. Your lack of undersanding of the American use of the English language is.

Steve, K4YZ

During my days in professional broadcasting, it never ceased to
amaze me how virtually all ham radio operators believed the
sole function of the FCC was to regulate ham radio. Those of us
who worked professionally in communications, as well as holding
ham tickets, found this amusing!

> sunspots go away.

From a dxers perspective working split is a good idea, phone, cw, 40
or anywhere else. Particularly on the low bands the dx is usually weak
and gets buried in the piles when running transceive. So nobody works
the guy and he gives up and goes away. Let me count the times . . You
might notice that most of the expeditions always run split for this
reason. I'm all for the dx having phone privs on freqs below our band
limits. God bless dual VFOs.

There is also a fairness issue involved, the dx is much more likely to
be able to work other dx in those segements without getting hounded
and pounded by the U.S. hordes.

> 5 MHz looks like the best hope right now.

60m for us has been put on hold for now but it's moving forward in
other countries. There are Canadians working Brits on 60m right now
and the Germans are likely to join the party. It's only a matter of
time for us.

>
> Is this a serious enough policy discussion for you? It's still phone ops v
> CW ops, though, or at least someone will turn it into that within the next
> two posts!

If phone was permitted to the lower band edges most of the bitching
would come from the phone ops, not the cw and digital ops. All the cw
& digital ops have to do is engage their narrow filters and there goes
80-90% of the energy in a phone signal and away the beepers go like
the phone signal isn't even there in a large number of instances.
Happens all the time on 40 when it gets down to the beepers vs. the
broadcast stations.

> required by Part 97.
>

If you want to and take the time to arrange it ahead of time with the VEs, you can have a test at the 5wpm character speed rather than the Farnsworth but doing it that way is much harder. The letters come so slowly that there isn't enough space between the letters for the mind to have time to react when you are a beginner. With the Farnsworth type, the examinee has time to think between letters. He/she hears "di dah dah" followed by a space long enough to think "oh yeah, that's a W". On the other hand when it is "diiii daaaah daaaah," he/she doesn't have any time to think before the next letter but must immediately respond "W" so as not to lose the beginning of the next letter. Of course as a person continues to improve, they simply respond and don't have to think about the letters but even that is easier and faster to do via the Farnsworth approach.

Learning and testing using the Farnsworth approach is MUCH easier.

>were like 160 years ago!!!

A good book on the subject is "The Victorian Internet", about the development
of the telegraph and its effect on society. If you think radical technological
change is just a 20th-21st century thing, consider that the communications
options available to President Andrew Jackson and Julius Caesar were almost
identical. But by the time Lincoln became president, practically instantaneous
electrical communication across the country and under the sea was commonplace.

Don't hold your breath! Besides the code test changes back in 2000, FCC reduced
the number of tests and the total number of questions. Less written testing as
well as less code testing.

>> > When its as easy to get
>> >your General as it is to get your Tech - HF is going to get really

Yup. "Handle" is actually very old jargon for "first name". CB took it and
redefined it as "nickname used to obscure the identity of its user".
>
>I personally find it disconcerting. The guy really did apologize but I'd

>ticket - I think we'll be fine.

Entry standards are only one part of the picture. Enforcement by FCC is
another. Non-tolerance of violations is yet another part.

I'm not really sure but I have seen it mentioned that there is a "barrier" at 10wpm. At this speed, one can still "count" the dots and dashes and relate to a letter. Just above this speed, one must act on reflex. So this may be the reason for not having chose 10wpm as one of the levels. Perhaps 13 is the lowest speed where one must copy on reflex.

Caveat: The above is speculation on my part.

Though in practice, I find that there isn't a significant difference between 13 and 15. However I do notice the difference when it goes above 15.

Although the examinee answers fewer questions to get a license, the question pools are larger. For example, the new Tech pool covers all the material that used to be covered in the Novice and Tech pools. So one still has to study just as much material as before. The new Extra pool now covers all the material that was in the old Advanced and Extra pools. So again the examinee mus still study just as much as before.

When I operated I had permission. I'm no longer there. My commander
is no longer there. I no longer sign "portable T5."

What more do you want?

You were never in a situation where a commander had the authority to authorize amateur operations. You have no experience in such matters. You even went so far as to say that commanders cannot authorize any amateur authorizations.

It was me who has provided you with such an education.

I see you talking about the DXCC desk again. I don't see you mention
any other "authority."

> > You're learning, but only slowly.
>
> Don't just stand there mumbling to yourself, DO something.

I have no proof that I was authorized to drive equipment up to 5 tons, motorboats up to 27 feet, etc. But I did. And it was legal.

Oh gosh, now what?

Are you going to give me a retroactive no-ops citation?

I find that I'm making noticeable progress about every 4 days or so -
miniscule - but enough that I notice.
>

learning.

Not so sure - I don't think that I'll ever be able to see code in my head
like he does, "like a ticker tape", because I know my memory doesn't work
that way. Example - I can add in my head fine, but give me 3, 2 or 3 digit
numbers to add together and I'll end up forgeting what one of them was.

Yup, and we've totally forgotten the AWESOME feat of laying the first trans-atlantic cable. (By the way - how did they overcome resistance in 2000 mi of cable? On land, they had "repeaters" - batteries, basically - every 50 mi or so.)

Yeah. If Vipul just sat down and devoted about 10 minutes a day for a month, I bet he'd change his opinion. BUT - I'm NOT saying I'll actually use it. I want to see what happens in the next week. I take the test on Jan 11 (same across the country I think).

Well...2 meters is certainly full of self-appointed "enforcers" - and most of the time, I think their interpretation of our rules involve a lot of straw grabbing - but I'll save THAT conversation for a different thread.

That's obvious. The ARRL certification programs are for certs on
specific narrow subjects like emergency ops, antenna modeling, etc.
which have nothing do do with "basic materials". In fact they're well
beyond the basics. The info is in the ARRL website.

Amen. Every time something comes up which Brainiac can't do, didn't do
or won't do there's an excuse. Some folk are into contesting, some are
into digital work, some are experimenters, his specialty in the hobby
is excuses published in RRAP.

Funnily enough, I haven't noticed any such thing. Most DXpeditions seem to
operate without using split, at least on phone. I wouldn't object to them
using split atall, but that's a different issue.

> I'm all for the dx having phone privs on freqs below our band

But on 40 we have no common frequencies!

That's indefensible, and quite different from having a small 'no-US' zone.

> If phone was permitted to the lower band edges most of the bitching
> would come from the phone ops, not the cw and digital ops.

Nobody wants phone all the way to the lower band edges - just something more like the rest of the world have. Well, actually in most countries you can operate phone to the lower band edge, but people don't, they follow their bandplans, albeit those are very different from the ARRL's. The Region 1 bandplan allows phone down to 3.63, 7.045, 14.112 and I forget exactly where on 15m (used to be 21.15, but I know it was changed), and their 80 and 40m bands only go up to 3.8 and 7.1.

All I actually asked for was phone from 7.075-7.1, which I really don't think is unreasonable, but I should ask the FCC, not Usenet!

Since you bring it up, most of the bitching now is from DX phone operators who have to put up with the bleeping of US digital and CW ops in their phone subbands, so in that sense you are partly right.

What are the dimensions of your loop, how high is it and how effective
is it on rcv vs. other 160 rcvng antennas you've used?

A year ago when I was recovering from some nasty surgery I stayed at
one of my brothers' places. Four acres of ancient hardwoods. I'd
previously managed to get 475 feet of "random wire" up around 40 feet
and got on 160 for a couple weeks. First time I've ever managed to get
on 160. What a beautiful place to do ham radio. The band that is.

Tnx.

Message-ID: <f45722ac.0301031813.20c6a139@posting.google.com>
Source record: 59291

Who was it that was so opposed to W5YI charging $5 for license reneals?

From the ARRL Letter, Vol 22, No 01

ARRL PROVIDING FCC LICENSE RENEWAL, ADDRESS CHANGES, MODS TO NONMEMBERS

The ARRL has announced that it's now providing FCC Amateur Radio license renewals, address changes and other license modification services to nonmembers. For a $12 fee, the League will renew a nonmember's Amateur Radio ticket (the license must be within 90 days of expiration), file an application to change address or name or request issuance of a new sequential call sign. The ARRL Volunteer Examiner Coordinator is processing these applications.

"The $12 is in line with our calendar year 2003 exam application fee," said ARRL VEC Manager Bart Jahnke, W9JJ. For several years, the ARRL has been handling renewals, address and name changes and modifications free of charge for members and has directed nonmembers to the FCC's free Internet or hard-copy application options or to other providers of such services.

Jahnke suggests that nonmembers who now choose to employ the League's application handling service also consider adding $27 (based on the current under-65 full term member rate of $39) for a full ARRL membership that includes free application handling and other services--not to mention QST.

Members or nonmembers taking advantage of this service should submit NCVEC Form 605 <http://www.arrl.org/fcc/forms.html> to ARRL VEC, 225 Main St, Newington CT 06111 USA for processing. Nonmembers should make the $12 fee payable to "ARRL." For more information, contact ARRL VEC, vec@arrl.org.

Why not? CW is supposed to be a lot of fun, and by first converting
all the Q-signals to longhand, then converting them to phonetic
alphabet, you can make your fun last even longer. With all that fun
practice, you'll be up to 50baud in no time.

They are very understanding people. So why did you bring up
passports, entry/exit stamps, and visas?

> They wouldn't understand how you'd have no
> written document authorizing you to get on the air from Somalia.

So where there -is- a formal mechanism in place to track travel from
one location to another and the documentation is lacking, the DXCC
desk forgives the lack of documentation.

But where there is -not- a formal mechanism for operating from a
location without a government, the DXCC desk is a stickler for
documentation.

I see.

> > You continue to assume that if the ARRL DXCC doesn't accept an

Only because I've called you on it. It was your first tactic. You've
since changed because your position was untenable. Even the amoeba
moves away from an electrode.

> > You've used all three descriptors.
>
> Mogadishu Slim can cover both 1) illegality of operation and 2)
> non-acceptance by the DXCC desk for credit. I feel comfortable in
> calling you "Slim" because you fit in both categories.

And your documentation is...?

You said:

"...and you have yet to provide any evidence that your operation was
legal, accepted for DXCC credit or that it ever took place at all.

Dave K8MN"

So without any evidence or documentation, you declare me a bootlegger.

You're a helluva guy.

> > Yet you are not the Somali government, you are not a military
> > commander, you are not the U.N., you are not a world court, and you
> > are not the FCC. Yet you declare my operation illegal. You have
> > unimaginable powers. Who/what are you again?
>
> Let's do it again.

Yes, let's do it again. Which of the above are you? The Somali
government, a deployed military commander, a U.N. official, the world
court, the FCC?

I'm a guy who knows you have no paperwork
> documenting your operation. It really doesn't require much in the way
> of powers.

You mean that you have absolutely nothing? Then you call me a
bootlegger without knowing if I even made a transmission?

What a leap of faith you've made.

> > Because you don't -think- DXCC will accept it.
>
> I already KNOW the DXCC desk won't accept it without documentation.

> That is really quite odd.

Yes, it is. Perhaps the world's hams aren't all DXers as you would
have us believe.

Sure I was, Brian. I was in Vietnam '70-'71.

You have no experience in such matters.

Darn it, you're wrong again.

> You even went so far as to say that commanders cannot authorize any
> amateur authorizations.

Darn--wrong again. Where'd I say that?

> It was me who has provided you with such an education.

Sure you did, Brian--in your mind.

Your memory that short? The same guy you refer to several lines above.
The one who e-mailed the info about his operation. The one who was
spotted numerous times on packet during his operation. That guy.

> > > > > > > You must have assumed that it wasn't

I have written licensing documents from each place I operated. All my
operations are accepted for DXCC credit. My operations are therefore
not in question.

You told us that you made QSOs. You have no proof that you were
authorized to be on the air from Somalia. If you told us that you had
QSOs and you didn't, you move from bootlegger to liar.

> What a leap of faith you've made.

It isn't much of a leap, Brian. Didn't you think anyone would check out
your story?

> But on 40 we have no common frequencies!

So what?? It's just part of the game. You're either a real dxer or yer
not. You either jump the hurdles of you don't. You oughta been there
when phone wasn't permitted by *any* U.S. ops below 7.200. I have no
idea today how many 40m ssb dxcc cards I have from that regime but
I'll bet it's at least pushing 100. And you're all bent outta shape
because you can't yak down to 7.075? Bwaaahaha! Apply for a disabilty
waiver.

> > If phone was permitted to the lower band edges most of the bitching

No, I presented them as two distinct populations. You have yet to
show documentation that either one embraces DXCC as the world
standard.

David, you need to come up with something new.

Sorry, but you'll have to be more specific. There were a number of
amateurs operating from Somalia during our operations there. I knew
only one other.

> The one who e-mailed the info about his operation. The one who was
> spotted numerous times on packet during his operation. That guy.

Nope. I was gone when that amateur was there.

I know that there are numerous non-hams with visas and entry/exit stamps
in their passports. I don't know of any of them attempting to prove to
the ARRL's DXCC desk that they were operating an amateur radio station
legally from an exotic spot.

Whaddya want to be, Brian? Bootlegger? Liar? Which of your scenarios
is correct? Are you now telling us that you had permission but that
your earlier claims of making QSOs and sending QSL cards from Somalia
were false?

> > > What a leap of faith you've made.
> >
> > It isn't much of a leap, Brian. Didn't you think anyone would check out
> > your story?
>
> And your findings are?

That others operating from Somalia during the same time frame had
written authorization. That the DXCC desk has never had a single
submission for DXCC credit of a T5/N0IMD QSL card in spite of the fact
that you've told us that you made QSOs and sent QSL cards.

> > > > > Because you don't -think- DXCC will accept it.

> standard.

Why would a non-DXer embrace any DX awards program as a standard? As to the world's DXers--simply ask a few or ask many. Ask the DXCC desk about the number of non-U.S. hams who have applied for the award. Again, you've attributed to me a statement which I did not make.

> David, you need to come up with something new.

We need to take care of old business before new business is introduced.

You asked for something which says I'm not a liar. I provided it. If
I'd been in your shoes, I'm smart enough to have gotten written
permission. If you'd had it, no one would be laughing up his sleeve at
your claim.

226. Exam credit

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-04 18:20:41 UTC
From: Some One <someone@nowhere.com>
Message-ID: <3e1725f9_4@corp-news.newsgroups.com>
Source record: 59310

I became a novice in June, 1983 and upgraded to Tech in November, 1983. I have my original novice license with an "Interim Amateur Permit", FCC Form 660-B dated November, 1983 attached. I also have my current Tech Plus license effective April, 1997. It's obvious to me that I would get credit for elements 1 and 2 with a current Tech Plus license from 1997. I'm curious if the Interim Amateur Permit will be enough to get credit for element 3. I think it should since 1983 was before the VE program and element 3 was required for both Tech's and General's. I read through part 97.505 be it seems to me that the Interim Amateur Permit falls into a gray area.

Thanks!

You overstate the case to the point of absurdity. Such a bill would not
make CC&Rs "useless".

The bill would affirm that the US Government has an over-riding interest in
the necessity that federally licensed radio stations be allowed to construct
antennas reasonably adequate to perform the services they are chartered to
perform. Simple PICON stuff.

Nope. The "defining authority" is the FCC. ARRL VEC may be able to give
good advice.... period.

Contact the ARRL VEC and ask the question to the experts there. While it seems like you would be covered, they are the defining authority. Do you have a copy of your Technician license from that period?

I don't know if I still have a tech license from then, if I did there
wouldn't be any question in my mind about what exams I would have credit
for. I looked in the obvious place and posted my original message based on
what I had there.

Wrong! 47 CFR 15 aka "Part 15" - intentional and unintentional radiators.

The FCC doesn't LICENSE receivers, but there are still regulations. :-)

No, it is not. It lacks evidence to show that you had an actual license grant
of technician before the magic date in 1987.

However, the ARRL VEC is the defining authority over whether or not an ARRL VE team should accept this "questionable indication" without other proof. Although he can't speak for the other VEC's, aren't the plurality of VE teams under the ARRL VEC?

Well they are defining in the sense that FCC has given them and the other VECs the power to determine if the applicant's documentation meets the requirements of the FCC rules. That's actually what I meant but did not say clearly enough. It will be the VEC who rules on the adequacy of the documentation not the FCC. Although there probably is an appeal mechanism in the system.

If you have an old call book (pre March of 1987) that shows a listing that
is generally sufficient. Check QRZ. They have a service that can supply
such info I believe. The license or proof of license is the best way. But
otherwise, check with the ARRL or whatever VEC organization that you plan on
going through for the upgrade.

> otherwise. Maybe they are low to the ground or something.

I put up both a small directv dish and a yagi TV antenna, as permitted by FCC in 1996. I was the only one in the neighborhood that put up a yagi although several others put up the small directv dishes after I convinced them that the HOA could no longer prevent this. That was right after the telecom law of in 1996 was enacted. Today, I think that most people do not realize that they can put up a yagi tv antenna (the only real decent antenna for analog, which also works fine as a 2m transmitting antenna at 5W ;-)). There were at least 2 complaints over the yagi but the ASSN attorney knew the law very well and they left me alone.
>
>

> of the yagi-type TV antennas.

I think most of the general public does not know that most ASSNs cannot prohibit tv yagi antennas. And, no one is going to publicize that either. However, for the dish antennas, both DISH and DirecTV have made everyone who asked aware of their rights. If you happened to speak to a knowledgable sales person (not the majority)they would let you know that you can put up a yagi if you want, for local channels, but I think most people just purchase rabbit ears and lived with a terrible signal or sign up with local channels if available. With a Yagi, my analog signal looks much, much better than cable local used to look for local, better than the new satellite local looks today, it is cheaper and I still use it. Also, I can get out-of-market local channels not available via DirecTV, when conditions are right (they usually are).

I don't know if ARRL is the plurality or not. W5YI is quite prominent and
widespread also.

However, I expect that they will interpret things about the same way.

You can't document that I operated from Somalia, then you declare me a
bootlegger. Logic, David, logic.

> > > > You said:

Lemme see, you believe me when I say I operated. You don't believe me
when I say that I had permission.

Logic, David, logic.

> > > > You're a helluva guy.

> were false?

It's clear to me that you believe what you want.

But for your beliefs to carry any weight, you need to say you are from
the Somali government, you are my deployed military commander, you are
a U.N. official serving in Somalia, you are from the world court, or
you are an agent of the FCC.

Which one are you?

> > > > What a leap of faith you've made.

> Again, you've attributed to me a statement which I did not make.

David, OK, I'll grant you that we won't consider the amateurs worldwide that don't engage in DX activities.

Now, the number of amateurs that have applied for DXCC is what percentage of the number of amateurs engaging in DX activities? Again I ask, of all the worlds amateurs that engage in DX activities, how many have filed for DXCC?

We need to quantify in some way your claims of one world DX standard.

I would think that "Worked All Continents" is a more popular DX award than DXCC.

> > David, you need to come up with something new.
>
> We need to take care of old business before new business is introduced.

I thought you took care of it? Didn't I hear your gavel hit the bench?

Sure you weren't. Don't you remember what you said? You've already
said here that amateur operations weren't permitted.

> You have no experience in such matters.
>
> Darn it, you're wrong again.

Nope. Don't you remember what you said? Every country that you've
operated from had a government that you petitioned for amateur
operations.

> > You even went so far as to say that commanders cannot authorize any

I am not wrong. You said you couldn't operate in Vietnam. Maybe too much happy smoke or maybe you just bootlegged. Probably hear a different story tomorrow anyway.

Here's the quote:

"There was no amateur radio operation permitted by the military in Vietnam. I know of two legal stations, both operated by American civilians during my time in country. My military commander did not have the authority to permit me to operate on the ham bands. I don't have any written permission either."

Ryan,

You have an excellent point there. If amateur radio enthusiasts voted independently as you had suggested, the voice would be unified and heard all the way to Washington. Many interest groups do just that. Why not amateur radio as well? Something to think about :)

Best Wishes,
& Thank you for your support!

When the FCC did the reconstruction reconsiderations, they pointed out
that there was no detectable dedragration of HF in the first year after
reconstruction went into effect. No additional idiots on 14313

>
> It's clear to me that you believe what you want.

My belief can change depending upon what your story is on this
particular day.
You could clear up some of these issues by being more forthcoming and
answering a few questions. For example: What equipment and antennas
were used? What bands and modes did you use in making your contacts from
Somalia?
Which countries and continents did you work? How were the QSLs delivered
or handled? After all, you did tell us that you operated from Somalia
and that QSLs were exchanged. These should be easy for you.

> But for your beliefs to carry any weight, you need to say you are from
> the Somali government, you are my deployed military commander, you are
> a U.N. official serving in Somalia, you are from the world court, or

Where does it say that my views don't carry any weight unless I meet
your criteria?

That's awfully big of you since it appeared that you had no option but
to rope in your silly rhetoric.

> Now, the number of amateurs that have applied for DXCC is what
> percentage of the number of amateurs engaging in DX activities? Again
> I ask, of all the worlds amateurs that engage in DX activities, how
> many have filed for DXCC?

Again I answer: Ask the folks at the DXCC desk. If I told you, "12,323"
how would you be equipped to confirm my response without knowing how
many non-U.S. DXers are currently active?

> We need to quantify in some way your claims of one world DX standard.

Ask other DXers? Know any?

> I would think that "Worked All Continents" is a more popular DX award
> than DXCC.

More popular? Do you really believe that DXers consider WAC a standard?
Only among neophytes could that be possible. You keep coming up with
new ways to affirm my statement that you are not a DXer.

> > > David, you need to come up with something new.

No, it is assuredly with indication. You are without any indication
that you ever had permission to operate from T5.

> > > You were never in a situation where a commander had the authority to

My commander had the authority. His decision was that I couldn't
operate.
Don Riebhoff was operating legally right across town at the same time I
was in country. He used to run phone patches for Ambassador Bunker.

> > You have no experience in such matters.

I did no petitioning, Brian. I made application. Vietnam had a
government. I still couldn't operate.

> > > You even went so far as to say that commanders cannot authorize any
> > > amateur authorizations.

And I had no written permission and did no operating in the ham bands.
My commander advised that he could not grant permission. I was in the
military and had to accept his word. Yet Don Riebhoff, a civilian,
operated legally right across town from me.

So I broke no regs, no laws, did no bootlegging, had no QSOs. Now, back
to your situation...

I never even intimated any such thing. I've been hoping for the ITU
40M "harmonization" maneuver for years. In tbe best of all possible
worlds the DX would get privs all the way up to 7.300. That would
solve the problem. All extending U.S. phone privs down to 7.075 would
do is cause problems on top of problems.

Yes. And it's a pain in the butt. Another side of it being that there
are a very large number of hams out here who don't have computers
and/or connections to the Net. The League will make a few bucks on it,
no biggie.

So, 1) you were not in a situation where your commander had the
authority to authorize amateur operations, and 2) you have no
experience in such matters.

You accepted your commander's word.

No, Cecil, he didn't. Your commander had no decision to make, had no
authority to rescind a standing rule. He simply told you what the
rule was. The rule was, you said, ~no military pers can operate
amateur radio in Vietnam."

> Don Riebhoff was operating legally right across town at the same time I

David, there is no "authority" listed in the above document, other
than the DXCC. Reading it again won't make it magically appear. You
go be embarassed.

> how would you be equipped to confirm my response without knowing how
> many non-U.S. DXers are currently active?

You're the one who has stated that DXCC is the universal standard.
You need to back it up somehow. I'm just trying to help you think it
through.

OK, you've stated that 12,323 have applied for DXCC. Now how many
amateurs have worked DX?

> > We need to quantify in some way your claims of one world DX standard.
>
> Ask other DXers? Know any?

I asked you. Have you stepped down from being the World's Greatest
DXer?

> > I would think that "Worked All Continents" is a more popular DX award
> > than DXCC.
>
> More popular? Do you really believe that DXers consider WAC a standard?
> Only among neophytes could that be possible. You keep coming up with
> new ways to affirm my statement that you are not a DXer.

Now David, do you really believe that one amateur station can declare
all continents as local contacts? I don't. Thus working other
continents must be considered DX. Unless you've rewritten the rules
or forgotten what they are.

And by "more popular" I mean that it is probable that more DXers have
applied for WAC than DXCC. Do you disagree with this also?

> > > > David, you need to come up with something new.

Exactly. All the idiots were there before restructuring, indicating
that the old ways left a lot to be desired, didn't do what the OT's
said it did (keep out the riff-raff).

And FWIW, the General and Technician were the same written exam prior
to May 1987. Why shouldn't it take the same level of "ease?"

Finally, my comments prior to restructuring, about restructuring, were
this:

What I fear most about restructuring is a lack of enforcement; and
what I fear most about maintaining the status quo is a lack of
enforcement. Lack of enforcement is more detrimental to all of
amateur radio than any change in the rules.

> Yes?

Yes. If you can get through all 30 pages of it.

Mike was so upset about W5YI gold digging for $5. Now its up to $12
at the ARRL.

Now the questions.

How is license renewal and address modification related to examining?

How is it that a VEC can become the middleman for license renewal or
address modification, and charge a fee equal to the examination fee,
which already includes sending in a form or electronic form?

If the ARRL or W5YI can send in simple Form 605v, why do you and me
have to fill out the long form?

If the FCC were able to claim $12 per exam and $12 filing fee for
license renewal, perhaps it would have kept the FCC working for
amateur radio.

You are confusing VEs with VECs. It is probable that the plurality of VEs do indeed belong to either the ARRL or the W5YI (or even both). It would be a true statement that W5YI VEC and Alaska VEC do not answer to the ARRL VEC. Though it is quite possible that the larger VEC organizations (ARRL and W5YI) have more influence than the smaller ones.

The VEs (volunteer examiners) are the ones who physically administer the tests.

The VECs (Volunteer Examiner Coordinators) are the organizations that are allowed to be the coordinating bodies for the examination process. The various VECs meet and set up the question pools, agree on the interpretation of the rules (i.e. what constitutes acceptable documentation for proof of previous licensing), process the exams sent to them by the VE teams, etc. The VECs work together to establish the overall procedures so one will almost certainly require the same documentation as another.

I considered calling in once, however embarassment
at the very thought of my voice being reproduced over
"Boy Broadcaster's" horribly distorted and overmodulated
audio feed prevented us.

How sad. I've heard Pirate Radio stations on 6.950 with better audio.

280. K1MAN BROADCASTING???

Ok - I don't get it.

I'm listening to this guy on 14.275, here at 1923z.

I'm sure its been covered - but humor me.

This is clearly a BROADCAST to the public, not a QSO or any other legal HAM activity.

Uhm...how come this guy is still on the air???

Is it me, or am I just being naive in thinking that the FCC can actually enforce OUR laws?

KC8UBH.

Agreed. The 6950/6955 group does have good audio in a lot of cases. Some of the programs are quite professional sounding.

Did I have a choice? Doesn't matter, does it? I did not break laws or regs, did no bootlegging, had no QSOs.

Now, back to your scenario.

Care to answer the questions I posed?

It would, but it will never happen. Do you really beleive that the rest of
the world will all change to solve a US internal problem? I don't.

> All extending U.S. phone privs down to 7.075 would
> do is cause problems on top of problems.

Not atall. It would solve the problem at the point where it exists, i.e. inside the US. Some people here would lose by it, but that's nothing compared with the numbers of people who would be disturbed by moving the whole band down 100 kHz. I know that's not what you just proposed, but that's even more laughable, suggesting moving the BC stations out entirely. As the kids nowadays would say, that's just sooo not going to happen. You call me a troll, but you're living in a dream world. Snap out of it.

Maybe we should have phone on the bottom end of that band, and put
CW and digital on the top end. CW should be less bothered by the
international broadcasters than phone is.

Oh Geez, Alun, just back up and apologize. Then agree with him.
Although he doesn't sound like one, he's an engineer. Of some kind.
And he has military background. Yes, -real- military background. I'm
not kidding.

And don't forget to say good things about the Morse Code, or "troll"
and "virgin" will be the least of the names he'll call you.

Good luck to you now, and welcome to the group.

Brian

No, I didn't say that. I said that seeing another being allowed to
operate in Vietnam and you denied operation in Vietnam has caused deep
scarring.

All that happened before you ever heard of me.

You said that military personnel weren't allowed to operate in
Vietnam, but civilians were.

If you were a military person, why did you apply?

Who did you make your application to?

> > > > > > You even went so far as to say that commanders cannot authorize any

It's not "my way." Perhaps if the government of Vietnam had allowed
you to operate amateur radio there you wouldn't be so emotionally
scarred.

But look on the bright side. You saw a civilian state department pers
who was allowed to operate amateur radio and you made a career out of
it.

I accepted my commander's word also.

Just barely. The mateiral is much too complex for a beginners
license. The Novice license, pre-87 enhancement, was about right for
beginners.

And the FCC didn't do much enforcement for over 20 years. Now we have
known frequencies to avoid.

The statement only looks complex at first, Brian. It isn't. You've apparently read the item marked "1)". If you'll look at the item marked "2) (a separate issue)", you might find the key. That issue covers your lack of documentation.
There is no documentation of licensing for your supposed operation by any licensing authority whatsoever anywhere on the planet. In other words, anyone who questions whether you were authorized to operate is told to take your word for it. That doesn't wash anywhere.

Yes, its free to me.

> You didn't make an issue when W5YI was charging for the service.

Mike did.

Why is it
> an issue when ARRL VEC charges for the service?

Why does an entire exam session, to members and non-members alike,
including the electronic filing, cost $12 in reimbursable expenses,
and an electronic filing all by itself also cost $12?

Where is the body of rules by which a VEC can establish and charge for
non-examining services?

I've asked about a specific item. Apparently you can't remember that
one.

> > Have I attributed anything to you which you haven't written?
>
> Yes, you've said I didn't have permission.

Impossible, Brian. I would have had to have written that YOU said, "I
didn't have permission to operate from Somalia". I've not done that.

> To make your label of bootlegger valid. Show me your badge.

Badges? We don't need no steenking badges! Either you didn't operate (though you've told us previously that you did and that you exchanged QSL cards) or you operated and you don't hold and never held written permission to do so.

I've thought it through and given you good advice once again.

> OK, you've stated that 12,323 have applied for DXCC. Now how many
> amateurs have worked DX?

You're incapable of reading the simplest sentence and correctly interpreting it. I did not say that 12,323 have applied for DXCC. I have explained that you'd be well served to ask the DXCC desk.

> > > We need to quantify in some way your claims of one world DX standard.

> DXer?

There you go again. I've never made such a claim for myself and have denied it several times. Please come up with a single instance where I've used the term in reference to myself.

You asked me and I gave you some leads. I've given you leads previously but you've not used them.

> > > I would think that "Worked All Continents" is a more popular DX award

> or forgotten what they are.

So you have it in your head that six QSOs constitutes a better world
standard of DXing than the challenges of obtaining DXCC, 5BDXCC, 6m DXCC
or 160m DXCC?
Do you have any idea how stupid that makes you look?

> And by "more popular" I mean that it is probable that more DXers have
> applied for WAC than DXCC. Do you disagree with this also?

Try to stick with me, Brian. We weren't speaking of "popular". We were
speaking of a world standard.

While I was attached to the FCC Field Enforcement Office in San Francisco, I got an emergency assignment to attend a local meeting of a telephone industry rate and accounting practices committee that by charter required an FCC representative - the regular member having taken sick suddenly.

There I was, with a group of high-powered interstate telephone accounting professionals...who were amazed to find out that the FCC regulated radio communications and had field enforcement agents to do so.

I apparently knew more about their end of the business than they knew about mine.

Apparently not so scarred as to begin bootlegging while claiming that I
had official permission to operate.

> But look on the bright side. You saw a civilian state department pers
> who was allowed to operate amateur radio and you made a career out of
> it.

I didn't see anyone else operate. I didn't state the op worked for the
"state department" (the words are capitalized, Brian) and I didn't go to
work for the Department of State for about fourteen years afterward. I
was so scarred that I played music and sold electronic components. Hate
to spoil a peachy theory.

Firstly, I didn't say anything that I have to apologise for. All I said
was working split uses twice as much bandwidth.

Secondly, I'm an engineer too. So what? What does that have to do with the
thread?

What's the relevance of his military background to anything? Are you trying to say he's dangerous?

Good things about the code? Yeah, I'm sure it's the greatest thing since sliced bread. Can't stand it myself, of course ... but why do we have to open that can of worms?

Don't want to pay? Do it yourself, as hams had done from time
immemorial. Don't have 'net access? Call the FCC and get a paper
application sent to you.

And it's being done by an ARRL staffer in his or her paid employee
capacity, not as a VE/VEC.

I have no idea. You'll need to ask W5YI and N1VXY.

: Hans, are you saying that the ARRL is pimping their VE's?

No. Are you?

I have to admit that there is logic in that, but it would be nice to get
some phone spectrum where everyone else has it. The rest of the world has
at least 7.045-7.1 as a phone allocation, so a slice anywhere in that part
of the band would fix the problem. I suggested 7.075-7.1 only because that
section is phone in places where radio is controlled by the FCC but that
are outside Region 2 (that is to say basically outside North and South
America), so it would be the smallest change to Part 97 that would work.
Even a slightly smaller chunk anywhere between 7.045 and 7.1 would work
too, but would involve more rule writing.

It would fix one (perceived) problem, but would open another much bigger problem. Amateurs outside ITU Region II have -ONLY- 100KHz of spectrum on 40M in which they must squeeze all their modes. Putting a voice allocation there for Region II american amateurs would make an already crowded situation much, much worse.

The real solution is a worldwide harmonization of the 40M allocation and separation from the SWBC folks, which hopefully makes the agenda at the coming WRC.

If you guys are so upset over the $12..

Why doesn't some one who has already renewed using the FCC web process write down how they did it and post it here for all to enjoy rather than acting like crusty old farts ?

No, no. But that's what most everything here boils down to. Might as
well get it out of the way so they can decide which side to put you
on.
Kind of like a young man named Val. He came on here saying all the
right things about Morse code. He was their little darling. Said he
was going to take the code test.

There are four basic truths here:

You took the code exam and you like code: you're OK.
You took the code exam and you don't like the code: you're an idiot.
You never learned the code but want to: you're OK.
You never learned the code and don't want to: you're an idiot.

Kind of like a young man named Val. He came on here saying all the
right things about Morse code. He was their little darling. Said he
was going to take the code test.

For the record, I don't support code testing as a separate pass/fail
HF exam.

Yes and no. They've got Bart doing it. They also advertise it as
something which falls under their VEC. I'm just curious where this
body of rules are that authorizes VEC's to circumvent the FCC
application and renewal process where it is not associated with an
exam, and for the VEC to collect $12 along the way.

You're an Extra. VEC ops are part of (used to be most of) the exam
for Extra. I've looked at Part 97 and don't see anything about this.
Must be more unwritten rules like Farnsworth at 13/15wpm = Morse at
5wpm.

> : Hans, are you saying that the ARRL is pimping their VE's?

You're the one who established the kind of girl that the ARRL was,
metaphorically. Why did you do that?

No, it's because anybody who runs ssb on HF and also bleats about
spectrum conservation is either trolling or is a nitwit.

> > Ya didn't answer the question.
>
> Partly because I was insulted,

Pore abused, sensitive thing. See above WRT to RRAP virgins. Which YOU
sure as hell ain't.

> and partly because I doubt if you really
> want an answer. However, I use phone because I prefer it.

We all have the option of shooting ourselves in the foot if that's
what we prefer.

> > I never even intimated any such thing. I've been hoping for the ITU

>
```

> It would, but it will never happen. Do you really beleive that the rest of
> the world will all change to solve a US internal problem? I don't.

We'll see about the "never happen" thing. Personally I don't have a
problem with 40 just the way it is, I could care less when push come
to shove. Just because you can't yak down to 7.075 does not make your
problem any kind of "internal U.S. problem".

> > All extending U.S. phone privs down to 7.075 would
> > do is cause problems on top of problems.
>
> Not atall. It would solve the problem at the point where it exists, i.e.
> inside the US.

Horespucky, you already conceded that the DX running ssb below 7.100
is bitching about the CW and digital comms in that space. We don't
have that problem. Why create the problem in the U.S.? Just because
you don't happen to like to work split? Spare me the tears.

> Some people here would lose by it, but that's nothing
> compared with the numbers of people who would be disturbed by moving the
> whole band down 100 kHz.

Blather. Let 'em eat cake. The 15M band jumped out of the gloom from
nowhere in the late 40s when nobody had radios built for the band.
Then came the three WARC bands in the late 70s for which "there were
no radios". Today there are ham ops on 60m for which "there are no
radios". And you think moving 40 down a lousy 100 is some kind of huge
deal? I doubt that there is an HF xcvr out there which can't be very
easily "snipped". If that would "disturb" some refer back to my
comment about cake.

> I know that's not what you just proposed, but
> that's even more laughable, suggesting moving the BC stations out
> entirely.

Have you ever tuned 6.900-7.000?

> As the kids nowadays would say, that's just sooo not going to
> happen. You call me a troll, but you're living in a dream world. Snap out
> of it.

Snap out of what Alun? I could give a rat's patooie less actually,
I've been working the DX "tranceive" on 40 since back when I rode my
dinosaur downtown to take the tests.

> >> What language is that?
> >
> > CW.
>
> That's odd. I thought it used dits and dahs.

Your lack of linguistic agility is not my problem. You keep having
problems I don't have. Odd.

Exactly. I personally think it's better to stay on a single frequency, and
not answer people who call at the wrong time, but it takes a certain
amount of discipline, i.e. answer one of them and they'll all try to call
over the other guy you're working.

Most of my posts on here relate to code testing. even though I disagree strongly with some of the pro-testing people, none of them have ever called me a troll so far. Probably because I'm not.

Maybe this goes to the heart of what you're all really worried about - that when (not if, and it hasn't been 'if' for a long time) code testing is abolished the next battle will be over how much spectrum is reserved for CW.

>
>> and partly because I doubt if you really want an answer. However, I

So it's not a US problem that US operators bleep all over the phone subband? That explains a lot about your way of thinking.

> Why create the problem in the U.S.? Just because
> you don't happen to like to work split? Spare me the tears.

>

It's not working split that's the problem, that part's easy. The problem
is getting the DX to listen up.

> comment about cake.

Sure, modifying the ham equipment is no problem. I was talking about the
broadcasters and other users. Realistically, a lot of the broadcasters
simply won't move no matter what rule changes are passed. The BC stations
could move easily enough, but a lot of them don't stay within the BC band
even now.

Each country gets a vote in the ITU, and realignment would benefit one
country, the US. So you think that every other delegate will fail to
suggest that the US could simply change it's own rules instead? I'm
betting more than one of them will suggest just that. That's why
realignment is a pipe dream. It's been pushed here only because changing
the rules in Part 97 to take some spectrum away from CW is a domestic,
internal, 'hot potato', not because there is any chance of success in
getting realignment.

And they already use phone from at least 7.045 up, so adding US stations
to part of it would add more people, but it's not as if they use other
modes in that part.

> Probably to the point where working ssb dx would become close to
> impossible. He doesn't get it. But then again maybe he does, eh?

How so? If, say, I'm on 7.174 and the other guy is on 7.084, then that
frequency is still in use. Bringing us both down there doesn't use more
spectrum, it uses less.

>
>> The real solution is a worldwide harmonization of the 40M allocation

The rest of the world is restricted to that narrow little phone band on 40M.
We (in Region II) have an additional 200kHz of space above them. It borders
on outright arrogance (and is certainly incredibly selfish) to suggest that
we plonk our wideband signals down into that little sliver of spectrum just
because it's a little inconvenient to work "split".

Reality check.

What you are asking for is almost half of their narrow little 40M "phone
band" as an enclave which Americans would immediately fill with plaintive
howls of "CQ DEEEEEE ECKS", crowding all of their intra-region phone
operations even further down-band.

I'm sorry, but you are simply out to lunch on this one.

With all kind wishes,

Because it's in multiple threads.
Because people have to download it.
Because the threads have stuff in it we want to see, in addition to
your pitched battle with Brian.
Because you two are now just in the mode where one of you has to blink,
and neither of you plan to.
Because both of you are just restating the same thing over and over again.
Because both of you are just restating the same thing over and over again.

Both of you have made your point. And you've been asked to take it to
private email, or make another thread to continue (which we will be
quite free to ignore)

But as it is now, we have to wade through the thread, and yes, we can
ignore the posts from you and Brian , but what if you were to
accidentally post something that was on the thread topic? We'd miss it.

The only other alternative here is to filter the both of you out. But
that's not all that hot a solution. I for one like to read what the two
of you post.

So how about it? You two can have your very own thread in which you can
have your personal arguments, without annoying the rest of us. Heck,

I'll even start the thread for you. PSE K

1. Get onto the ULS.
2. Log On with Call Sign and FRN.
3. Click on renewal.
4. Fill out the blanks that need filling/changing.
5. Follow the instructions to validate and submit.
6. Leave the ULS.

Less complicated than using an ATM.

If I designate the ARRL, who assigns Bart, a paid ARRL staffer whose job, AMONG OTHER
THINGS, is to supervise the VC/VEC program, as my agent to fill out
and submit a renewal form for me, is he acting as the VEC?
Obviously not.

>I'm just curious where this body of rules are that authorizes VEC's
>to circumvent the FCC application and renewal process where it is not
>associated with an exam,

Where is the alleged "circumvention" taking place? To renew an
amateur license, anyone can get on the ULS and bang information into
the proper blanks. Some of us here have already had to do it. I've
done it for relatives whose mailing address is the same as mine but
who live overseas and at the time did not have ULS access.

No big deal.

>and for the VEC to collect $12 along the way.

This is a service fee, similar to the service fee that H&R Block
charges to file your income tax return for you.

Hardest part is finding the link to get to it from their
main page http://www.fcc.gov

It's at http://wireless.fcc.gov/uls/index.html

First thing is to find out what your FRN is. I found out
mine by going to http://www.qrz.com and looking up
my callsign. Then when you callsign's info is presented,
click "detailed info" which will then take you to a page
of your detailed info, including a link to "ULS listing"
Click that and you are taken to the FCC's ULS web
site with your info including the magic FRN, license ID
and SGIN numbers. Bookmark that page.
Then at the bottom of that page
click "ULS filing" and it will upload a plug-in.
Then you have to reboot Netscape. Use bookmarks
to get back to that page and click it again. If you
remember your password (!), then enter the FRN
and it and you're on your way. Or else click
"register with CORES". For some people this is
getting to be a real pain at this point, so paying $12 for the guy at
the ARRL may be worth it.

IIRC the FCC has done that for those of us who didn't do it for
ourselves. I am the trustee of two clubs and also provide a US mail
address for two relatives who live overseas where the USPS does not
deliver mail. IIRC Gettysburg has already sent FRNs for everyone.

This is not the 'real LLLLLooooyyyyddddd'. How do I know....read it and think about the real LLLLooooooyyyydddd.

This comment about the Spanish stations and Mike. Yep he raised holy hell with them. But guess what? MOST OF THEM WERE BOOTLEGGERS. And guess what else? FCC got them GONE. Remember all those PR stations that didn't go for a retest? You can thank Mike for that.

You go right ahead and join up with the American Amateur Radio Nitwit. Im sure the justice department won't have a problem checking you out too.

Have a nice day.

Dan/W4NTI

With split when the dx is talking your're listening, same total
occupied bandwidth as transceive.

> Maybe this goes to the heart of what you're all really worried about -
> that when (not if, and it hasn't been 'if' for a long time) code testing

The only CW setasides are 50.000-50.100 and 144.000-144.100. You did
pass a test on the regs at some point right?

> > We all have the option of shooting ourselves in the foot if that's
> > what we prefer.
> >
>
> So you'd rather shoot yourself in the foot than work phone, and yet you
> admit to operating phone. Are you a masochist?

No, of course you're not a troll . . .

Yeah, I've run some phone here and there. I'm two cards short of an
SSB WAZ and I have a JT card. At least 1/3 of my 80 & 40 5BDXCC cards
are for ssb contacts. Almost all for split freq contacts. Check some
of the country totals on 40 in the CQ WW ssb contest, 75 countries in
48 hours without transceive on 7.075-7.100 is not heroics. If this is
"masochism" gimmee more of it.

> > We'll see about the "never happen" thing. Personally I don't have a

> So it's not a US problem that US operators bleep all over the phone
> subband? That explains a lot about your way of thinking.

I really hate to bust yer bubble again but the biggest bitch the dx has with cw & digital ops is their own ops working the each other with RTTY and PSK31 on those freqs.

>
> > Why create the problem in the U.S.? Just because
> > you don't happen to like to work split? Spare me the tears.

> is getting the DX to listen up.

Ahhhhh . . there it is . . truth will out eventually: finally! So your "need" to be able to "work" the dx transceive is so that you can bludgeon them into acknowledging your existence whether they want to work the U.S. or not. What a nice guy YOU are! The Ugly American syndrome epitomized. You just provided the best rationale possible for NOT opening up 7.075-7.100 U.S. ssb to people like you.

>

> but a lot of them don't stay within the BC band
> even now.
>
> Each country gets a vote in the ITU, and realignment would benefit one
> country, the US.

Uhhhh . . don't look now Alun but the major thrust of harmonization is
to increase the size of 40m for the DX. We have our 300Khz, they
don't. DUH?

> So you think that every other delegate will fail to

Take what spectrum away? I can beep from 7.001 to 7.299 at will. I
hope you're not silly enough to think that's gonna change in any
meaningful timeframe.

>

Whatever it takes Alun, I'll work 'em one way or another while you're
still whining about not being able to work 'em transceive with ssb.

: I don't see any HF on your short list.

That's because there are no HF freqs which are reserved exclusively for CW,
none whatsoever.

: Does this mean K0HB works phone on 14.005?

No.

: Why or Why Not?

Because it is not allowed in the rules.

But modes other than CW are allowed at 14.005. For example, PSK31 is
perfectly legal at 14.005.

Good luck on this one now.

73, de Hans, K0HB

Thanks,

I vote for the individual, and what I have learned about the politician through as many sources as possible, to figure out which one is the LEAST crooked as well as aligned with my personal ideals.

I have spoken with about a dozen michigan senators/representatives (current) as well as some of the ones that have ran in the past 2 1/4 years and only one actually knew anything about ham radio!!!! This is where our local clubs need to get on board..... invite them to a club meeting! Share your concerns regarding amateur radio. Even if it does not work much in your favor, at least they will have gained some insight to the hobby. Hell, get 'em licensed!!!!

Ya missed the point.... morse code is the language or coding scheme that you would be sending the callsign.... you would be sending the morse code over a CW. Not necessarily interchangeable. One is a language/coding scheme and the other is a method of radio transmission.

I doubt there's a dx station anywhere which doesn't understand that
all he has to do to work the U.S. on 40 ssb is tune up the band to see
if he has the propagation then call CQ and "listening on 7190". If
they don't do that they're not interested in working you or anybody
else in the U.S. and ya deal with it.

'Course you could use the oldest trick in the book and give 'em a call
with CW . .

: (10-3 and 10-4 from the APCO listing)

I though 10-3 meant QRT.

Even so, strictly speaking an "affirmation" is a positive answer to a question; in other words equivalent to "yes". An "acknowledgement" (as in 10-4) simply means that you have received the message.

In American law, if an action is not specifically declared illegal,
it's legal. In this case, there's no bar to having a third party
fill out the form when so requested by the applicant. The FCC
considers the form as submitted by the applicant, not the third
party.

"Trust me".

Enough of this nonsense. Ignorance is curable. Stupidity is not.

362. Baxter vs. Sherin: Clash Of The Egos?

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-08 04:27:31 UTC
From: Anderson <Sarcasm@anon.com>
Message-ID: <avg9a5$62m$0@pita.alt.net>
Source record: 59445
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb

After reading posts from Glenn Baxter and Bob Sherin I find it rather odd that these two megahertz megalomaniacs, while so much alike, are so diametrically opposed. These two Hams, while at odds with one another insofar as how operating procedures are to be conducted, are more alike than opposite.
Both are clearly unashamed to laud themselves in the "I, Me" categories and both seem to take great pleasure in broadcasting their narrow philosophy to any and all within earshot.
Sherin, like Baxter, has gone to great lengths to post missives that are nothing more than braggadocio. One gets the distinct feeling that both Hams are lacking in self-confidence and must therefore, "toot their own horns".
Both operators have a commonality that is unappealing to the Every Day Joe in that they both apparently feel that the "wordier" their posts, the more impressed we will be with their alleged intellect and worldly advice.
Both operators have been known to interfere with ongoing conversations whether intentional or not, and neither one is the kind of Ham Operator that neophytes should emulate. Their claims to fame, however inflated, should be looked upon with healthy skepticism. Consider the source.....or sources, for what they are.

Why, Mike, I'm quite surprised. You outlined a litany of problems caused by Brian's posts and mine. I've provided you your very own thread so you won't miss any of the really important things which are often posted to this newsgroup.

Are you interested in Brian's latest problem with the ARRL? Lloyd's support of K1MAN? Alun's difficulties with 40m DXing? I wouldn't want you to miss any of the really worthwhile material :-)

I don't want you to think I'm not grateful to you, Mike so I'll take the opportunity to help Brian in coming clean.

Brian--

You'll appear to be more forthright and less disingenuous if you'll provide us with answers to the following about your operation from Somalia:

What callsign was used?

What equipment and antennas were used?

Who did the equipment belong to?

What amateur bands and modes were used?

What countries and continents were worked?

How were the QSLs delivered?

Dave K8MN

>
> That never happened to you or what?
>

Yes. it's happened, but usually not in a manor that doesn't
interfere with each other.... You implied that two QSOs
using the same split could coexist. Usually two QSOs
not using slit and operating on different freqs can coexist
no problem. The fact that the two QSOs sharing the same
split will eventually collide (interfere) means that it is better
to not use split, but have each QSO on different freqs.
Thus the amount of bandwidth cannot be thought of as
equal.

Oh, NO! Far be it that Doc be left out (or ignored) of an ongoing argument.
Doc simply cannot pass up a good opportunity to interject his words of
alleged wit.
Tread lightly, Doc, for Bob Sherin will take it upon himself to make light
of your posts....Bob is, after all, our resident self-apointed
pastor/mentor/know-it-all.
You will find, Doc, that Sherin has an ego that easily surpassed your own
and should you not believe this, just ask him.

:

False? What is false? Did you not work DX pileups in T5?

In the beginning ARPA created the ARPANET. And the ARPANET was without form
and void. And darkness was upon the deep. And the spirit of ARPA moved upon
the face of the network and ARPA said, "Let there be a protocol," and thre
was a protocol. And ARPA saw that it was good. And ARPA said, "Let there be
usenet" and it was so. And ARPA saw that is was good. And Usenet rose and
said, "Let there be rrap and it was so."

: Anyway, we've lost Carl Stevenson, Jim Kehler, Steve Adell, Kurt the
: sailor, Mike Deignan, Cecil, Eric June, Ed Hare, darling Val, Cutie
: Boy, Mark Morgan.
:
: Dick passed away.
:

:
: Hans, you've already said you don't believe in the Almighty (a chain
: letter, I think), so your statement above is nonsense. Even you
: cannot believe it, so why do you make it?

It's foma, pure foma.

From the Book of Bokonon, Chapter 1

Verse 1: All of the true things that I am about to tell you are shameless
lies.

Verses 2-4 : In the beginning, God created the earth, and he looked upon it
in His cosmic loneliness.

And God said, "Let Us make living creatures out of mud, so the mud can see
what We have done." And God created every living creature that now moveth,
and one was man. Mud as man alone could speak. God leaned close as mud as
man sat up, looked around, and spoke. Man blinked. "What is the purpose of
all this?" he asked politely.

"Everything must have a purpose?" asked God.

"Certainly," said man.

"Then I leave it to you to think of one for all this," said God.

And He went away.

: So back to your metaphor. In the context of what the ARRL is doing,
: how does your little joke fit in?

I have no idea how it fits in. Do you?

With all kind wishes,

de Hans, K0HB

Have you ever done one of their on-line renewal, modification, or
update filings? It comes up with most if not all the boxes filled
in with the info on file. Make the chnages necessaru, validate the
form, click "Submit".

In actuality it's an intelligence test. See if you pass.

If all else fails, my engineering firm will be glad to submit the
form for you. Our rate for clerical work is $60 an hour for simple
non-contested filings.

...oh, no, here we go, folks...!

>From the Book of Bokonon, Chapter 1
>
<snip>

Hans Bokonon flies again!

>I have no idea how it fits in. Do you?

Yes, we all do, Mr. Quotation.

You got your whatzit caught in your fly again and it pinched.
Unable to come up with original words you cut-and-paste
from a big macro of quotations.

Problem is, the quotations are obscure and unfunny.

Try something from the Holy Book of St. Hiram or the
Collected Sayings of Maud'ib by Princess Irulan.

Try borrowing Sgt Putz' Big Mirror where he tries to reflect
others' words as "replies" thinking himself very clever.

With all kind regards and a beep, beep...

>to you from there.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
!!!
!!!

...GEEZ! Grow up little boy. TRY to act the adult.

> Poor baby. Doesn't pay attention to what's being said by anyone except
>himself. Ignorant to the end.

Don't try the Mirror thing, little boy.

It must be a side effect of the purloined tranquilizers you use in
order to calm down and avoid those rage-induced typos...?

>>The FCC has stated publicly, in 1990 and again in 1999, that it
>> does not consider morse code testing elements to be of any
>> useful purpose in deciding whether or not an applicant should be
>> granted an amateur radio license. It stated (in 1990 and 1999)
>> that it must include them to meet ITU-R Recommendation S25.5.
>
> Exactly. The FCC is bound by international treaty.

No. The entire US administration is bound by agreement to the
terms of the United Nations charter. The International
Telecommunications Union is a UN organization.

There is NO "international treaty" in regards to amateur radio.
There is only the agreement of the United States of America
to meet the terms of the United Nations charter. That includes
all UN organizations in which the USA is a member.

The United States Congress legislated the existance of the
US Federal Communications Commission (1934, through the
passing of the Communications Act of 1934). The FCC acts
independently only insofar as permitted by the US Congress.

The US Administration to the ITU is composed of the US
Department of State, National Telecommunications and
Information Agency, and the Federal Communications
Commission.

>I haev said this all along.

Nonsense. Note: H-A-V-E, not "haev." Temper, temper...

>YOU continue to insist that it is due to some "lodge hall conspiracy"
>by "long-time 1x2's".

I have just stated the United States organization for radio
regulation and agreement with the United Nations and its

organizations. I can continue to repeat that until you reach
some semblance of understanding of reality.

No one can discuss, debate, or even argue with the fantasyland
environment of Sgt Putz' mind.

>That the FCC has not issued a declaration we can nail on the wall is not
>necessary.

Hypocritical statement.

Sgt Putz continues to DEMAND "exact proofs" of what He said
in previous messages in a word-for-word comparison...yet now
such things are "not necessary."

Sorry, reality does not allow altering environments to suit some
alleged message-point "win." Hypocrisy is not allowed and the
above is a prima facie example of HYPOCRISY. [caps for
emphasis]

The Federal Communications Commission makes many PUBLIC
statements of its policy views and most of the rest of the public
accepts those as the FCC's policy. Those are, as stated, all in
public view. There is NO separate collection of "insider viewpoints"
that "represents" the FCC.

>>Conjecture of a personal nature is NOT "proof" of anything.
>
> Not conjecture on MY part, Lennie. It's what THEY said.

Sgt Putz is very busy with conjectures, imagining things that
aren't there all to attempt winning message points. Foul. No
points won. Penalty...points taken away. Game over.

I was responding to the original post. How can I add something new when the original post is nothing new?

>Perhaps if you actaully spent some time on the air, Vipul, you
>MIGHT have some tales of your own to tell...?

Those were the old days. I was on the air briefly. "Worked" mobile and HF. THEN, I discovered "Ham" radio.

Amateur radio got me into trouble. My passion was my demise. I had the chance to sell out. My not taking that chance is now my regret.

Now, Ham Radio will probably be just a novelty. I will forget about experimentation, because "What's the point?". I'll keep my radio as a lingering of the past. I will probably get on the air as some kind of diversion. I will eat more. Eventually, as I will need something new, I will learn Morse code.

[Ran across this in an old 73 magazine article and noticed that some of the items discussed over 30 years ago are some of the same things discussed now. Times have changed but the gripes remain the same, have we really advanced in 30+ years? Ryan KC8PMX]

Hams Are A Funny Bunch Of People
Al Brogdon, K3KMO
73 Magazine
December, 1970
[Reprinted in its entirety]

Hams are a funny bunch of people. They will work for days with their beam antenna orientation to make sure it is pointed within one-half degree of the indicated direction-never considering the fact that the beamwidth of the antenna is 40 degrees.

They will overload their transmitters by factors of 50% or more, and milk that last watt of it-when it takes a power increase of four times to make one S-unit difference.

They will stay out of the ham club and complain until the cows come home about how poorly it is run. But they never want to join and work to straighten out the club's problems.

They will spend five hours and more building and installing ham equipment, telling the wife all the while that they just don't have the time to put a new line cord on her iron.

Some of them will crank their final amplifiers up a little and run 3kW PEP, never thinking about the fact that they would have to run more than 5kW to make a significant difference in signal strength about 2kW PEP. A few of these hams have the time to think this over during their license suspension period.

They will spend hours a day talking with people all over the world, but never say hello to their next door neighbor.

They will tell their wives they can't afford a new chair for the living room while they are writing out the order for a new $700 mobile installation.

They will buy surplus equipment to save money, and then spend an amount of money on it's conversion that would have bought good commercial gear that would have done the same job better.

They will set up stations with which they could communicate their ideas, but they will give a brief signal report, a brief weather report, a

description of their station, and run out of things to talk about.

They will spend an entire 48 hour contest period at the rig, leaving it only to catch short naps and take care of necessary bodily functions, but during the week they can't spare 10 minutes of their time to play with their kids.

They will buy complex and expensive keyers so the extra dots and dashes of their sloppy keying causes will be well-formed and correctly spaced. They use Q signals on voice, and the have to use phonetics to get the letters across, since voice is better suited for communicating words than for transmitting individual letters.

They will apply for every ham aware they can qualify for to document their accomplishments, when many of the certificates are for a level of accomplishment roughly equivalent to being able to cross the street without getting run over.

They will load half a ton of amateur gear and antennas into the car and take off for Field Day, but then have to suspend operation halfway through the contest because they didn't bring a spare fuse.

They will take great pride in being a ham radio operator, and tell all their nonham friends of many accomplishments of ham operators, and of the advances in the state of the art brought about by hams, when they themselves haven't been on the air in three years.

But one of the funniest things of all about hams is the typically human short-sidedness of most hams. They see all the faults of their fellow hams, and they are quick to criticize, but they are not aware of their own shortcomings. Aren't you glad that you and I aren't that way?

>I was responding to the original post. How can I add something new when the
>original post is nothing new?

If it's "nothing new", then WHY waste time "responding" anyway?

Sheeeesh!

>>Perhaps if you actaully spent some time on the air, Vipul, you
>>MIGHT have some tales of your own to tell...?
>
>Those were the old days. I was on the air briefly. "Worked" mobile and HF.
>THEN, I discovered "Ham" radio.

So you were bootlegging before you got a license? Is that period of
illegal operating why you get so "defensive" over CBers?

>Amateur radio got me into trouble. My passion was my demise. I had the chance
>to sell out. My not taking that chance is now my regret.

"Amateur radio got (you) into trouble"...?!?! An ARRL official kidnapped a
family member and forced you to rob a bank while they held them? You were
forced to film pornographic acts with animals? How did "Amateur Radio" get you
into trouble...?!?!

>Now, Ham Radio will probably be just a novelty. I will forget about
>experimentation, because "What's the point?".

"What's the point" indeed. If the rest of the world won't change just for
you, why go on? As a matter of fact, as dismal as the rest of your life
seemingly is, why not let me get a referal for you to Jack Kevorkian? I
understand he found several unique ways to help people whose lives have come to
an impasse and there is no use for THEM to go on. I am sure he could find a
plan you'd like.

>I'll keep my radio as a lingering
>of the past. I will probably get on the air as some kind of diversion. I will
>eat more. Eventually, as I will need something new, I will learn Morse code.

There are so many things you could do in Amateur Radio RIGHT NOW that
would keep you busy for many a year, Vipul. That YOU only care to focus on
using it as a "diversion" is your problem.

Steve, K4YZ

>Not me, you're the nutso, Sgt Putz.

For someone who doesn't know who he's talking to, I'd say your assessment
is in error!

>>You have yet to suggest an opportunity to do that.
>
>Next February 30th at 0900 good enough for you?

You do seem to like to ignore the facts, Lennie. I am not surprised.

>How does that relate to AMATEUR RADIO, mighty warrior?

How does anything YOU post here relate to Amateur Radio, Lennie? You have
long-ago left any semblence of being germane.

>GEEZ! Grow up little boy. TRY to act the adult.

If acting like you is "adult", then I'll be glad to stay just like this.
Better thought childlike than as decrepit, meaningless and lying.

>Don't try the Mirror thing, little boy.

I see. Only Lennie may say "poor baby".....Poor baby Lennie. Wants to
take his ball and go home...(Don't we wish...! ! !)

>No one can discuss, debate, or even argue with the fantasyland
> environment of Sgt Putz' mind.

Debate is always welcome. The kind of mean, vile and deceitful rantings
you promulgate are not "debate" by any milestone.

>>That the FCC has not issued a declaration we can nail on the wall is not
>>necessary.
>
> Hypocritical statement.

"Hypocritical statement"...?!?!

>Sgt Putz is very busy with conjectures, imagining things that
> aren't there all to attempt winning message points. Foul. No
> points won. Penalty...points taken away. Game over.

No conjectures, Lennie. No imagining nor "message points". Just Leonard H. Anderson spamming an Amateur Radio related newsgroup with his vile hatred of anything "not Lennie".

I really do pity you, Anderson. A shame your life has come down to slinging virtual mudballs at those you hate, isn't it?

Perhaps if you had really amounted to something once upon a time...

Steve, K4YZ

<snip>

It goes back even further than that. Here is an article from the
Zero Bias column of CQ magazine.

Zero Bias
Several recent letters have asked, "Is anything all right with
amateur
radio?" Sure, almost everything is all right. In fact, one of the few
big troubles today is that there aren't enough amateurs to enjoy its
blessings.

There are far fewer young amateurs to be seen, and talking to
them on
the air will verify this.

Amateur today is attracting older men.

Equipment prices have been forced higher along with everything
else in
our daily lives.

Perhaps an even more compelling reason for this lack of
enthusiasm for
our hobby by the younger generation is they have had little
encouragement.

And what is happening is that we are creating a lost generation of
amateurs - a generation that amateur radio can sorely afford to lose.
We must have new amateurs to replace those who drop out, those who
find
other interest or have too little time, and at the present moment
we're
not doing that.

Don't think not having these youngsters means less QRM, because the active amateurs of today won't appreciate the difference in their life-
time of operation. It does mean that eventually there may be less QRM and there may be less year after year until ham radio isn't justified in terms of its frequency allocations. It would be a crime laid directly on the steps of present day amateurs because in order to protect themselves against more QRM they didn't want to encourage new amateurs - they would be so selfish as to deprive others of the pleas-
ure they themselves derive from amateur radio.

That was CQ October, 1948.

As they used to say in the Navy, I'd crawl through a mile of briars to watch her skivvies go past in a laundry truck. She looks Truly Congenial to me, far beyond my powers to challenge her for the title.

Would you challenge her for the role? If so, post photos.

With all kind wishes,

de Hans, K0HB

JJ,

I'm starting to believe what the "big kahuna" (N0BK) said. A lot of amateurs may start out as kids (I was first licensed at 15), but pretty quick, girls start taking priority over radio. Then usually comes marriage and a family. Often, folks will become inactive for years. I was WA3RJX just before moving back into New York around 1972 and obtained the call N2JH. I never was on the air with that call and let my licenses expire in the early 80s. I regained an interest and called the Rochester Amateur Radio Association in the fall of 1993 asking when the exams were given. The first test of the season was that very evening! So I went and tested out. I obtained my new license and got back on the air as an oldster. Hmmmm .... the ticket is renewable in a few months - I'm going to have to check the date. I suspect amateur radio has always been and will continue to be pretty healthy.

I've never heard a sailor speak so eloquently.

But if that's the case, the organ grinder's monkey position was filled
long ago, in a land far away. You'll have to go elsewhere to sling
insults.

Brian

I give up.. here is the answer. Anyone still bickering about the issue will be demoted to twit and must spend the next 20 years on baycom 1200 bps packet sending code vs no code haunts around the globe.

Go to web site:
http://wireless.fcc.gov/services/amateur/licensing/renewal.html

You will find the following info there:

Licensing
Renewing a License

There are several ways of filing an application to renew a license. You can file through a Volunteer Examiner, through certain Volunteer Examiner Coordinators, or by:

Using the Universal Licensing System
Manually Filing Using Paper Form 605

You may use FCC Form 605 to apply for renewal of your amateur operator/primary station license grant, including those station license grants within the grace period. Use purpose RO (Renew Only) for this. If it is necessary to also modify your name or mailing address shown on your amateur operator/primary station license grant, use purpose RM (Renew/Modify). If you are not requesting a call sign change, file the Main form only. (Club or military recreation stations need to file through a Club Station Call Sign Administrator. See the Public Notice on CSCSAs. RACES stations are no longer being renewed.)

You may receive a license expiration notification from an entity that is also a VEC, but you are not required to use its services. File for renewal 30-60 days, but no more than 90 days, before your license expiration date. 47 CFR Section 97.21, provides that when your application for renewal has been received by the FCC on or before the license expiration date, your operating authority is continued until the final disposition of your application. If your license expires, you may apply for renewal of the license for another term during a two-year filing grace period. The application document must be received by the FCC on or before the end of the grace period. Unless and until the license is renewed, no amateur operator or station operating privileges are conferred. Applications received after the grace period has ended cannot be granted.

Section 1.913(f) requires that all applications, other than applications that must be filed through a VEC, may be submitted manually to the address below.

There is no fee for renewing your amateur operator/primary station license grant.

Using the Universal Licensing System

You may renew your license through the Universal Licensing System (ULS) at any time within 90 days of the expiration date for the license and up to two years after the license expires.

To renew, go to the ULS Home, select Online Filing, and follow the instructions below.

Renewal Only
(To renew your license and make no other changes. "Renewal with modification" is explained below)

Login with your FRN and password.
(Note: If you don't know your FRN, go back to ULS Home, and select Search/Licenses. On the next page, choose General from the pull-down menu, and click Continue. On the License Search -- General screen, enter your Call Sign in the appropriate space, and click the Search button at the bottom of the page. Your FRN will be displayed on the search results screen or your license record.)

For Purpose of Application, select Renewal Only and click Continue. If you have current applications saved in the system, they will be displayed in a list. Click the Select New Filing button at the bottom of the page to choose an application purpose.

Your call sign(s) will appear on the next screen. Click the box to enter a check mark for each call sign you want to update.
(Note: Your call signs will not appear if 1) you are attempting to renew prior to 90 days before the license expiration date, or 2) you have not associated the call signs with your FRN. To associate a call sign with an FRN, return to ULS Home and choose the CORES/Call Sign button. On the next screen, select Update Call Sign/ASR information, and click Continue. Next, enter your FRN and password and click Continue. The FRN/Call Sign/ASR Registration page will appear. Click the button at the bottom of the page labeled Enter Call Signs. Enter your call signs in the spaces provided on the following screen. Choose Submit to associate these call signs with your FRN. Finally, return to ULS Home and repeat the steps for Renewing your license.)

Sign your application by typing your name in the appropriate boxes at the bottom of the page.

Click Renew to file your application with the Commission.

If there the are errors in your application, you will be prompted to return and correct the errors. Otherwise, a confirmation screen will appear stating that your application has been successfully submitted and will display the file number of your application. Print this page for your records.

Renewal/Modification
(To renew your license and make changes to it)

Login with your FRN and password.
(Note: If you don't know your FRN, go back to ULS Home, and select Search/Licenses. On the next page, choose General from the pull-down menu, and click Continue. On the License Search -- General screen, enter your Call Sign in the appropriate space, and click the Search button at the bottom of the page. Your FRN will be displayed on the search results screen or your license record.)

For Purpose of Application, select Renewal/Modification and click Continue. (If you have current applications saved in the system, they will be displayed in a list. Click the Select New Filing button at the bottom of the page to choose an application purpose.)

A drop down box will appear for you to select the call sign(s) you wish to renew and modify.
(Note: Your call signs will not appear 1) if you are attempting to renew prior to 90 days before the license expiration date, or 2) if you have not associated call signs with your FRN. To associate a call sign with an FRN, return to ULS Home and choose the CORES/Call Sign button. On the next screen, select Update Call Sign/ASR information, and click Continue. Next, enter your FRN and password and click Continue. The FRN/Call Sign/ASR Registration page will appear. Click the button at the bottom of the page labeled Enter Call Signs. Enter your call signs in the spaces provided on the following screen. Choose Submit to associate these call signs with your FRN. Finally, return to ULS Home and repeat the steps for Renewing your license.)

The application, prefilled with information from your license, will appear. Make changes by clicking and highlighting the appropriate information. Choose Next Page to move to the next screen of the application.

Sign your application by typing your name in the appropriate boxes and click next page.

When you are finished modifying your license, sign your application by typing your name and the date in the appropriate boxes. Then click Submit to file your application with the Commission.

If there the are errors in your application, you will be prompted to return and correct the errors. Otherwise, aconfirmation screen will appear stating that your application has been successfully submitted and will display the file number of your application. Print this page for your records.

417. Research Help/Callbook Census

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-10 23:56:30 UTC
From: Bruce <K1BG@hotmail.com>
Message-ID: <3E1F5DAE.6BBA190@hotmail.com>
Source record: 59489
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I'm doing a research project, trying to come up with US Amateur Census data going back for as long as it is available. I'm asking for a little help in gathering the data.

My 1980 Callbook (only printed US Callbook I have) on page 10 has the "Census of Amateur Radio Licenses in the U.S.A.". I'm looking for the Grand total at the bottom of the page. For instance, in 1980 there were:

Novice 75,036
Tech 71,883
General 125,559
Advanced 87,127
Extra 25,506

I'm not interested in Club or Military numbers. The Census was printed in both the US and International Callbook editions.

If you have some callbooks on your bookshelf, I'm asking if you could gather a little data for me. If you could send me the numbers for one or maybe two years, I will compile data and publish it on the internet. Hopefully, there will be enough responses that no one person will have to spend a lot of time on this. Also, I will let you know what years I have numbers for as I get information in. There is no use in sending me information that someone else has already researched.

Thanks in advance for your help!

Bruce, K1BG

I have the '92 and '03 callbooks. Here are the numbers (I've added your
numbers for '80 in as well):

Class 1980 1992 2003
----- ---- ---- ----

Novice 75,036 96,914 51,589
Tech 71,883 146,893 258,474

Tech Plus 87,423
General 125,559 120,165 143,491
Advanced 87,127 103,332 86,652
Extra 25,506 55,008 104,254

As you can see, I've added an additional row, as Tech Plus is now listed separately. The '03 callbook is unfortunately the last issue of the Radio Amateur Callbook.

The ham radio store in Laurel, MD used to have a back room with every issue of the callbook, for customers' use, but I don't know what happened to them when they closed down. It is possible that someone in the Laurel VEC might know?

It's quite lucky that our collective callbooks are fairly evenly spaced, with 12 years between yours and my old one, and then 11 years from that one to the current one. Hope you get lots of people to submit a lot of others. One from about 1970 would be informative. I bet some libraries have some old ones.

421. Re: Research Help/Callbook Census

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-11 02:05:37 UTC
From: yodoc@aol.comnospam
Message-ID: <20030110210537.01697.00000397@mb-fo.aol.com>
Source record: 59523

The only hard copy Callbook I have is from 1983 (USA Listings), purchased at a hamfest a few years ago for a buck. Here's the data:

Callbook Year: 1983 (U.S.)

Novice: 87,479
Technician: 79,620
General: 123,161
Advanced: 95,509
Extra: 31,782
Total: 417,551

Total excludes 4,181 club, military, and repeater station licenses, but you said that you didn't want that data.

FCC tells Cbplusser he has to upgrade, to operate HF. Cbplusser tells FCC, that thats unfair, and he shouldnt have to take anymore tests. Sounds normal for the present new Hams. Here comes the next cry from the Knuckle Dragging Mentally Challenged. We need more Dumbing Down for the Mentally Challenged. Isnt Dumbing Down great.

that is not always the best choice. where i work we have 2 licenses for uhf base and ht's we use. we got got these very official looking notices from a company called 'universal licensing service' (obviously selected so their initials mimic the fcc's system name). they want $80 to renew each of our licenses... well i checked the fcc site and we can do that ourselves for $50 each. so our manager asked me to take care of it directly, of course after i figure out the forms, spend time on the phone with the fcc getting walked through the process the first time, get the application rejected because our accounting people didn't send a check in fast enough, reapply with credit card payment, send in for refund for check that was cashed even though the application had already been rejected for no payment, do expense account to pay off credit card, etc, etc, etc, it probably cost them $1000 per license! and of course in 10 years when its due again there will probably be a new and improved system to learn, but i sure won't be doing it!

David, Kelley would have rolled out his "military background" and
wouldn't have had those problems.

I've been on 2 meter FM since 1977 and haven't found any "Cbplussers". Met lots of nice hams, though.
>
>>Anyone who wants to operate an amateur radio station on the HF/MF amateur
>>bands needs to have the appropriate license. For most people, that means an
>>amateur radio license.
>
>Thats the point, the CBplusser has been operating on HF Phone, the FCC
>caught him and told him that if he didnt seize they would cancel his License, as
>well as fine him.

"told him if he didnt seize"?? I have no idea what that is supposed to mean.

Ah, so you are talking about one individual. Who is this person? Was there an FCC enforcement letter or other action?

If there's any info on line , how about posting a link so we can all read it for ourselves?

>his comment was he doesnt to take anymore Test, because there
>being un fair to him

So? People the FCC has caught have said all sorts of things.

> >IIRC, you avoided taking some tests by waiting until after April 2000 to

>Some EX-servicemen have difficulty adjusting to civilian life long
> after they have left service life. Military service, that is...

Yes...You have, haven't you, Lennie...?!?! Ex-rear area radio war hero
who wasn't anywhere near anything even CLOSE to "combat", yet who frequently
engenders his Army "career" as "heroic" because he was once a member of a unit
that suffered combat casulties three years before he joined it?

>"Contributions to public service" do not require the contributors
> to be granted amateur radio licenses.

No, it doesn't, but obviously YOU have a problem with those who DO have an
Amateur Radio license who DO contribute to public service.

It ruins YOUR "Amateur Radio is only a hobby" rants.

>> To wit:
>>
>>QUOTE FROM ARRL WEBPAGE:
>
> ARRL is a membership organization...(SNIP)

REGARDLESS of what ARRL is, it accurately reported a story on it's webpage

Your disgusting, cowardly attempts to denigrate that fact are shamful, you

>ARRL is a MEMBERSHIP ORGANIZATION. It is not a
> journalistic endeavor yet it wants to be taken as one.

Just like you wanted to be taken as a "radio professional", yet you aren't
one, Lennie?

>ARRL is a MEMBERSHIP ORGANIZATION. Like all such
> membership organizations it must continue to glorify itself and
> amateur activity to retain the Belief System of membership.

It was a member of the New Jersey legislature that made the accolades,
Your Creepiness, not the ARRL. The ARRL only reported a story on it's web
page. The story is verifiable via third parties. Does the fact that the ARRL
reported the story on thier web page make it any less true?

YOUR "belief system" is that if you lie, cheat and snarl often enough someone will take you seriously.

The FACTS are that you are ONLY a lying, cheating, snarling PUTZ, who WAS gracious enough to immediately prove my point in the original post by making this immediate and predictible response.

Thanks.

>None of the above is any "rant against amateur radio."

Keep telling yourself that, Lennie. I am sure YOU think it's true. The FACTS are that it is a mean, insensitive and untruthful RANT.

>It is
> rather a realistic description of a regulatory term and a
> certain membership organization.

No, it was YOUR attempt to undo the obvious damage it did to one of your pet rants. It was yet one more piece of evidence that, despite your best spin, you have very little comprehension of what Amateur Radio is, what it means to those who really care about it and what it really means to those who have benifitted by it.

The key word is 'carrier'. From 47 USC 153(10):

The term ''common carrier'' or ''carrier'' means any person engaged as a
common carrier for hire, in interstate or foreign communication by wire
or radio or interstate or foreign radio transmission of energy, except
where
reference is made to common carriers not subject to this chapter; but a
person engaged in radio broadcasting shall not, insofar as such person
is so engaged, be deemed a common carrier.

Never seen one of those. You mean a MURS radio?

My 2 meter ham rig is a Heathkit HW-2036. Built it from a kit back in 1977. Still works great after all these years. Big, heavy and not many features compared to the more recent stuff.

And you still haven't explained what a "Cbplusser" is.

> for or in connection with intrastate communication service by wire or radio
> of any carrier,

Much of the FCC's jurisdiction comes from the fact that a low-powered
station, incapable of communicating outside the state, is still capable
of interfering with signals arriving from outside the state.

Imagine, for example, a 1-watt FM broadcast station located here in
Pleasant View, 25 miles from the Kentucky state line. Nobody's going to
be able to pick up this station anywhere in Kentucky - its broadcast
coverage is strictly intrastate, within Tennessee.

However, if it's operated on 98.7MHz it's definitely going to interfere
with reception of WHOP-98.7 on the same frequency. WHOP is licensed to,
and operates from, Hopkinsville, Kentucky. My 1-watt station may not
have coverage outside Tennessee, but it interferes with an out-of-state
station - interferes with the ability of WHOP-FM to conduct interstate
commerce.

Even stations operating on frequencies/locations that wouldn't
ordinarily interfere outside the state can cause interference during

unusual propagation conditions. A 5,000-watt FM broadcast station, located in central Texas and operating on 121.5MHz, certainly wouldn't interfere with communications on that frequency anywhere outside Texas under normal conditions. Given a tropospheric opening, however, it would make the emergency locator service useless in areas of Oklahoma, Arkansas, Louisiana, and/or other states.

Arguably, with widespread use of satellites, *any* frequency is capable of causing interference to communications outside the state.

It would be interesting to see the exceptions mentioned. I'd not be surprised if they serve to ensure the FCC is authorized to establish *technical* regulations for intrastate communications (again, on the basis that they can interfere with interstate communications); that the restrictions on the Commission's regulatory powers here go only to regulations on the charges and non-technical terms of intrastate communications services. i.e., the FCC can't regulate your local phone bill.

Of course about 30 minutes...maaaaaybe an hour after it showed up, so
would the federal marshals...At least for THAT frequency! =)

That's the way it was until the early 1980s when The Congress
amemded Section 301 of the Comm Act specifically to give FCC
(exclusive) jurisdiction over intrastate radio transmissions as
well.

We kicked this around (cross-posted) with mostly wannabe non-lawyers
(and one non-communications lawyer to whom I hope I taught a few
things) several weeks ago.

Case Closed.

The International Telecommunications Convention is a separate treaty that the US is a signatory to, and requires specific ratification by the Senate to be effective. The International Radio Regulations is a separate treaty that the US is a signatory to, and requires specific ratifivation by the Senate to be effective.

I'm still POed at (now ex-) Senator John Glenn who held up Senate ratification of the 1979 WARC Radio Regs (published as the 1980 Edition) for several months. As an "astronaut" the rest of the Senate looked up to him on things scientific or technical, while the real reason for his antics was because of some ego pizzing contest he was having with the head of NASA over budget and expenditures - nothing to do with the content of the treaty.

Most of the No-Code Techs I know do more for the hobby on their feet and with their hands, heads, and hearts in Emergency and other Community Service Organizations than Extra's like you who sit on your asses in the shack, probably pissing other HAMS off by sarcastically announcing that the frequency you're camping out on (but not using) "is in use" and doing absolutely NOTHING to further the hobby.

Next time you go to Hamvention in Dayton, thank all those No-Code Techs who did *MOST* of the legwork setting up the entire event, you thankless slob. Next time you go to your next field day with a whole bunch of Extra class HAMS standing around looking important and being jerks, thank the No-Code Techs who did the *real* work setting THAT event up.

Nah, no need to apologize to me, Jim... just didn't want Mike (or anyone else) wasting their time trying to talk to this troglodyte. He has no respect for his fellow hams and even less respect for the written (typed) form of the English language. In the shrunken coprolyte that resides in his braincase, he somehow occasionally manages to find two synapses with enough spark between them to form incoherent rants against Technician-class hams, and/or against those who use 2 meters to talk to their local friends and fellow hams. A saving grace for him is the fact that on HF (or any other band, for that matter), no one knows you're a functional illiterate. But type, and remove all doubt.

J.

Yeah, right, tell that to the horde of nocode rubberneckers who stood
around watching the last time I bothered opearating FD with them. When
3 or so of us beeped our way to two thirds of "their" score.

We haven't been back since, we don't need them to "set up the event"
or cook our hot dogs for us.

Hey! I was one of those 3 or so!

We had clueless newbie rubberneckers of all license classes. And clueless OTs, too. Lotsa fun anyhow. Like listening to the 40 SSB bandleader loudly proclaim how "his" station had peaked at something like 30 QSOs/hr for 40 minutes, then quietly pointing out how the 80 CW station had done a run 60 QSOs/hr for twice that long.....

Or the really funny looks when I pulled out the ARC-5-and-dynamotor setup to copy the W1AW message at 10 AM on Saturday. First 100 points of the event, earned in about ten minutes.

>We haven't been back since, we don't need them to "set up the event" >or cook our hot dogs for us.

Actually the guy in charge of food was a General, as I recall. But the best was the homemade hummus and pita brought by an Extra.

Six and a half months to the next one...

The two are different things, actually.

And the fact is that amateur radio offers you many, many opportunities
to explore that "passion". All sorts of spectrum, lots of modes, very
few rules on experimentation compared to other radio services.

If you take the opportunities, that is.

> I can't sell out now because
> lightening rarely strikes twice in the same place.

You can do whatever you choose to do. What you seem to be choosing to
do with your "passion" is mostly putting down other hams.

btw, lightning (that's the correct spelling) often strikes again in
the same place. Empire State Building gets struck several dozen times
a year.

Amateur Radio Newsline™ Report 1326 – January 10, 2003

Amateur Radio Newsline report number 1326 with a release date of Friday, January 10, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio gets two new satellites and the F-C-C tells a radio club that it wont get involved in an internal club dispute. The details on Amateur Radio Newsline report number 1326 coming your way right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE: RUBIN-2 / SAFIR-M IN ORBIT

Two new ham radio satellites are in space. One is from Germany and the other from Saudi Arabia. Q-News Graham Kemp, VK4BB, has the details has the details on a German payload called SAFIR-M:

--
Audio Only Report. No text available. Hear it in MP3 at
http://www.arnewsline.org
--

More information is available i on the SAFIR-M website http://amend.gmxhome.de But be advised that it is in the German language. There is no English translation provided. (ANS, Q-News)

**

HAM RADIO IN SPACE: SAUDISAT 1C ALSO IN ORBIT

The other new satellite is called SaudiSat 3. Its also known as SaudiSat One C and now as SO-50 – its ham radio designation.

As it name implies, this is the third in the unique SaudiSat series. It was also on board the same Russian launcher that orbited SAFIR-M.

Accordiing to AMSAT North America, this latest bird in the SaudiSat series comes by way of the Space Research Institute of the King Abdulaziz City for Science and Technology. For ham radio operation it carries what amounts to closed but available on-demand cross-band F-M repeater. The input uplink is on 145.85 MHz. The output channel is 436.775 at 250 milliwats into a quarter wave antenna.

And like a growing number of terrestrial repeaters, this orbital one requitres use of an access tone. In the case of SaudiSat, that tone frequency is 67.0 Hertz.

And there is one other similarity to closed terrestrial repeaters. SaudiSat-1C also requires that a designated control operator activate it on each pass so that it can be used by the general ham radio community. (ANS)

**

THE 5 MEGS EXPERIMENT: ARRL SAYS ITS WAITING FOR A NEW BAND

The ARRL is out of the 5 Mhz experiment and is now hoping for for the creation of a new ham band. Amateur Radio Nerwsline’s Norm Seeley, KI7UP, has the rest of the story:

--
The ARRL has permitted its WA2XSY experimental license for 5 Mhz to expire on January 1st. The League says that it is now pinning its hopes on the FCC to establish a new ham band in that spectrum but admits that it is facing some stiff opposition.

An ARRL bulletin says that starting in January 1999, 15 Amateur Radio clubs and individual hams took part in the 5-Mhz experimental operation that basically concluded in 2002. Through these operations the ARRL says that it obtained sufficient information to justify its petition for creation of the new band.

Last May, the FCC proposed going along with the ARRL's request to create a new domestic secondary High Frequency allocation from 5.25 to 5.4 Mhz. But in August the National Telecommunications and Information Administration requested that the Commission not go forward with the proposal. The NTIA says that several government agencies with allocations in the proposed spectrum had expressed reservations about sharing the spectrum with hams.

But the ARRL is still very hopeful the new band can be created. In fact, it has been working with the government to resolve the impasse. Meantime, the FCC has yet to act on the 5 Mhz request.

For the Amateur Radio Newsline, I’m, Norm Seeley, KI7UP.

--

The ARRL says that the new allocation at 5 MHz is an urgent priority for Amateur Radfo. It says such an allocation would enhance emergency communication activities by filling a propagation gap that exists between the 80 and 40 meter bands. In the meantime, experimental operations on 5 MHz continue on a limited basis in the United Kingdom and in Canada. (ARRL)

**

RESCUE RADIO FOLLOW-UP: THE GUAM SUPER TYPHOON

Guam continues to recover from the super typhoon which hit last month. Amateur Radio Newsline’s David Black, KB4KCH, has the latest:

--
By far, the best source of information during and after the December 8th super typhoon that hit Guam has been Duncan Campbell, KF6ILA. Campbell lived through the storm and reported on it and the welfare of Guam’s ham radio community through his postings to the QRZ.om website. In his latest report Campbell says

that the focus has shifted to recovery from the giant storm.

Campbell says that utility services are slowly being restored. As his report was filed about 30 percent of the island had both electricity and water. He says that the electrical restoration is hampered by a lack of transformers on the island. A shipment is expected shortly.

More signs of recovery Schools were slated to re-open on January 6th. Three schools which are too damaged to reopen. These students will be bused to other schools which are open.

As to ham radio on the island. As reported earlier all of Guam's radio amateurs are safe. There was s damage to some homes due to windows being blown out but no homes were destroyed. And two members of the Marianas Amateur Radio Club radio reportedly rode out the storm in their boat moored in the harbor.

Campbell says that a pair of Guam's more senior hams were not able to get their antennas down in time. He explains that the younger operators usually take care of them before a typhoon when there is notice. This time the typhoon was being reported as missing Guam by 100 miles up to 12 hours prior to landfall. So their antennas were still up when the typhoon hit. Needless to say the antennas and towers were destroyed.

Having talked to these two, Campbell reports that they do not know when, if ever, they will be able to replace their antennas. But help may be on the way. The Marianas Amateur Radio Club is already in discussions to install some wire dipoles for the high frequencies and some copper J-Poles for 2 meters at their homes.

Finally, Campbell says that the Red Cross, Salvation Army and FEMA are doing an outstanding job here on the island. Though he hears that the national news outlets are not covering this disaster, he wants the world of Amateur Radio to know that Guam is not being neglected..

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

According to Campbell, the Army field hospitals he reported having been flown in have now shut down and the medical professionals have now returned home. The hospitals have been stabilized with power and water, and the damage occurred has been patched, though final repairs are still months away. (KF6ILA, ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W5MCC New Orleans VHF Club 2 meter net heard Monday nights on their 146.86 MHz repeater.

(5 sec pause here)

**
ENFORCEMENT: ITS NOT OUR BUSINESS

If you are having a personal disagreement with a member of your radio club, don't bring it to the FCC. That's the message sent by the regulatory agency to a Texas group where it says that it will not iget involved. The agency's Daryl Duckworth, N-N-Zero-W, explains:

--
Duckworth:"The complaint of the Texas Soputhmost Amateur Radio Club concerning actions by a former trustee was dismissed. The club was told that the matter was Civil and best handled by the local courts."
--

By way of background in January of 2002 the San Benito, Texas, based filed a complaint with the FCC. It requested that the Commission issue a Cease and Desist Order to Thomas A. Tanner directing him to stop unauthorized operation of the club repeater. It also wanted him to remove his personal equipment from club property and discontinue unauthorized use of other club equipment.

But says the FCC says that setteling what amounts to interpersonal disputes is not within is jurisdiction or purview. Rather its a civil matter and not one that the Commission does not plan to pursue any further. (FCC, RAIN)

**

ENFORCEMENT: NO MUSIC ON 2 METERS

The FCC has told an California ham that he could face some strong punitive action. This, following allegations that he transmitted music in the two meter band.

The warning comes in a December 12th letter to Mark T. Sprague, KF6WAF of Antioch. In it the regulatory agency says that monitoring information indicates that on numerous occasions in October and November of 2002 that Sprague transmitted music on 146.415 MHz simplex and also failed to properly identify his station. The FCC says that direction finding bearings led them directly to Sprague's home.

The agency tells Sprague that these charges are violations of Sections 97.113 and 97.119 of the Amateur Service Rules. It adds that he could be subject to license revocation and suspension proceedings, as well as a monetary forfeiture or fine. (FCC)

**

ENFORCEMENT: STAY OFF 20 METERS

One last chance to straighten out your act or we we act against your ham license. Thats the jist of a warning from the FCC to a Michigan ham. Amateur Radio Newsline's Mert Garlick, N6AWE, takes an in-deoth look:

--
The threat of stern enforcement action comes in the form of a letter to to Michael E. Guernsey Sr., ND8V, of Parchment Michigan. Its from FCC rules

enforcer Riley Hollingsworth, K4ZDH. In it, Hollingsworth says that his agency continues to receive complaints of Guernsey's alleged appropriation of certain frequencies and interference to certain operators who attempt to use them. Among the frequencies mentioned in Hollingsworth's letter are 14.262 and 14.275 Mhz – both in the 20 meter band.

And the FCC notes that this is not the first time that it has taken up enforcement issues to Guernsey. Hollingsworth letter reminds ND8V that the agency has contacted him before regarding such incidents. Specifically on November 14, 2000 and May 20, 2002. And after the November 2000 incident Guernsey's authority to operate below 30 MHz was removed for a period of nine months.

And says Hollingsworth, he is not going to warn Guernsey again. He tells ND8V that if it writes to him another time it will be to notify him that the FCC is taking punitive action. Hollingsworth says that future incidents of such operation -- even a single incident -- will result in a fine being issued and revocation proceedings against Guernsey's ham radio license being initiated. That says the FCC, is the way that it is.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE.

--

Meantime, Hollingsworth has taken one step to defuse the overall problem. He has told Guernsey to stay off of the 20 Meter Amateur Band until the issues surrounding the allegations of his operation are resolved. (FCC)

**

ENFORCEMENT: HAM JAILED FOR SPYING STILL HOLDS HAM TICKET

A ham who is serving a life sentence for espionage still has his ticket. This even though he will probably never be permitted near a piece of ham gear again. Amateur Radio Newsline's Kenn Locke, N8PJN, tells us why:

--
Remember Robert Hanssen the former F-B-I agent convicted last year of spying? If you do, you will also recall that he held the Amateur Radio service call sign K-9-Q-V-L.

Well guess what. He still does.

Contrary to what many hams thought would happen, the FCC has not acted to revoke his Amateur Service licenses. The reason? Most likely nobody has bothered to ask it to.

While Hanssen may have been one of the highest profile cases in 2002, the charges against him did not involve prosecution by the FCC. It was a matter for the Department of Justice and Federal Prosecutors. As such, its very unlikely that anyone in either agency sat down to write a letter to their counterparts at the FCC asking them to cancel Hanssen's ham radio license.

The bottom line: Unless someone files a formal request, the chances are that Robert P. Hanssen will remain as K9QVL until his ticket expires. Maybe longer if he decides to try to renew it from his cell in the Federal Penitentiary where he will probably live out the rest of his natural life.

For the Amateur Radio Newsline, I’m Ken Locke, N8PJN.

--

Thanks Ken. (ARNewsline™)

**

REPEATER LISTINGS: ARRL SEEKS REPEATER LISTINGS FROM COORDINATORS

This note to frequency coordinators. The deadline for this year's submissions of listing for the 2003 ARRL Repeater Directory is Friday, February 7, 2003. As has been the case for many years, the ARRL only accepts listings from recognized frequency coordinators unless no coordinator exists in a specific region. For more information on how to list repeaters please contact Brennan Price, N4QX, at ARRL headquarters. His e-mail is n4qx@arrl.org. (Repeater Owners Remailer)

**

ARRL: LICENSE RENEWAL AND OTHER SERVICES TO NONMEMBERS

The ARRL is now providing F-C-C Amateur Radio license renewals, address changes and other license modification services to nonmembers. For a $12 fee, the League will renew a nonmember's Amateur Radio ticket within 90 days of expiration, file an application to change address or name or request issuance of a new sequential call sign.

For several years, the ARRL has been handling renewals, address and name changes and modifications free of charge for members. Nommembers were directed to the FCC's free Internet or hard-copy application options or to other providers of such services. (ARRL)

GOOD INFORMATION SOURCE: NEW RFR WEB SITE

Our friends over at the CGC Communicator report that RF Safety Solutions has a new web site dealing with that very subject.

As its name implies, RF Safety Solutions is a company that provides consulting for those concerned with human exposure to RF signals. It was founded in 2002 by Richard Strickland who is a well-known expert in the field of RF safety and who has developed RF safety programs and conducted training for a number of major wireless communications companies and broadcasters

The RF Safety Solutions web site covers RF safety reporting, safety programs and training. There is also a good overview of what RF radiation really is. Its really one of the best thought out places to learn about R-F safety. Look for it in cyberspace at www.rfsafetysolutions.com. (CGC)

**

NAMES IN THE NEWS: CHANGES AT THE CGC COMMUNICATOR

And speaking about the CGC Communicator, word of a major change at that broadcast industry publication. Editor - Publisher Bob Gonsett, W6VR, has announced that Steve Blodgett, W7RNA,
has assumed the helm as Letters Editor.

Formerlly WA7GFV, Steve Blodgett is well known to broadcasters nationwide. He holds an Adcanced class Amateur Radio license and has been actively engaged in broadcasting operations and engineering for nearly 35 years, with stations in Montana, Arizona, and California. For 14 years he worked as the Chief Engineer and Radio Engineering Manager with the late Gene Autry’s Golden West Broadcasters in Los Angeles. He also used to operate an on-line bullrtin board for Chapter 47 of the Society of Broadcast Engineers and served as chairman of the Southern California Frequency Coordinating Committe. Thats the group which handles broasdcast remote pick-up recommendations.

In making the announcement, Gonsett says that having Blodgett on board will allow him more time to concentrate on CGC's consultant radio engineering practice along with frequency and spectral monitoring services. It will also permit W6VR time to to pursue a number of new opportunities as well. (CGC)

FREE STUFF: WABA DIRECTORY ON THWE WEB

The Diamond DX Club reports that the new WABA or Worked Antarctic Bases Award Directory for 2003 is now available for free downloading. Its in Portable Document Format on the club's web site at www.ddxc.net. The new version includes a 12-page revised Antarctic bases listing with the latest corrections and a new column for Islands on the Air reference numbers. It also sports a a new section containing historical notes. Again that URL is www.ddxc.net. (Diamond DX Club)

CHANGING OF THE GUARD: GRONK RADIO NETWORK FOUNDEER - SK

One of the pioneers of repeater interlinking has died. This, with word that Gary Belda, K6ENS, has become a silent key

According to a report from Bruce and Melanie Forestal -- thats WB6ARE and K5QQA -- Gary Belda was one of the principals behind the Gronk Radio Network. Gronk

is one of the oldest 440 intertied remote base systems in the South-Westen United States and stretches the most of the Calidornia coastline.

As one of its archetects, Gary Belda among the berst liked hams in the world of F-M and repeaters. He worked in the two-way radio industry for Advanced Electronics for many years before leaving to join the field of traffic control systems. He was an expert in the aera of two-way radio and always willing to lend a hand on a ham radio repeater project.

Belda died in whats described as an unfortunate accident possibly related to antenna work. No other details are available at this time. A memorial service was held for him on Thursday, January 9th, at the First United Methodist Church in Redondo Beach California. (W6KGB)

**

ON THE AIR: COMMEMORATING HISTORY

History is coming to the ham bands. This, with word from UT5UKY that special event station EM60USB will be active from January 23rd through February 2nd to commemorate the 60th anniversary of the Battle of Stalingrad.

The Battle of Stalingrad was one of the decisive World War II Russian victories. It stopped the German army’s southern advance and turned the tide of the war.

Now, 60 years later, ham radio will be an integral part of the commemoration of that historic event. And if you get to work EM6-0USB you are advised to QSL to UT5UKY either direct, or through the bureau. (UT5UKY)

**

INTERNATIONAL-CHINA: RADIO MAG LIFT TRAIN RUNS JAN 1

The world's first magnetic levitation or mag-lift passenger train began running in Shanghai China on January 1st. The radio controlled train reached 312 miles per hour in testing. In regular service it will carry passengers and freight at a top speed above 250 miles per hour between Pudong International Airport and Shanghai's financial district. The distance is 30 miles an the trip will take mere 7 minutes -- not even enough time to make a quick cell phone call. (Technology Online)

**

PROPAGATON ASSISTANCE: C6AFP BEACON MOVING

Steve Rutledge, N4JQQ, says that he plans to move the C6AFP beacon on 50.062 Mhz in the near future. It is currently located at Treasure Cay, Great Abaco, Bahamas in grid FL-16. It will be going to a new home on Green Turtle Cay, Bahamas which is about five miles away. This is another island, same grid. C6AGN has agreed to let Steve put the beacon up at his QTH. (VHF Reflector)

**

CONTESTING: LINDHOLM TO CQ WWW VHF CONTEST

Turning to on the air operations. Word that John Lindholm, W1XX is the new Director for the CQ World Wide VHF Contest. Lindholm replaces Gene Zimmerman, W3ZZ, who left to take over writing the World Above 50 Mhz column for QST magazine. (VHF Reflector)

**

DX

In DX, DK9GG and DJ4KW will be active as V31GW and V31YN from Belize until February 25th. On February 8th they will be joined by DL2SWW and DG2TM. The four plan to operate from NA-073 on the 21st through the 23rd of February. QSL direct to each operators home call. (DL2VFR)

And K9YNF reports that he will be active as K9YNF slash HR9 from Roatan Island. This, from January 11th to the 18th. He will operate SSB only on 14.260, 18.128, 24.950, 28.460 and 28.560 Mhz. This, plus or minus a kew kilohertz to compensate for any Q-R-M. QSL via his home call -- either direct or via the bureau. (425 DX)

**

THAT FINAL ITEM: DOGGIE TALK AND THE IG NOBEL AWARDS

And finally this week, word that an inter-species communications device has received special recognition. Amateur Radio Newsline’s producer Bill Pasternak, WA6ITF, has more:

--
No, we are not kidding. An inter-species communications apparatus -- as in a dog-to-person translator -- is one of the winners of the 2002 Ig Nobel Awards.

What are the Ig Noble awards you ask? They are a spoof of the famed Nobel Awards ceremony and are given annually at Harvard University to recognize achievements that cannot or should not ever be reproduced.

Winners are selected by a secret committee from thousands of nominations. Actual Nobel Laureates present the Ig Nobel’s at a
ceremony where the winners are hailed with cheers and a flurry of paper airplanes. And if a recipient feels insulted or slighted by the award, it is withdrawn.

For 2002 those victorious included the people behind the definitive study on bellybutton lint and an inquiry into what arouses ostriches. But by far the dog to person translator was one of the most popular. Its works by listening to the tone of a dog's bark converting that data into an interpretation of the dogs mood.

The device is already on the market in Japan. An English language version called Bow-Wow-Lingual -- nope -- we are now kidding -- Bow-Wow-Lingual -- It may be on the market here in the U-S-A in about a year. And we thought that you’d want to know.

For the Amateur Radio Newsline, with my dog Daisy, I’m Bill Pasternak, WA6ITF.

--

Hmmmm. If it happens, we wonder what breed will be honored with an Ig Nobel for being the first to dog to get a ham radio license and make DXCC.

More about the Ig Nobel awards is in cyberspace at http://www.improb.com/ig/ig-top.html (Science Frontiers)

Phil, the US of A is a member of the United Nations. The ITU
is a UN body. Yes, it's possible to be a signatory to the ITU
and not be part of the UN and vice-versa, but hardly the case
in reality.

There still isn't any "international law" that exists as LAW in
any other country, complete with police and courts and such.
"International law" boils down to a common-agreement on the
part of members, an honor system. If someone doesn't want
to be part of the honor system, they can't be prosecuted in a
real court...they are "prosecuted" (part way) by other means.

If the US Congress has to ratify certain honor system
agreements, then that LAW applies to the US of A and its
citizens and all those who fall under that jurisdiction. It does
NOT apply to the rest of the world, therefore it isn't - per se -
"international law."

> I'm still POed at (now ex-) Senator John Glenn who held up

> the 1980 Edition) for several months. As an "astronaut" the rest
> of the Senate looked up to him on things scientific or technical,
> while the real reason for his antics was because of some ego
> pizzing contest he was having with the head of NASA over budget
> and expenditures - nothing to do with the content of the treaty.

Well, you take that up with the administration and legislature of the state of Ohio. We've all been a party to your remarks on the pizza contests you personally have or had. Part of that party is the "explanations" of law delivered in the long-timer's "that's the way it IS" tone.

Pizzing or not, WARC-79 was TWENTY-FOUR YEARS AGO.
The dispute between SW BC folks and hams on the 40m band HASN'T BEEN RESOLVED YET. Why not? Having too much fun tossing pizza back and forth? The IARU hasn't helped hams much, ARRL hasn't helped hams much on that 40m issue.

24 years. Enough time to sire a child and have them graduate college. Long time. ITU-R hasn't solved the problem, IARU hasn't solved the problem, ARRL hasn't solved the problem, "international law" hasn't solved the problem. Everyone is seemingly too righteous to negotiate...each side is "superior" to the other.

Sort of like it is in here... :-)

Ratification of the rules of the ITU makes them law in the United States,
subject to changes and modifications made by our administration.

No new courts and police necessary.

>"International law" boils down to a common-agreement on the
> part of members, an honor system. If someone doesn't want
> to be part of the honor system, they can't be prosecuted in a
> real court...they are "prosecuted" (part way) by other means

Sure they can. The United States is presently the subject of several
suits in The Hague.

>Well, you take that up with the administration and legislature of
> the state of Ohio.

The administration and legislature of the State of Ohio have nothing to do
with Congressional panels or committees that members of thier bodies may be
party to.

>Pizzing or not, WARC-79 was TWENTY-FOUR YEARS AGO.
> The dispute between SW BC folks and hams on the 40m band

Because all those "radio professionals" can't get their collective heads
out of thier rectums long enough to make up their minds.

>24 years. Enough time to sire a child and have them graduate
> college.

How would you know? How many do YOU have, Lennie?

>"Beep, beep..." - the Book of Pokemon

"Error Will Robinson, ERROR!"

That's the Book of Road Runner.

Sheesh. If you had kids ya wudda known.

Sheesh!

Vipul, news AFFECTS policy and reflects CHANGES in policies. Do you think changes occur in a vacuum?

No...Not every Newsline post reflects policy matters, but who are YOU or anyone else to edit or censor ANY news release in ANY media to decide what is or isn't policy related?

It should be here. I for one am glad that it is. It belongs in this forum more than most of the posts (and yes, many of my own) do.

No, it shouldn't. The "rec.radio" newsgroups unified charter indicates that
this type of message belongs in "rec.radio.info", not here.

Agreed that there is and has been alot of TRASH in this newsgroup (and in
"rec.radio.amateur.misc"), but that still doesn't make it proper for the
Newsline SPAM to be here in violation of charter.

We seem to forget the meaning of words.
Policy and news do not mean the same thing.
A dictionary may help, but i'm sure you know what these words mean.

Just as when a news item was posted about Hams doing a service. It is news.
News is an event. An event without opinion is not policy. It later became
policy when it was discussed, but the original news story is not policy.

So, whats the harm? Information can be useful. But when you want information
about one topic (policy), you don't want to sort through another topic (such as
news). I'm not saying news is bad. I read news. I should get news when I am
looking for news, not when looking for policy.

Also, the name calling and personal battles cut down on policy information.

From: wa8ulx@aol.com (WA8ULX)
>Just like when you key the Mic on your 2 Meter CB

I didn't know they had 2 meter CBs! When a ham puts a 2 meter rig in his car is it a 2 meter CB? Just curious.

WA8ULX makes one and only one point: that ALL hams that have not passed the code test are CBplussers.

Does WA8ULX have any proof that ALL no code techs are CBplussers? Do any studies, polling, etc indicate this?

Also, how do we know ALL Hams that passed the code test is not a CBplusser? Upon passing the code test, does one instantly gain the technical knowledge to be a better operator?

WA8ULX , lets see some information backing up your accusations.

Good points, Dan, but the way I see it is this: The license test was just the beginning. What's most important is what is done with the license. Rigs built, QSOs, skills developed, friendships made, equipment destroyed, antennas raised, 807s consumed, articles written, beginners Elmered, SKN, FD, SS, DX tests, club meetings, hamfests, etc., etc.

That's the stuff what's a big deal.

73 de Jim, N2EY

Extra class since 1970 (no big deal, really)

Doesn't sound like the CB band at all. No echo boxes, music, people jaw
boneing to nobody in particular. 2M is well behaved around these parts
in NNJ. Besides, code wasn't that good of a lid filter, as witness 14313
back before reconstruction.

>We seem to forget the meaning of words.
>Policy and news do not mean the same thing.
>A dictionary may help, but i'm sure you know what these words mean.

No, YOU seem to have missed the point, Vipul. Policy cannot be made in a vacuum. It requires that all participants be knowledgeable and INFORMED. To be informed one requires INFORMATION. Information is procured from deveral sources, the NEWS being one of them.

>Just as when a news item was posted about Hams doing a service. It is news.
>News is an event. An event without opinion is not policy. It later became
>policy when it was discussed, but the original news story is not policy.

And without NEWS of the event being promulgated how do you being it to a discussion, Vipul?

>I'm not saying news is bad. I read news. I should get news when I am
>looking for news, not when looking for policy.

So you'd rather have to go to several places to get the information you need for "policy" discussions..?!?!

If you are so offended by the Newsline posts, skip over them. The posts are CLEARLY captioned as such. Just don't read it.

There is no such thing as a "CBplusser".

>Upon passing the code test, does one instantly gain the technical knowledge
>to
>be a better operator?

No, one does not gain "technical knowledge", however learning (and at
least occassionally using) Morse Code makes one a more functional operator.

>WA8ULX , lets see some information backing up your accusations.

Whew...Seems I heard something like that being asked of someone who kept
insisting that Amateur Radio was somehow rife with "code words". That person
hasn't answered the questions put to him yet.

Simultaneously crossposting these to rec.radio.info would help resolve
such long-standing debates about the appropriateness of FAQ and bulletin
documents in the discussion newsgroups. See:

http://groups.google.com/groups?selm=3c3fb961%240%2459826%2445beb828%40newscene.com

Please E-mail me if you have any questions, or require assistance in
properly formatting your bulletin or FAQ for simultaneous cross-posting
to rec.radio.info.

> it a 2 meter CB? Just curious.
>
cb hasn't needed a license since the mid-1970s. A ham license is
needed to operate a 2 meter rig. Therefore, a 2 meter rig cannot be a
cb, by definition.

Simple logic - which escapes some people.
> ---
> WA8ULX makes one and only one point: that ALL hams that have not passed the
> code test are CBplussers.

Not a point. Just a put-down.

And one cannot tell from the license class whether someone has passed
a code test. Any given Tech may have passed the code test but not the
written (yet). And for almost 3 years the FCC has been renewing Tech
Pluses as Techs.

> Does WA8ULX have any proof that ALL no code techs are CBplussers?

No such proof can exist, as shown above. The license simply says
"Technician".

> Do any studies, polling, etc indicate this?
>
> Also, how do we know ALL Hams that passed the code test is not a CBplusser?

First you have to prove such a thing even exists.

> Upon passing the code test, does one instantly gain the technical knowledge to
> be a better operator?

What "technical knowledge" is needed to be a better operator that is
not covered by the Tech written?

Operating better requires SKILL. Code skill is one of the skills that
makes someone a better operator.
> ---

>
> WA8ULX , lets see some information backing up your accusations.

Don't hold yer breath while waiting...

73 de Jim, N2EY

who was a Technician class ham back in 1968....

Not quite. I headed up a volunteer municipal security patrol operation
which used CB radio when it got started so I got the license. I later
moved the operation to VHF FM ~25 years ago which was the last time I
had any interest at all in CB.

SB QST @ ARL $ARLB005
ARLB005 FCC Launches Consumer-Oriented Electronic Comment Filing
System

ZCZC AG05
QST de W1AW
ARRL Bulletin 5 ARLB005
From ARRL Headquarters
Newington CT January 15, 2003
To all radio amateurs

SB QST ARL ARLB005
ARLB005 FCC Launches Consumer-Oriented Electronic Comment Filing
System

The FCC has launched ECFS Express, an updated electronic system that the Commission says will make it easier for some members of the public to file comments on FCC proceedings. ECFS Express is a simplified version of the popular Electronic Comment Filing System (ECFS), but it is not available for all FCC proceedings.

ECFS Express focuses on topics rather than docket numbers, and requires minimal input by consumers seeking to participate in the Commission's public rulemaking process. ECFS Express is accessible from the FCC home page at http://www.fcc.gov. Users click on the "File Comments" logo. Anyone who wants to comment just has to click on a topic, fill in their personal information, write their comments and hit "SEND."

The FCC said the downside is that if the particular issue you want to comment upon is not listed among the ECFS Express topics, you'll have to use the full version of ECFS, located at http://www.fcc.gov/e-file/ecfs.html, to comment on proceedings not listed. At the moment, the EFCS Express list includes no Amateur Radio-related proceedings.

FCC Consumer and Governmental Affairs Bureau Chief K. Dane Snowden said, "By making the process more intuitive and less technical, all those interested in what we are doing at the FCC can have their voices heard. Our goal is to have as much of the public as possible participate in our rulemaking processes."

Not really - it's because the Region I broadcasters say "screw you,
buddy - I got mine" to anyone who wants to displace them, just as
the US military through the NTIA said to the amateurs about 6.9-7.0
MHz here.

Shows you the REAL view of "the needs of amateur radio" in the
larger scheme of things. We're lucky to keep what we have at 7 MHz.

Spam or not, it's in violation of the charter for this newsgroup, and there's
no way that such could ever be considered appropriate.

I have told them that the appropriate group is "rec.radio.info" and that it is
inappropriate here. Now, I'm telling their provider (and have been doing so
for the past 2 months).

Not exactly. The way I read the "rec.radio" newsgroups charter, cross-posting
this to "rec.radio.info" AND any other group in the hierarchy is still against
charter policy.

It should be posted to "rec.radio.info" ONLY and NO OTHER "rec.radio.*" group.

>charter policy.

>It should be posted to "rec.radio.info" ONLY and NO OTHER "rec.radio.*" group.

Could you quote specific passages of the charters that support your
position above? My understanding from reading the charters:

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

both in terms of what they say and what they DON'T say, is that
cross-posting between groups is permitted (provided that the posts are
reasonably on-topic, and a reasonable number of groups are chosen). If
cross-posting is not specifically prohibited, then larger Usenet
guidelines, like those posted to news.announce.newusers:

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

apply. Furthermore, rec.radio.info was specifically intended from the get-go (I worked with VE6MGS to create the newsgroup in 1992/1993) as a cross-posting target like rec.music.info or news.answers.

Cross-posting is also discussed further in the "Guide to the Personal Radio Newsgroups" at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

Again I disagree. The rec.radio.info group is for ALL radio, not just
amateur.
The ARNewsline is devoted almost totally to amateur. I have no desire to
have to peruse a non-amateur newsgroup to find the postings related to
amateur newsline.

Cheers,
Bill K2UNK

From K4YZ:
> There is no such thing as a "CBplusser".

A CBplusser is a poor operator, a tiny step above a CBer. WA8ULX claims that ALL no-code techs are CBplussers and ALL that passed code are not CBplusser.

>>WA8ULX , lets see some information backing up your accusations.
> Whew...Seems I heard something like that being asked of someone who kept
>insisting that Amateur Radio was somehow rife with "code words". That person
>hasn't answered the questions put to him yet.

I have answered this plenty.

I will add this additional method. Invite someone that is unware of Ham radio. (Don't know what "Ham" radio is, didn't know Hams etc.). Take this person to a Hamfest and/or a couple meetings

Lets see if the average non-Ham agrees that Hams don't use codewords when they are not needed.

Also, ask if the person notices certain demographics. Also, lets see if the average non-Ham does not find Hams strange.

>cb hasn't needed a license since the mid-1970s. A ham license is
>needed to operate a 2 meter rig. Therefore, a 2 meter rig cannot be a
>cb, by definition.

Lets face it, even I agree that 2 meters is CB with repeaters, hence it is a 2 meter CB.

>And one cannot tell from the license class whether someone has passed
>a code test.

Irrelevant.

>First you have to prove such a thing even exists.

CBplusser is a definition. Its a tiny step above CB.

WA8ULX claims ALL no code techs are CBplussers and all that passed code are not CBplussers. Apparently this term is applied whether or not the person used a CB prior to getting a no code Ham license.

>What "technical knowledge" is needed to be a better operator that is
>not covered by the Tech written?

The material is covered in the written. However, you don't have to understand the written material to pass the written test. I agree on that point.

>Operating better requires SKILL.
>Code skill is one of the skills that
>makes someone a better operator.

Picking up signals by ear in presense of noise is also a skill. Tuning receivers by ear is also a skill.
Adjusting for SWR is also skill.
There are many more useful skills.

Code skill is a skill, but only one of the skills, and a [less] useful one that is made [most] important.

>> WA8ULX , lets see some information backing up your accusations.
>
>Don't hold yer breath while waiting...

I haven't heard proof yet.

Listening to 2 meter doesn't prove anything. No difference between 2 meter and Hams that passed code at meetings. Although, I learned more about the typical HAM.

:

You seem to enjoy talking in riddles, Vipul. Would you mind expanding on
those oddly worded requests?

You see, you are something of a puzzlement to many of us. You seem
moderately intelligent, so I'm assuming you weren't tricked or coerced into
passing your license examination, thinking perhaps that there would be 17
anxious and willing virgins waiting after you'd passed through the ritual,
or some other similar inducement.

You are a ham, presumably because you wish to be one. With that in mind,
your crusade of denigration of the Amateur Radio Service just doesn't ring
true. What are we missing here?

With all kind wishes,

de Hans, K0HB

: ARRL does not have authority to make a legal decison.

We all have the authority to make legal decisions. I decide every day whether I can legally drive a certain speed, or legally make a left turn at a certain light, or can I legally operate my radio on a certain frequency using a certain mode, or whether it's legal for me to keep a certain length of walleye that I catch, or whether it would be legal for me to bitch-slap some idiot who just made a pass at my sweetheart. We make those legal decisions by reviewing the applicable laws, and act accordingly. As an incorporated entity, I'm sure ARRL has not only the authority but also the obligation to make legal decisions every day.

Sunuvagun!

>: average non-Ham does not find Hams strange.
>:
>
>You seem to enjoy talking in riddles, Vipul. Would you mind expanding on
>those oddly worded requests?

Sorry, I should explain more.

Referring to demographics, Ham radio is 95% male, large percentage are old, large percentage (visibly higher than general population) are overweight. This should not matter except that the hobby must attract/create these types of people to have such high percentages.

Examples of strange include using codewords in ordinary conversation, putting call-sign on car license plate, wanting to learn Morse code, hating CBers, Wuoff Hong, and other cult like beliefs.

>You are a ham, presumably because you wish to be one.

License means band access. So, there is some benefit.

>With that in mind,
>your crusade of denigration of the Amateur Radio Service just doesn't ring
>true. What are we missing here?

I do not denigrate Ham radio to non Hams. I say that I am in Ham Radio and praise/defend it. I invited non-Ham to Hamfest, gave copy of ARRL handbook, mentioned I am Ham in social situation. It is in my benefit to improve the image of Ham Radio.

"Ham" radio is different than Amateur radio. "Ham" radio is very much a cult. Although technically FCC licenses are given for "Amateur Radio" operation, the amateur radio operators like to be called "Ham" Radio operators. A big sub-cult of Ham Radio operators learns a skill called Morse code. Being a cult is not necessarily bad in itself. Ham cult does not fit my interests. I am interested in the "other" technical aspects most Hams are not interested in.

>And he is an extra light, he would have never gotten the extra
>except they dumbed down the test.

Not true, I didnt want the Extra could have carried less about being an EXTRA. The only reason I got it was some Dumb CBplussers bet me $250 that I couldnt pass it. As a matter of fact I still have not used the Extra Privilages and probably never will.

> people to have such high percentages.

Scratching head Gee, let's see... I don't answer to *any* of the above traits, so it must've been something else that attracted me to the hobby. It was the Spirit of the Radio that brought me in (being a longtime SW listener and having ham friends who were also SW listeners, mostly). I think the hobby attracts technical types, for sure. But I have met enough hams now that don't fit your description that I don't feel like the odd person out. I'm female, (relatively) young and not overweight. I am a geek, however, and I think that's almost a prerequisite to get into any technical hobby- and I think of the term "geek" as a compliment. :-)

> Examples of strange include using codewords in ordinary conversation,

I don't use code words in general conversation when talking with non-hams. Or with most hams either- the crew I talk to generally doesn't either. So what.

> putting call-sign on car license plate,

haven't done that either.

>wanting to learn Morse code

Well, it wasn't so much a matter of *wanting* to learn it as needing to for me, since I wanted HF privileges. Gee, Vipul, you're 0-for-3 so far.

>hating CBers

I have never listened to any of the CB channels, so I can't hate any CBers.

> Wuoff Hong, and other cult like beliefs.

Oh, that is SO 1930's...

> I do not denigrate Ham radio to non Hams. I say that I am in Ham Radio and
> praise/defend it.

Sure Vipul. Just like you do in your posts to rec.radio.cb.

> "Ham" radio is different than Amateur radio. "Ham" radio is very much a cult.

Well, maybe I'd best get my sorry behind to a "deprogramming center" ASAP.

> I am interested in the "other" technical aspects most Hams are not interested in.

There are lots of aspects of AR to get into, certainly. If you prefer to go off on your own to enjoy them, then so be it. Just don't insinuate that the rest of us are aimless, blind Ham-sheep that're lured in by the siren-song of some cult leader. Which is simply ridiculous, if that's what you believe.

>
>A CBplusser is a poor operator, a tiny step above a CBer. WA8ULX claims that
>ALL no-code techs are CBplussers and ALL that passed code are not CBplusser.

No, Vipul, a >>LID<< is a poor operator.

There are a great many CB operators who are themselves fine operators. A LID is a LID, regardless of WHICH service in which they are found.

>> Whew...Seems I heard something like that being asked of someone who kept
>>insisting that Amateur Radio was somehow rife with "code words". That
>person
>>hasn't answered the questions put to him yet.
>
>I have answered this plenty.

No you have not. You have yet to explain to me or anyone else why Amateur Radio should be the least bit different than any other sport, hobby, passtime, occupation or avocation when it comes to the use of subject-specific "lingo" for it's activites.

>Lets see if the average non-Ham agrees that Hams don't use codewords when
>they
>are not needed.

How can the "non-Ham" make any such judgement, Vipul? Without some frame of mutual reference from which to make an informed opinion, all they can do is shrug their shoulders. In hang gliding we call those folks "wuffos". Wanna know what a "wuffo" is, Vipul?

Your "suggestion" says "average non-Ham". This means a person with no radio background at any level other than using a TV remote or microwave oven.

>Also, ask if the person notices certain demographics. Also, lets see if the
>average non-Ham does not find Hams strange.

You mean like the guys who go bare-chested in January to a football game with thier team's logo painted on them? Or perhaps you mean like teenage girls who dress in all-black, use black lipstick and fingernail polish and don't shave their armpits? Or perhaps you meant like middle aged or early senior men

who haven't shaved for 10 years, wear frayed out Levi's with a beerbelly and ride Harley's..

You mean THAT kind of strange, Vipul?

Or do you just mean a group of guys and gals who like to swap stories about working Lower Slobovia at 3AM on a dipole and 10 watts, or how they busted 1M points in the DXWW contest last year?

That kinda strange?

Someone here is strange, alright, Vipul. It's a guy in Mass who has a Ham Radio license, hangs out in Ham Radio USENET groups, but hates Ham Radio! Ya wanna know his name and callsign?

>2
>meter CB.

Hmmmm.....Just read through Part 95. I cannot find ANY allocation for
Citizen's Band operators in the 144-148mHz Amateru allocation.

And with the RARE exception of repeaters like the W6NUT machine in LA and
few others, there are precious few examples of CB-like operation on 2 meters.

Yes, the occassional new operator slips and says "10-4", "negatory" or
referes to him or herself as "the personal here is...". Thankfully those folks
learn very quickly that that language is bst left on 11 meters.

>>First you have to prove such a thing even exists.
>
>CBplusser is a definition.

WHOA! >>THIS<< from a guy who claims "putz" and "creep" are not in the
dictionary!

VIPUL! P-L-E-A-S-E provide the name and publisher of the dictionary that
defines "CBplusser"... ! ! !

>WA8ULX claims ALL no code techs are CBplussers and all that passed code are
>not
>CBplussers.

Bruce, WA8ULX, is a functionally illiterate, irresponsible and mean-mouthed
idiot. You will not find his name in contest scores, DXCC rolls, nor will you
find him proctoring VE tests or mentoring new Amateurs.

>Apparently this term is applied whether or not the person used a CB
>prior to getting a no code Ham license.

What term? "CBplusser"..?!?! There is NO such term.

>Listening to 2 meter doesn't prove anything. No difference between 2 meter
>and

>Hams that passed code at meetings. Although, I learned more about the typical
>HAM.

Judging from what you post here, Vipul, you haven't learned much of
anything at all, least-of-all Amateur Radio.

>haven't done that either.

And what is "strange" about this? People put thier cat's name, overt and
covert sexual innuendo and family names on license plates.

What is strange about putting an Amateur Radio callsign on a tag? My tag
in CA used to read "RSQ EMT". Was it strange to be proud of being an EMT
involved in rescue operations? If not, why would it be "strange" to be proud
of being a licensed Amateur Radio operator?

>>wanting to learn Morse code

You're simply mistaken, Vipul old chap.

cb is a form of land mobile radio that requires no test or license,
but requires the use of type-accepted equipment. Its basis and purpose
is completely different than that of amateur radio.

> hence it is a 2 meter CB.

Simply not true.
>
> >And one cannot tell from the license class whether someone has passed
> >a code test.
>
> Irrelevant.

It's a fact. Why is it irrelevant?

Also, one cannot tell what written tests a Technician has passed
merely by the license class.
>
> >First you have to prove such a thing even exists.
>
> CBplusser is a definition. Its a tiny step above CB.

That's your definition.

Which leaves out all classes of ham license.
>
> WA8ULX claims ALL no code techs are CBplussers and all that passed code are
> not CBplussers.

Really? I thought he was complaining about the written tests. Though
it is hard to tell.

Fun fact: The license doesn't specify whether someone took a code
test, or what speed.

> Apparently this term is applied whether or not the person used a CB
> prior to getting a no code Ham license.

It's just a put down. End of story.
>
> >What "technical knowledge" is needed to be a better operator that is

Understanding comes at many levels, too.
>
> >Operating better requires SKILL.
> >Code skill is one of the skills that
> >makes someone a better operator.
>
> Picking up signals by ear in presense of noise is also a skill.

Agreed.

> Tuning receivers by ear is also a skill.

It's a lot easier to tune them by hand!

> Adjusting for SWR is also skill.
> There are many more useful skills.

Some time back, I posted a whole list of desirable operating skills.
Perhaps I should post it again.

How does a written test of TECHNICAL KNOWLEDGE improve anyone's
OPERATING SKILL?
>
> Code skill is a skill, but only one of the skills,

That's true. It's tested because ITU S25.5 requires it. FCC says so.
That may change soon.

> and a [less] useful one that is made [most] important.

Less useful than what?

Have you ever actually LISTENED to the HF amateur bands?
>
> >> WA8ULX , lets see some information backing up your accusations.
> >
> >Don't hold yer breath while waiting...
>
> I haven't heard proof yet.

We haven't seen proof of your accusations either.
>
> Listening to 2 meter doesn't prove anything.

Sure it does. At least around here, it's very different from cb.

> No difference between 2 meter and Hams that passed code at meetings.

Nor additional WRITTEN tests of TECHNICAL KNOWLEDGE.

> Although, I learned more about the typical HAM.

From sampling how many of the ~685,000 US hams?

Here's a clue, Vipul: What you have seen at the few ham club meetings and hamfests you have attended is not the entirety of ham radio. Not by a long shot. Same for your Field Day experience.

AGREED!!
>
> Referring to demographics, Ham radio is 95% male,

How do you know? What is the source of your demographics?

> large percentage are old,

What's your definition of "large percentage" and "old"? I'm 48 - to an
8 year old, that's old. To a 78 year old, that's young. To me, it
depends;-)

> large percentage (visibly higher than general population) are overweight.

Again, what's your source of demographics? The US population as a
whole is pretty chubby (and getting worse), not just hams. Whole bunch
of reasons for that. But I'm only responsible for me. For the record,
I'm 6' 3" and about 225 pounds right now. And working on getting down
below 200.

Fact is, many Americans these days live relatively sedentary
lifestyles and eat too much of the wrong things. Me included. Has
nothing to do with ham radio.

> This
> should not matter except that the hobby must attract/create these types of
> people to have such high percentages.

Your demographics source, please? Or are these just observations from
a few ham club meetings and Field Day?

Here's a clue: Those things are not a representative sampling.
>
> Examples of strange include using codewords in ordinary conversation,

I don't know any ham who does that. A little jargon where appropriate
does the trick.

> putting call-sign on car license plate,

Never had one of those - but WHY would doing that be "strange"?

> wanting to learn Morse code,

Let's see:

- A mode used by hundreds of thousands of hams all over the world
every day
- Uses very little spectrum space
- Gets through better than any analog voice mode
- Allows use of simple and inexpensive equipment
- Has a unique human-machine interface that many find enjoyable to use
- Users report it to be a lot of fun, often to the point of being
their favorite choice

Yet you say it's "strange" to want to learn the skills to use this
mode. Why is it strange?

Do you tell people who go running, skiing, swimming, sailboating or
bicycling that wanting to do those things are "strange"? How about
people who go fishing but toss the fish back after catching it?

> hating CBers,

Regrettably, some hams do dislike cbers. Do you know why?

> Wuoff Hong,

it's "Wouff Hong", and it's a nice old tradition. Do you dislike
traditions?

> and other cult like beliefs.

Hardly.

> >You are a ham, presumably because you wish to be one.
>
> License means band access. So, there is some benefit.

You can always send it back to the FCC and they will cancel it.
>
> >With that in mind,
> >your crusade of denigration of the Amateur Radio Service just doesn't ring
> >true. What are we missing here?
>
> I do not denigrate Ham radio to non Hams.

But you DO denigrate it to anyone who reads your posts. Why all the
put-downs? What is wrong with live and let live?

> I say that I am in Ham Radio and
> praise/defend it.

Somehow I find that difficult to believe.

> I invited non-Ham to Hamfest, gave copy of ARRL handbook,
> mentioned I am Ham in social situation. It is in my benefit to improve the
> image of Ham Radio.

Do you ever actually get on the air, or build/experiment with radio?
>
> "Ham" radio is different than Amateur radio.

You are mistaken. The two terms mean the same thing.

>"Ham" radio is very much a cult.

Who is the leader, then?

> Although technically FCC licenses are given for "Amateur Radio" operation, the
> amateur radio operators like to be called "Ham" Radio operators.

Just a nickname. Quicker and easier to say and write. Means the exact
same thing. Like "truck driver" and "driver of trucks". Or "medical
doctor" and "physician".

What IS your problem, Vipul?

> A big sub-cult
> of Ham Radio operators learns a skill called Morse code.

Not just learn - they USE it. Lots of fun, too.

> Being a cult is not
> necessarily bad in itself. Ham cult does not fit my interests. I am interested
> in the "other" technical aspects most Hams are not interested in.

Then why do you denigrate what other hams do?

And what are YOU doing with those "technical aspects"? Build any
radios lately? Antennas? Other projects?

Our licenses are for operating ham rigs, so don't put down hams for
wanting to do just that.

Here are the number of unexpired FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of January 15, 2003:

Novice - 35,736 (decrease of 13,593)
Tech - 248,599 (increase of 43,205)
Tech Plus - 72,892 (decrease of 55,968)
General - 139,802 (increase of 27,125)
Advanced - 84,236 (decrease of 15,546)
Extra - 103,276 (increase of 24,526)
Total - 684,541 (increase of 9,749)

"Vshah101" <vshah101@aol.com> wrote

: Referring to demographics, Ham radio is 95% male-

Certainly a large percentage is male, just like a large percentage of deer hunters are male, a large percentage of machine knitters are female, a large percentage of flower gardeners are female, and many other situations where the participants in a particular hobby are skewed towards one gender or the other. I don't see that as "strange".

: large percentage are old,

I suppose that depends on what you define as "old". A few years ago, before the FCC stopped pubilishing the birthdate in their data, it was calculated that the average age of licensed hams was 54 years old. Just coincidentally, the state of Minnesota in the same year had stated that the average age of a licensed driver in Minnesota was 52 years old. When you think about it, that coincidence isn't surprising, since both licenses are most often first obtained in late teen/early adult years, and generally kept in force over the life of the licensee. The largest body of licensees then fall in the group from 16 to perhaps 80. The "mean" age of that group falls at 48, but the "average" age is skewed somewhat higher by the bubble of baby boomers which is moving through. Thus an average age in the low-mid 50's seems reasonable.

: large percentage (visibly higher than general population) are overweight.

Subjective opinion at best.

: Examples of strange include using codewords in ordinary conversation,

I agree that amateurs use language which contains "insider lingo" in their conversations with each other. So do members of almost any interest group/age group/profession that you'd like to name. Nothing strange about that.

: putting call-sign on car license plate

Nothing strange about that. In my home state their are all sorts of "special" license plates ..... veterans have them, college alumni have them, environmentalists have them, firemen have them, and any citizen can personalize their car license plates (for a fee). A very common thing, and not at all "strange".

: wanting to learn Morse code

Since it's part of the licensing requirements for two or the three license classes, what is strange about persons wanting to learn it? If you don't

learn it, you'd be restricted to only the Technician license class.

: hating CBers

Except for a few like WA8ULX, I don't think I personally know a single ham
who "hates" CB operators. Do you hate CB operators?

: Wuoff Hong, and other cult like beliefs.

You need to examine the definition of "cult". You are out to lunch on that!

>Subjective opinion at best.

Just go to a random Hamfest and you will see that this is true. And e-ham poll agrees that large percentage of Hams are overweight.

>Do you hate CB operators?

No, I don't. To me its another frequency, not another culture.

Also, without CBers (AND their vehical demographics), the economy would collapse. Hams are just icing on the cake, not as needed as CBers. Hams can be replaced with public servants, CBers cannot. This claim seems reasonable, but don't hold me to it - I just came up with this.

>: Wuoff Hong, and other cult like beliefs.

So, Wuoff Hong is not an example of a cult? How about pointing out the word Ham in highway signs, regularly in QST?

--> There's one on Main Street in Newington, CT. I've actually been there.

Are you kidding?, the folks there are into the cult as much as anyone.

Speaking of deprogramming, once you learn Morse code above a certain speed, you CANNOT forget it (even if you tried). You will automatically translate code from movies or whereever else you might hear code.

>"Ham" radio is very much a cult.
Who is the leader, then?

A cult does not have to have a leader, just a unified belief system. However, not all unified belief systems are cults.

-->Reading those rrcb posts confirmed my suspicions. Vipul and 'ULX -->are basically saying the same things.

WA8ULX is a pro-coder, possibly an only-coder. I am not.

-->We haven't seen proof of your accusations either.

Go to a Hamfest. Take a non-Ham so you have some reference to compare. See what non-Ham's impression is and you will know.

NO, it's not that "rec.radio.info" is non-amateur specific (it is). It's that "rec.radio.info" is SPECIFICALLY DESIGNATED AS THE PLACE TO POST "BULLETIN-TYPE" MESSAGES, of which these Newsline posts are. There are so few of these that there need not be an amateur specific version of the group. If Newsline were to post there, it's monthly traffic would double.

It's not OK to post it here because by the unified charter, it is supposed to be posted elsewhere, thus meaning that it is NOT appropriate for the policy group.

You keep bringing up this mythical "unified charter" that's supposed to
exist and support your position. In order to have a credible argument,
you must now:

- describe what this "unified charter" is

- specify where its complete text can be found

- quote specific passages from this document that support your position

The only documents that I have found that could *possibly* be this
"unified charter" are the following:

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

http://groups.google.com/groups?selm=3dead0eb%240%24202%2445beb828%40newscene.com

http://groups.google.com/groups?selm=3c3fb961%240%2459826%2445beb828%40newscene.com

and all of them allow (or do not prohibit) a reasonable amount of
cross-posting of information that is reasonably topical to all target
newsgroups. Furthermore, rec.radio.info was *SPECIFICALLY CREATED AS A
CROSS-POSTING TARGET* like rec.music.info or news.answers. I know this
because I helped create the newsgroup (with Mark Salyzyn, VE6MGS) in
late 1992/early 1993.

Hi Paul,

Great to see you posting again. Most of the old timers are gone, so it's a
real treat to see a friendly name here.

Regarding Mr. Robeson, he's kind of a newcomer so you may not have picked up
on his motto of "Everything not specifically prohibited is mandatory." (or
maybe it's the reverse of that -- he keeps forgetting.)

No, I've never seen one in an airport trying
to sell me flowers, and chanting Hare Krishna.

> How about pointing out the word Ham
> in highway signs, regularly in QST?

OK here goes, drive down I-65 in Indiana and
look for the exit sign for HAMburg, or drive
in Ohio and find the sign for HAMilton.
In the Northern part of Indiana we have
signs directing you to HAMmond

Vipul just give it up, write the FCC and
tell them you don't want your license
any more and go away! Leave us cult
loving, fat, code word speaking HAMs alone!

Irrelevant. Both of you are basically saying the same things. Both of you are
into illogical rants against anything that does not fit your narrow, biased
definitions of what the ARS should be. In other words, intolerant trolls that
are immune to the ravages of common sense.
>
>-->We haven't seen proof of your accusations either.
>
>Go to a Hamfest.

I've been to many.

>Take a non-Ham so you have some reference to compare. See
>what non-Ham's impression is and you will know.

So the impression of a single unlicensed person supersedes my own observations,
demographic facts and simple logic? Sorry, I'm not buying into that!

Here's a clue, Vipul:

- Not everyone at a hamfest is a ham.
- hamfest attendance is not a representative sample of the amateur population
- the US population, in general, is overweight

Are cbers overweight?

Source record: 59644

.....Not one single thing relevent to Amateur Radio policy, but hey...It's a snow day and I thought I'd share some profound thoughts:

1. Give a person a fish and you feed them for a day.

Teach that person to use the Internet and they won't bother you for weeks.

2. You read about all these terrorists--most of them came here legally, but they hung around on these expired visas, some for as long as 10-15 years.

Now, compare that to Blockbuster: you're two days late with a video and those people are all over you. Let's put Blockbuster in charge of immigration.

3. How is it one careless match can start a forest fire, but it takes a whole box to start a campfire?

4. Health nuts are going to feel stupid someday..... lying in hospitals dying of nothing.

5. The other night I ate at a real family restaurant. Every table had an argument going.

6. Have you noticed since everyone has a camcorder these days, no one talks about seeing UFOs like they used to.

7. According to a recent survey, men say the first thing they notice about a woman is their eyes, and women say the first thing they notice about men is they're a bunch of liars.

8. Whenever I feel blue, I start breathing again.

9. All of us could take a lesson from the weather. It pays no attention to criticism.

10. Have you noticed that a slight tax increase costs you two hundred dollars, and a substantial tax cut saves you thirty cents?

11. In the 60's people took acid to make the world weird. Now the world is weird and people take Prozac to make it normal.

12. Politics is supposed to be the second oldest profession. I have come to realize that it bears a very close resemblance to the first.

13. There is a theory which states that if ever anybody discovers exactly what the Universe is for and why it is here, it will instantly disappear and be replaced by something even more bizarre and inexplicable. There is another theory which states that this has already happened.

14. I read recipes the same way I read science fiction. I get to the end and I think, "Well, that's not going to happen."

15. Some people are like Slinkies . . . not really good for anything, but you still can't help but smile when you see one tumble down the stairs.

I also "decode" Spanish and German. So what?

>A cult does not have to have a leader, just a unified belief system. However,
>not all unified belief systems are cults

The you do not understand what a cult it, how it is created or
promulgated.

>WA8ULX is a pro-coder, possibly an only-coder. I am not.

As it is impossible to hold ANY class of Amateur Radio license in teh
United States based solely upon the passing of Morse Code test, WHAT is an
"only coder"...?!?!

Or is this another one of those definitions we CAN'T find in
Webster's...?!?!

>Go to a Hamfest. Take a non-Ham so you have some reference to compare. See
>what
>non-Ham's impression is and you will know.

Without some common frame of reference, how can a "non-Ham" make ANY
comparison...?!?!

And I find it VERY funny that YOU use the term "Ham" in your posts, yet
you deride the use of the term by anyone else.

If you are going to promote a concept as being the "right" way, Vipul, you
should conduct yourself by your own standards! Ergo I shall expect to no
longer see you using the term "Ham" in any original text from now
on...right???

Also, if Amateurs should not call themselves "Hams", what are you going to
call those events that you suggest we take "non-Hams" to?

I got an idea: "Non-Professional Radio Hobbyist Seminar, Social and
Exhibiton"...

Naaaw...Hamfest it is...

>Sounds like a good thing.

I am sure it is "radio urban legend", but it reminds me of the story of a bunch of union radio operators playing poker in the union hall while waiting for an announcement for a ship to sail with. Half way through a hand, one of them pauses for a second, then abruptly folds and excuses himself from the table. He returns a few minutes later with sailing orders in hand.

His friends are stunned as they didn't hear any announcement. When asked how HE heard the announcement and they didn't, he said "Simple, they sent a message over the PA in Morse that said "Immediate sailing orders available for the first radio operator to present himself to the clerk with this message" !

My kinda radio operator, fiction or otherwise!

>maybe it's the reverse of that -- he keeps forgetting.)

Hans, you're going to have to show me where anything I said was germane to Paul's comments. I think YOU are once again confused.

I am not the one suggesting what should be prohibited from the NG...Mr. Stussy is.

The only time I make a point of rubbing anyone's nose in "Amateur Specific" suggestions is when Lennie goes off on one of his tirades that is OBVIOUSLY not Amateur Radio related, and then ONLY because he is prone to "redirect" anyone when they dare stray from a topic that HE wants to "discuss".

>
> My kinda radio operator, fiction or otherwise!

It's almost certainly an urban legend for the following reason: A
Morse mesage on the PA would have been noticed by everyone.

It's probably a retelling of a much older story, generally accredited
to a railroad superintendent's office in the days when the RRs used
the landline telegraph for communications. The clacking of sounders
was a common-enough background in any RR station or office in those
days.

The story has it that the super advertised a job for an assistant, and
many candidates showed up. Such jobs were coveted because they were
often the starting place to much bigger things.

Secretary had them wait in the outer office, saying the super would
see them when he was available. Took their names, times of arrival,
etc. They all sat around waiting to be called.

Finally a young man walks in, pauses, heads right for the door to the
super's private office and walks in like he owns the place. Comes out
in a few minutes and says the others can leave - job's been filled.
They figure the fix is in and the youngster must be a relative or

something, but the super comes out and tells them what the sounder has been sending all the time they've been waiting:

"if you can read this, come into the office"

Probably an old boomer's tale, but ya never know. Stranger stories have been found to be true.

The one that is a single charter for the entire rec.radio newsgroup hierarchy.
It has been posted to the groups, although not recently. I think the last time
it was posted was over a year ago. Try looking for it under the domain that
"hosts" (i.e. started) the hierarchy - hawaii.edu.

"Unified Charter": http://www.faqs.org/faqs/radio/personal-intro/

Titled: Guide to the rec.radio Newsgroups.

It is clear that it means that "Newsline's" posts are permitted for rec.radio.info and NOT acceptable for "rec.radio.amateur.policy" (since the majority of its content is not policy related, even if just "one story" is).

Upon re-reading it, I withdraw my comment regarding cross-posting where one group is "rec.radio.info", but that section of the document does indicate that the other area(s) an "rri" post is cross-posted to must be on topic. In this respect, "rrap" is still not an appropriate place for "Newsline" to be posted (cross-posted or not).

Looking at http://www.ibiblio.org/usenet-i/groups-html/rec.radio.info.html, "AR Newsline" is listed as one of the things that is supposed to be posted to "rri" (as of January 1996). Clearly, not all of the items authorized for "rri" (by listing) are still posted regularly, but that doesn't change the fact that they should or shouldn't be (should they reoccur).

5 words per minute.

Just kidding. Code class said 13 words per min according to certain studies.

>>>"Ham" radio is very much a cult.
>
>Naw, just a lot of fun for a lot of folks.

Who said it can't be a fun cult?

>So the impression of a single unlicensed person supersedes my own
>observations,
>demographic facts and simple logic? Sorry, I'm not buying into that!

Its a comparison, if Ham radio is normal to the non Ham. Due to codewords, you may have to explain things to the non-Ham. Then after the non-Ham understands, the non-Ham will still think Hams are strange.

>- Not everyone at a hamfest is a ham.

True, spouses and children of Hams attend.

>- hamfest attendance is not a representative sample of the amateur population

Even if this were true, field day is representative, since almost all Hams participate. Field day remarks were similar to Hamfest remarks.

>Are cbers overweight?
They probably are, since most Hams are CBers. I don't know CBers, as I went straight to Ham.

From K4YZ:
> As it is impossible to hold ANY class of Amateur Radio license in teh
>United States based solely upon the passing of Morse Code test, WHAT is an
>"only coder"...?!?!

An only coder like to only use code, but has little grasp of the technical material. Since the written test is so easy, it is very possible to be an only-coder.

>And I find it VERY funny that YOU use the term "Ham" in your posts, yet
>you deride the use of the term by anyone else.

When? I am aware of using Ham vs amateur, but I may slip. Any such usage is a slip, so its not inconsistant.

Also, I didn't say Hams did not exist. The license is for amateur radio operation. Most of those who holds one like to be called "Hams". I can call people Hams if they call themselves Hams.

> Also, if Amateurs should not call themselves "Hams", what are you going
>to
>call those events that you suggest we take "non-Hams" to?

The term Hamfest is correct because it reflects the nature of those that attend - Hams.

A cult need not be public to be a cult. Actually, it is a sub-cult of Ham radio, just like Morse code is.

At midnight at certain Hamfests you make a secret pledge about operating radio certain way. Then you are a member of Wouff Hong.

Sounds like a cult to me.

>OK here goes, drive down I-65 in Indiana and
>look for the exit sign for HAMburg

Yes, just like that. But in QST these "spottings" are more cute.

What he sez.

In fact, as I was the first moderator of the group, I actively
supported and demanded for cross-posting for several reasons:

1) info messages were sometimes viewed as `noise' or `volume' in
discussions, all popular newsreaders can deal with filtering out the
info messages by recognizing the cross posting group it belongs to.
This gave a much needed control over content for the readers of the
groups.
2) When in info, one also needs a clue as to which group was pertinent
to the content, so if one saw rec.radio.space, one would know it was a
set of Keplerians.
3) Cross posting good, multiple posting is bad.
4) With the additional expiration and controls a moderator could place
on information postings, one could ensure that the articles remained
persistent on the news servers, always available when they were
timely, rec.radio.info cross posting along with the Moderator's stamps
gave the credentials necessary to maintain this control. Expiry on a
server was very much an issue at the time with the explosive growth of
the usenet.
5) Cross posting also permitted automated archiving of the information

articles that made sense.

Web based posting notwithstanding ...

Sincerely -- Mark Salyzyn ex-VE6MGS :-(

BTW, this is the first posting to USENET in 5 years since my
retirement from moderating rec.radio.info.

>>- hamfest attendance is not a representative sample of the amateur
>population
>
>Even if this were true, field day is representative, since almost all Hams
>participate.

"almost all hams participate"?? You are very mistaken. Check out how many participated in FD 2002 and compute the percentage of US hams who participated.

>Field day remarks were similar to Hamfest remarks.

By whom?
>
>>Are cbers overweight?

>They probably are, since most Hams are CBers.

>I don't know CBers, as I went
>straight to Ham.

Really? Then when did you operate HF, as you claimed in another post? And why all the posts to rec.radio.cb?

Mark!

What a blast from the past! I am *honored* to have our esteemed Charter Moderator of the rec.radio.info newsgroup back in the rec.radio.* newsgroups. One side effect of being around for a long time is that you can detect the historical revisionism starting :-).

>1) info messages were sometimes viewed as `noise' or `volume' in
>discussions, all popular newsreaders can deal with filtering out the
>info messages by recognizing the cross posting group it belongs to.
>This gave a much needed control over content for the readers of the
>groups.

A very good point. There was (and still is) no strict consensus about where bulletin and FAQ postings should be posted. Some wanted them

segregated to their own newsgroup, others were *adamant* that such articles should remain in the newsgroups in which they already appear, and not be "stolen" by by being placed in "yet another newsgroup." Simultaneous cross-posting, combined with use of fully-featured, standards-compliant, newsreaders, would make everyone happy by giving them the power to custom-tailor their reading path to their preferences.

>2) When in info, one also needs a clue as to which group was pertinent
>to the content, so if one saw rec.radio.space, one would know it was a
>set of Keplerians.
>3) Cross posting good, multiple posting is bad.

The America On-Line (AOL) newsreader is notoriously bad in this respect by only permitting articles to be separately posted to one newsgroup at a time. AOL tends to take the attitude that anything that *COULD* be abused needs to be tightly controlled, even if that keeps responsible users from doing the best thing.

Sorry to sound curmudgeonly, but much of today's newsreader software has taken a giant step backwards. The most notorious offenders are those included with web browsers and some on-line services like AOL. The original "rn" newsreader (now about 20 years old) trumped all of them by providing:

- simultaneous cross-posting to at least a reasonable number of newsgroups

- the ability to edit all news article headers, especially Newsgroups and Followup-To

- a warning to the poster about inherited newsgroups on followups, and requiring the poster to review and edit the Newsgroups header before posting those followups

- a famous warning to the poster about the expense borne by all sites carrying Usenet News to store and forward their article, encouraging the poster to think carefully before posting:

"This program posts news to thousands of machines throughout the
entire civilized world. Your message will cost the net hundreds
if not thousands of dollars to send everywhere.

Are you absolutely sure that you want to do this? [yn]"

- a "kill" file to enable the reader to take unwanted articles out of their reading path

>4) With the additional expiration and controls a moderator could place
>on information postings, one could ensure that the articles remained
>persistent on the news servers, always available when they were
>timely, rec.radio.info cross posting along with the Moderator's stamps
>gave the credentials necessary to maintain this control. Expiry on a
>server was very much an issue at the time with the explosive growth of
>the usenet.

>5) Cross posting also permitted automated archiving of the information
>articles that made sense.

Items 4 and 5 were very important in the early days of the net, when
on-line resources like DejaNews (later Google Groups) simply didn't
exist. Even nowadays, it's convenient to go to:

http://groups.google.com

and filter searches by the criteria:

"group:rec.radio.info"

>Web based posting notwithstanding ...

>Sincerely -- Mark Salyzyn ex-VE6MGS :-(

>BTW, this is the first posting to USENET in 5 years since my
>retirement from moderating rec.radio.info.

I hope we can hear from you more often, and that we can look forward to
you recovering an amateur radio license (in the U.S., Canada, or both)
in the near future.

You ask for signs I gave you signs and where to look for them.
You didn't say anything about them having to be "cute"!

Admit it Vipul you don't like hams or ham radio!
What you do like is getting on the NG and trying
to start stuff by saying things to get us upset.

You should follow the advice of Groucho Marx
when he made the following statement.

"I don't want to belong to any club
that will accept me as a member."

Think about it Vipul, it's not to late
to get that license of yours cancelled.

The quote is from the book "Murphy's Law and 1001
reasons why things go wrong". I don't know who Peer
is either. I've seen some of the postings with "wisdom"
from the Prophet Bokonon in Vonenegut's book
"Cat's Cradle", but I don't think I'll be reading it any
time soon. It sounds kinda dry to me, but on the other
hand I'm sure the stuff I read would boar others to
tears as well.

Life is just like Ham Radio, there are plenty
of things for everyone to enjoy! Poor Vipul
will go nuts if he starts thinking about that statement! ;^)

>Correct.

The problem with that, Vipul, is that Larry has made it VERY clear that he does NOT use "only" code.

And your suggestion that Morse Code as an "only" qualification still rings hollow. There is NO Amateur Radio license issued based soley upon passing of a Morse Code test. You are still in error.

>you
>may have to explain things to the non-Ham. Then after the non-Ham
>understands,
>the non-Ham will still think Hams are strange

So, Vipul...NO other hobby, avocation or occupation has language specific
to it's activities that may not be understood by non-participants...?!?!
NASCAR?...Astronomy?...Knitting?...Rodeo riding?...etc..etc...etc...

And you have yet to define "codewords". The FCC has defined "codes" as
willful attempts to misconvey the actual intent of the message.

There is nothing secret nor sinister about abbreviations or "lingo" used
by Amateur Radio operators. So what codewords are you refering to?

>>- hamfest attendance is not a representative sample of the amateur
>population
>
>Even if this were true, field day is representative, since almost all Hams
>participate. Field day remarks were similar to Hamfest remarks.

"...since almost all Hams participate." Hmmmmmm....To ME. "almost all" is
a large percentage...Better that 75% certainly. Are you going to tell me that
over 425,000 Amateurs participated in last Field Day, Vipul?

I have only seen ONE club that ever mustered more than a fractional part
of it's membership that participated in Field Day, and that was because the
club was specifically organized FOR Field Day.

I have the December 2002 QST in my lap. Although I did not tally up the
numbers, I did run through the "number of participants" column. I am pretty
darned sure you won't come up with 50% of the present Amateur licensee database
as having participated. And please note that says "PARTICIPANTS"...There only
need be ONE FCC licensee presnt to be "legal"...MANY Field Day activities have
several "participants" who are not licensees.

And I see YOU continue to use the term "Ham" even though you villify it's
use by Amateur Radio participants in general. So which way is it to be, Vipul?

"Ham" radio is OK to use by anyone, or JUST you?

>>Are cbers overweight?

>They probably are, since most Hams are CBers. I don't know CBers, as I went
>straight to Ham.

Again, the use of a near-absolute. The use of an adjective like "most", in the context you use it, means a near-total number. Again, using 75% as a milestone, are you telling me that 75% of ALL Amateurs are also active on CB radio?

From where do you get these numbers? What poll was conducted to determine this?

Have you walked through the parking lot of a Hamfest to peer in the cars of Hams to see if they have a CB?

Do you eve's drop on conversations to listen for "codewords" like "10-4" or "good buddy"...?!?!

And how do you know that the car belongs to a "Ham" if the callsign is not on the license plate (which YOU consider strange)...?

Even if there IS a CB in the car, how do you know it is used by the Ham, and not by another driver (spouse, child) of the licensee?

You raise more questions than you answer, Vipul. Not good.

Steve, K4YZ

>Message-id: <20030117192545.01476.00000038@mb-mk.aol.com>

>An only coder like to only use code, but has little grasp of the technical
>material. Since the written test is so easy, it is very possible to be an
>only-coder.

And from WHAT source, reference or poll did you acquire this information?

Since you disclaim using Morse Code, how is it that you seem to "know"
what it is they do or don't know?

And on what basis do you assert the test is "easy"..? That it MAY have
been easy for YOU...?

And by the very fact that the (HF) licensee must take a written test, there
can be no such thing as an "only-coder". The test tests for knowledge in other
modes as well. Morse is the only one that PRACTICAL skill is demonstrated.

>>And I find it VERY funny that YOU use the term "Ham" in your posts, yet
>>you deride the use of the term by anyone else.
>
>When? I am aware of using Ham vs amateur, but I may slip. Any such usage is a
>slip, so its not inconsistant.

It's VERY consistant. This very day you have used it numerous times in
this and other threads and posts.

>Also, I didn't say Hams did not exist. The license is for amateur radio
>operation. Most of those who holds one like to be called "Hams". I can call
>people Hams if they call themselves Hams.

So by this Vipullian logic, if a black person uses the "N" word, it's OK
for me to do it?

And then kike, spic, mick, wetback and whatever other derogatroy terms are
OK if I hear someone else use them?

Rags? Camel jockeys? Am I getting a bit close to home?

Are you getting the picture that if you are going to label some term as
offensive, then you yourself should refrain from it's dissemination?

If you are going to label the term "Ham" as somehow demeaning or
derogatory, why do YOU insist on using it?

>The term Hamfest is correct because it reflects the nature of those that
>attend
>- Hams.

So, by virtue of having been to a Hamfest yourself, YOU are a "Ham"...?

I am just trying to unravell the Vipullian logic here. It's very
confusing.

>

If the term "Ham" is derogatory then we MUST start using the the new
term Amateurfest. This place is beginnning to sound like George Orwell's
1984, there is more "New Speak" being spoken here than American English.

> So, by virtue of having been to a Hamfest yourself, YOU are a
"Ham"...?

Steve don't even kid around about Vipul being a Ham,
that statement hurts us hams is worse than any of the
bad things he has said about the ARS.

Him having an Amateur Radio license makes him no
more of a ham than going into a McDonalds would
make him a hamburger!

>
> I am just trying to unravell the Vipullian logic here.

"Vipullian logic", the newest of the oxymoron statements
like "Army Intellegance" "friendly IRS" or "Social
Security"!

>It's very
> confusing.
>
> Steve, K4YZ

Not anymore to me, he will say anything to argue and
start trouble here. He just doesn't use the personal
attacks that some of the other vultures in here use.

That's incorrect. I almost always separate amateur vs Ham. Any time I used the word "Ham" improperly, it must have been a slip.

>> >The term Hamfest is correct because it reflects the nature of those that

>> >- Hams.
>>
>
>If the term "Ham" is derogatory then we MUST start using the the new
>term Amateurfest.

Except, its not an Amateurfest. Its organized by Hams for Hams, and Hams attend. Therefore its a Hamfest.

I didn't say Ham is derogatory. Hams are often very skilled in antennas, contesting, and Morse code. Hams are often into the Ham traditions and culture. It is possible other radio amateurs have the license, do not call themselves "Ham", and are interested into the other aspects, and not into the Ham culture.

Bert
I know he has an Amateur Radio license, but that don't make him a "Ham".
Just like the statement "anyone can be a father, but it takes someone
special to be a "Dad". If Vipul was a "Ham" he wouldn't be attacking the
ARS with it's traditions, trying to change it into something it's not.

BTW I'm ok with calling me Bill, William, or WW
I just don't want to be called late for supper! ;^)

>> >- Hams.

Point of clarification here.

Ol' Vipul makes a big point of differentiating "Hams" and "radio amateurs", as
if the two were not one and the same thing. Same for "ham radio" and "amateur
radio".

Nobody else makes this distinction, just Vipul. It seems to suit some purpose
amidst the foma he spouts here.

He sees "Hams" as being generally old, fat, speaking in jargon, technically
ignorant and focused on operating (particularly Morse), while "radio amateurs"
are technical geniuses of some sort who eschew all the other characteristics of
"hams".

The idea that "hams" and "radio amateurs" are the same thing, and that their
interests vary over an enormous range is beyond his grasp.

For example, consider poor ol' broken down me. Been licensed 35 years, but I'm
only 48. Only a few pounds above recommended weight for my height, and that's
changing (ran 3 miles this morning in 9 degree weather, f'r instance). I know
lots of abbreviations and Q signals but only use them when needed. Love to
operate, particularly Morse and contests, but also ragchewing and 2 meter FM.
Also love Hamfests, club meetings and Field Day.

Rigs, test equipment and antennas are all either homebrew, built from kits or
resurrected from basket-case condition. No "appliances" in the N2EY shack!

So am I a "Ham" or a "radio amateur"? To me there's no difference - nor to
anybody but Vipul.
>
>If the term "Ham" is derogatory then we MUST start using the the new
>term Amateurfest. This place is beginnning to sound like George Orwell's
>1984, there is more "New Speak" being spoken here than American English.

The term you seek is "electropolitically correct".

>> So, by virtue of having been to a Hamfest yourself, YOU are a
>"Ham"...?
>
>Steve don't even kid around about Vipul being a Ham,
>that statement hurts us hams is worse than any of the

>bad things he has said about the ARS.

As evidenced by his posts in rec.radio.cb
>
>Him having an Amateur Radio license makes him no
>more of a ham than going into a McDonalds would
>make him a hamburger!
>
HAW! But there's a lot of truth in that...
>>
>> I am just trying to unravell the Vipullian logic here.

>"Vipullian logic", the newest of the oxymoron statements
>like "Army Intellegance" "friendly IRS" or "Social
>Security"!

Ya beat me to it! Also try:

jumbo shrimp
nondairy creamer
tight slacks
feminist humor
>
>>It's very
>> confusing.
>
>Not anymore to me, he will say anything to argue and
>start trouble here. He just doesn't use the personal
>attacks that some of the other vultures in here use.

Instead, he insults and derides all of us. Same game as 'ULX and K4YZ's
nemesis, just played from a different angle.

Note that Vipul never says what he thinks ham radio should be, what he does, or
what he wants. Only what he doesn't like and doesn't want.

btw, it was 16 vestal virgins that he was expecting, but they left for the
coast.

> That's incorrect. I almost always separate amateur vs Ham. Any time I used
the
> word "Ham" improperly, it must have been a slip.

Then just what do YOU consider YOURSELF, a ham or an amateur radio op?

>
> >> >The term Hamfest is correct because it reflects the nature of those
that
> >> >attend
> >> >- Hams.

Word Web computer dictionary says the word ham means;
1. Thigh of a hog (usually smoked)
2. An unskilled actor who overacts

Are you saying those who attend a "HamFest" are hogs or unskilled actors?

> >>
> >
> >If the term "Ham" is derogatory then we MUST start using the the new
> >term Amateurfest.
>
> Except, its not an Amateurfest. Its organized by Hams for Hams, and Hams
> attend. Therefore its a Hamfest.

But Vipul we arn't Hams we are Licensed Amateur Radio Operators, so we
can't have a Hamfest they have to be called Licensed Amateur Radio
Operator Festivals because that is who puts them on. Or if you really want
to get picky about it, they would be Local Licensed Amateur Radio Operator
Club/Organization Festivals.

>
> I didn't say Ham is derogatory. Hams are often very skilled in antennas,
> contesting, and Morse code. Hams are often into the Ham traditions and
culture.
> It is possible other radio amateurs have the license, do not call

themselves
> "Ham", and are interested into the other aspects, and not into the Ham
culture.

Amateur Radio = Ham Radio no matter what kind of spin you try to put on it.
If you don't like code words, or Morse code, or any other part of Amateur
(Ham) radio, don't do it. Just enjoy the hobby for what you like of it and
stop trying to tell the rest of us how wrong we are.

Amateur Radio Newsline™ Report 1327 – January 17, 2003

Amateur Radio Newsline report number 1327 with a release date of Friday, January 17, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australian telecommunications regulators oppose the Amateur Radio fix for 40 meters and hams on Fiji provide aid in the wake of cyclone Ami. These stories are first on Amateur Radio Newsline report number 1327 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM ISSUES: AUSTRALIAN REGULATORS FAVOR 40 METER STATUS QUO

A disagreement over the future of the 40 meter band between Australia’s national amateur radio society and that nations telecommunications regulators. The Australian Communications Authority -- the A.C.A. favors the status quo. The Wireless Institute of Australia says its time for a change. From Brisbane, Q-News Graham Kemp, VK4BB, picks up the story:

--

The 7 MHz issue. Currently A.C.A. is against the motion at WRC 2003 -- which is of course at variance with the current allocation in Australia. At present the A.C.A. are steadfast in their opposition to the motion notwithstanding numerous attempts at lobbying them. The WIA position is in support of the IARU motion and WIA will continue to lobby A.C.A. to support the full 300 kHz allocation at 7 MHz on a world wide basis.

WIA President Ernie has asked: "If anyone can think of any additional justification that we can provide to A.C.A. to make them change their minds please let the A.C.A. Liaison Committee know and we will try and push the matter with A.C.A. again".

--

What impact the A.C.A.’s stand will have on the outcome of WRC 2003 cannot be assessed at this time.

**

RESCUE RADIO: CYCLONE AMI HITS FIJI

A Cyclone named Ami has torn across parts of Fiji, destroying homes and unleashing floods across northern islands. And it appears that once aghain, Amateur Radio has come to the rescue, It all happened on January 14th. Amateur Radio Newsline’s Jim Meachen, ZL2BHF, has what we know so far.

--
Packing sustained winds in excess of 90 miles per hour and gusts of 125 miles an hour, the Cyclone Ami whipped up mountainous seas, cut communications and left the tourist hub of Labasa, on the main northern island of Vanua Levu, under four feet of water. All normal lines of communications with Vanua Levu were cut at about 17:00 GMT as the storm approached. Vanua Levu is where a quarter of Fiji's 800,000 people live.

According to news reports, emergency officials did manage to restore partial communications with Labasa and the town of Savusavu late on Tuesday using Amateur Radios circuits. Over them they learned that Labasa was under four feet of water after a nearby river overfload its banks. Also that there had been extensive damage throughout the area.

But even these communications efforts were hampered by extensive flooding. Also, the extent of the involvement of hams is still unclear since news reports did not give the names or call signs of the operators handling the emergency operations.

Here in New Zealand the government has already sent an air force surveillance plane to assess damage. Another aircraft was scheduled to arrive in Fiji the same day and, carrying aid experts and some relief supplies.

For the Amateur Radio Newsline, I’m Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand.

--

The cyclone is the second to hit the South Pacific in as many weeks. Thousands of inhabitants of a remote part of the Solomon Islands chain northwest of Fiji survived powerful Cyclone Zoe, which hammered the area with 190 mph winds.

**

RESCUE RADIO: HAMS AID IN WAKE OF TYPHOON ZOE

And speaking of Cyclone Zoe, ham radio is helping in recovery efforts following that storm after it hit the Solomon Islands a few weeks ago. Jeramy Boot, G4NJH, is in Nottingham England has more:

--

Students and graduates of the Solomon Islands Amateur Radio Training School have been on the air from the capital Honiara in the wake of Cyclone Zoe.

The storm hit the islands of Tikopia and Anuta in the Solomon's remote Temotu Province last week. The amateurs are volunteers at the National Disaster Management Organisation and are providing assistance to the staff of three at NDMO HQ during the current state of disaster in the Solomons.

Using donated equipment received last year fromoverseas amateurs and CB operators, the first on the air was Moffet, H44MD. He was told that three 100-watt HF transceivers were donated by an American amateur and sent by air mail three weeks before the cyclone.

--

As we go to air, reports say that the Solomon Island radio school graduates are still providing post cyclone aid. (GB2RS)

**

COMMUNICATIONS LAW: BIG BROADCAST TOWER WIN IN NH

Back here in the United States, a big tower case win for a broadcaster could have a trickle-down effedt for ham radio. This, after the New Hampshire Supreme Court has rejectes a city's zoning ordinance limiting the height of new communication towers to 42 feet. It says that regulation conflicts with federal law.

The ruling clears the way for Koor Communication Inc. to obtain local construction permits to begin constructing broadcast towers for WQTH-AM in Lebanon, New Hampshire. According to Radio World Online, Koor Communications first filed for variances to the ordinance in 1999 seeking to construct four antennas to the height of 266 feet in accordance with its FCC license and Construction Permit. The broadcaster's attorneys argued that Lebanon's restrictions effectively prohibited the construction of new radio stations.

Koor Communication lost several lower court decisions. This lead to the appeal to the state's highest court. That court has now said the lower court findings were incorrect and it reversed their rulings. (CGC Commuinicator, RW-ONLINE)

**

ARRL: BOARD IS MEETING

The American Radio Relay League’s Board of Directors is holding its first meeting of 2003 as this newscast goes to air. For a full wrap-up on what actions the Diirectors might take, go to the news pages on the ARRL website. Its easy to find at www.arrl.org. (ARRL)

**

ENFORCEMENT: HAM JAILED FOR SPYING FOLLOW-UP

Two interesting follow-ups to last weeks story on convicted spy Robert Hanssen, K9QVL. The first came in a note from the FCC which takes issue with our account.

It says and we quote: “the assertion that we need a complaint to pull Hansen's ticket or anyone else's ticket is dead wrong.” Endquote.

But thats all the spokesman says. No other information was provided.

The other item is even more interesting. After the story ran, we began getting reports that Hanssen's call had been deleted. We went over and checked the FCC's database. It was still there. It was also on the Buckmaster websire, but ther was a surrprise when you inputted the K9QVL call over on QRZ.com. It came back stating that the K9QVL listing was no longer in the QRZed database. (ARNewsline™)

**

ENFORCEMENT: FCC RESCINDS ND8V WARNING LETTER

The FCC has canceled its recent warning letter issued to Michael Gurnsey, ND8V, and has told the Parchment Michigan ham he can resume operation on the 20 meter band.

As reported last week, the agency's Riley Hollingswoth, K4ZDH, had written a very sternly worded letter to Gurnsey. It stated that it would initiate stern punitive action against him if it received any more complaints that he was appropriating certain frequencies on the 20 meter band. It also told him to stay off 2o meters until the issue could be resolved.

But on January 3rd the Hollingsworth wrote to ND8V once again. This time it told Gurnsey that he could disregard the warning letter and resume 20 meter operation. It also went on to thank him for his cooperation in resolving the matter. No further information was provided by the FCC. (FCC)

**

ENFORCEMENT: NY HAM FACING REVOCATION

The FCC has written to a New York city area ham telling him he may face license revocation proceedings. The Commission's Daryl Duckworth, NN0W, explains:

--
Duckworth: "A Warning Notice and Notice of Intention to Designate a Revocation and Suspension Proceeding was issued to Alexander Sandbrand N2NNU for operation outside of his Technician class priveleges on numerous occasions and after warnings."
--

Sandbrand lives in Yonkers New York. That's a few miles due North of Manhattan. Back on August 17th of 2001 the FCC issued Sabndbrand a first Warning Notice regarding operation outside of his license privileges. The Commission says it now has information indicating that at least nine times since his receipt of that initial warning that Sandbrand operated out of band.

And in a related item, the ARRL Letter reports that Sandbrand called FCC rulers enforcer Riley Hollingsworth after receiving the first Warning Notice. He reportedly complained that it wasn't fair that he had to pass additional examination elements to operate on High Frequency phone. Hollingsworth supposedly told Sandbrand that if he wants to operate on H-F, he has to take the test like everybody else. (FCC, ARRL Letter)

**

RADIO LAW: TEEN ARRESTED AND CHARGED IN DIREC TV CASE

A 19-year-old college has been taken into custody on charges that he pilfered information about a new security system used by satellite broadcaster Direc TV and distributed it over the Internet. FBI agents in Los Angeles say that they arrested Igor Serebryany and have charged him with stealing information related to DirecTV's latest access cards. These are the access cards Direc TV uses to regulate what services its subscribers will receive.

According to several news reports, Serebryany who is identified as a University of Chicago student, allegedly took the information from a Los Angeles area law firm that was doing legal work for Direc TV. He ithen is supposed to have distributed it to web sites dedicated to the hacking of DirecTV's security systems.

According to the criminal complaint against Serebryany, DirecTV spent more than $25 million developing the high security "Period 4" card. This, after the three previous versions had been successfully hacked by pirates. Serebryany faces up to 10 years in prison, a fine, or both, if convicted. (Published news reports)

**

RADIO LAW: FCC SIMPLIFIES FILING PROCEEDURES WITH ECFS EXPRESS

The Federal Communications Commission has launched ECFS Express. This is a simplified version of its Electronic Comment Filing System or ECFS.

According to an FCC news release, ECFS Express is designed specifically with the consumer in mind. The FCC claims that it is easy to use, focuses on topics rather than docket numbers, and requires minimal input by consumers seeking to participate in the Commission’s public rulemaking process. People wishing to comment simply click on a topic, fill in their personal information, write their comments and hit “send.”

To access ECFS Express, users need only click on the “File Comments” logo found on the front page of the FCC’s Web site at www.fcc.gov The original version of the Electronic Comment Filing System, which includes all docketed Commission proceedings is still at the FCC website as well. (FCC)

**

COMMUNICATIONS LAW: A WARNING TO DOMAIN NAME SELLERS

A warning to Internet domain-name sellers. Keep better track of your customers or Congress will be forced to step in.

The warning comes from California Representative Howard Berman. He claims that domain-name sellers have an obligation to keep accurate records of their customers to ensure they can be contacted if they are improperly using trademarked names or engaging in other illegal activity.

According to Berman. Internet users must provide a contact name, address and other information when they buy a domain name. But the Congressman says that few name sellers run checks to make sure that the contact information is

accurate. Berman says that this lax oversight allows scam artists and cybersquatters looking to sell domain names to their rightful owners or others to hide their true identities. This he says, provides a barrier for law-enforcement officials investigating such crimes.

Berman says that he would like to see all the top-level domains start to implement these types of checks on their systems. He also warns that if self regulation does not work that Congress may have to step in. (Published news reports)

**

THE WAR ON TERRORISM: NYC REBUILDS WITH A NEW TV TOWER IN NEW JERSEY

A broadcast tower almost a half mile high to replace the structure lost when terrorists felled New York's World Trade Center could rise across the Hudson river in New Jersey. This, as an alliance made up of eleven broadcasters release a report as to why they favor proposed site in Bayonne over one in Jersey City. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--
In a 17-page letter to New Jersey's environmental commissioner, the broadcasting alliance says the new tower would restore quality television reception for about three quarters of a million people in the metropolitan area. This is especially important to the regions poor and elderly who cannot afford to pay for cable or satellite reception. And the alliance called the Bayonne site far superior in terms of size, security, environmental concerns, cost and construction timetables.

And the groups president, Edward Grebow said the $200 million project would also be a boon to construction workers in the region. He also noted that the city of Bayonne wants to make the tower a central element in plan to transform the location into an area of offices, homes, stores and marinas. In addition to its television antenna system, the alliance suggests that the structure might also be used for scientific studies. This could include long term investigations into weather, climate and air pollution.

If constructed the new tower would not only become the world's tallest free-standing structure. It would also be the worlds tallest broadcast tower built at near sea level. For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

While New Jersey has the support of the regions broadcasts, other locations are still believed to be under consideration by local politicians and community leaders. (ARNewsline™ from listener reports)

**

EMERGING TECHNOLOGY: GENERATING ELECTRICITY WITH HOT AIR

Meantime, another would-be tallest man-made structure could soon be towering over the Australian outback. This, as part of a plan to capitalize on the global push for greater use of renewable energy.

By 2006, the Australian power company EnviroMission Ltd hopes to build a 3,300 foot high solar tower in southwest New South Wales state. The 200 megawatt solar generating station will cost nearly $563 million dallars to build and will be the width to a football field.

The technology behind its operation is very simple. The sun heats air under the tower’s glass roof. As the hot air rises, a powerful updraft is also created by the tower that allows air to be continually sucked through 32 turbines, which spin to generate power.

EnviroMission hopes to begin construction on the solar tower before the end of the year. It says that it plans on generating enough electricity to supply 200,000 homes around the beginning of 2006.

Currently, the world's tallest free-standing structure is the Canadian National Tower in Toronto. Its about 1650 feet high. (W8HDU)

**

CHANGING OF THE GUARD: DON MACKAY, ZL3RW - S.K.

The changing of the guard in Amateur Radio continues. This, with word that NZART Honorary Life Member and Past President Don Mackay, ZL3RW has passed away.

MacKay died at his home in Christchurch on January 14th after a long illness. Among his many accomplishments was his work in the introduction of Amateur service repeaters to New Zealand. This, at a time when that nations Post Office was opposed to such operation.

ZL3RW used his experience in emergency communications to sway the agencys decision in favor of permitting repeater operation. For many years it was this aspect of Amateur Radio that ensured their continuation.

Don MacKay is survived by his sister Margaret. A service in celebration of his life was held Saturday January 18th in the city of Christchurch. (NZART)

**

HAM RADIO IN SPACE: NO PACKET TO THE ISS
Packet users are being requested to not send e-mail messages to the all ham crew on board the International Space Station at this time. This, according to the AMSAT News Sercice which reports that they are not answering e-mail, and are realkly not expected to do so in the near future. No specific reason was given, but according to news reopprts the current all ham crew is very busy with many non ham radio related on-orbit duties. (ARISS)
**

HAM RADIO IN SPACE: ISS ALABAMA EXHIBIT FEATURES HAM RADIO
Ham radio will play a part as the City of Mobile, Alabama is hosts a four month exhibit of the International Space Station. This at the new Science Exploreum building.

The exhibit consists of a full scale mockup of the main parts of the ISS along with other aspects of living and working in space. According to N4UXY the Mobile Amateur Radio Club " W4IAX " will host a ham radio station that will attempt to talk to the real space station durinvg the exposition. The club also plans to demonstrate other aspects of the Amateur radio to an expected 80,000 visitors.

The show began on January 9th and ends on April 5th. More information is on the web at www.exploreum.net (N4UXY)
**

CONTESTS: 2003 WINTER 6 METERS CONTEST

The 2003 winter 6 meter contest is will commence at 2300 U-T-C on Friday February 7th and conclude at 03:00 U-T-C on Saturday February 8th. The rules are very simple. Each in-country QSO is worth one point. Out of country contacts score as two points. Hawaii and Alaska count as separate nations in this one.

Scoreing is total Q-S-O points multiuplied by the number of grid squares worked. Entries go by e-mail to w4wrl@aol.com before March 15th. They can also be sent snail-mail to Wayne Lewis, 3338 South Cashur Drive, Florence, South Carolina, 29501. (VHF Reflector)

**

DX

In D-X, PA3GIO will be active as ZK2GI from Niue from about the 18th to 26th of January. He will operate SSB only with 100 watts and a dipole antenna. If you work him, Q-S-L as directed on the air.

Also, KM1E is active from the Bahamas as C6AGN. He’s on 160 through 6 meters from now through the 4th of March.

And lastly, some good news about famed D-X’er Ron Wright ZL1AMO who suffered collapsed lungs in late November. According to Judy Rausch, AA7UC, of the International D-X Network, Wright returned to his home on January 13th to complete his recocery. (AA7UC, INDEXA)

**

THAT FINAL ITEM: CELEBRATING A NEW LICENSE CLASS

And finally, a big success for a big operating event celebrating a new license. That’s the word out of the United Kingdom as reports on the first ever Foundation Class Q-S-O party begin to filter in. Again to England and GB2RS news presenter Jeramy Boot, G4NJH:.

--
The M3 'QSO Party' on 40 metres on the 1st of January was a huge success with hundreds of newly-licensed M3 amateurs and their friends wanting to take part. Richard Jolliffe, G3ZGC, said: "I planned just to join in but when I switched on there were two M3s looking for a net controller. So as one of the Newbury club's Foundation Licence instructors I volunteered.

The pile-up was certainly the largest I have ever heard and I had to go to letters in the suffix and ask for M3 Alfa stations and work through the alphabet. In two hours I worked 112. At least half as many again were 'gotaways'."

Richard added, "What was very noticeable was that the standard of operating was fantastic by the M3s. It was noticeable how appreciative most of them were at having passed their exams. Many messages of thanks were passed to their local clubs. An excellent event."

Douglas Nixon, M3BKC, was one of the numerous Foundation Licensees joining in the fun. He said, "Richard did a splendid job as net controller during the hectic conditions that followed at times during the next two hours. Roger, G4RUW, also from Newbury, took over at 1200, followed by John, G4TSN, from Nottingham. Many thanks to all concerned."

Jeramy Boot, G4NJH
--

Obviously, the concepts behind the U-K Foundation Class license are rock solid and it is most likely the way other nations will go as they seek too increase participation in the hobby. (GB2RS)

**

NEWSCAST CLOSE

649. Cronkite Leaves Baxter For ARRL

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-18 19:10:24 UTC
From: franktheham@juno.com
Message-ID: <715f8c2a.0301181110.4b022b5f@posting.google.com>
Source record: 59732
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I found this on the ARRL website. Guess it answers the earlier posts about K1MAN and Walter Cronkite. Looks like the most trusted man in America really trusts the ARRL not K1MAN.

ARRL Announces Amateur Radio Today CD-ROM Presentation

NEWINGTON, CT, Jan 17, 2003--The ARRL is offering a new video presentation, Amateur Radio Today, that tells Amateur Radio's public service story to nonhams. The video presentation, directed by Dave Bell, W6AQ, and narrated by former CBS news anchorman Walter Cronkite, KB2GSD, runs approximately six minutes.

"We wanted to have something for people to take to nonhams and civic clubs," said ARRL President Jim Haynie, W5JBP. Haynie also anticipates that the CD-ROM production will come in handy during his visits to Capitol Hill. The presentation focuses on Amateur Radio's role in emergency communications.

"Dozens of radio amateurs helped the police and fire departments and other emergency services maintain communications in New York, Pennsylvania and Washington, DC," narrator Cronkite intones in reference to ham radio's response on September 11, 2001. "Their country asked, and they responded without reservation." Amateur Radio Today also highlights ham radio's part in helping various agencies respond to wildfires in the Western US during 2002 and mentions ham radio in space.

Haynie said he and Bell discussed the project, and Bell agreed to take it on. Alan Kaul, W6RCL, authored the script, and Keith Glispie, WA6TFD, edited the production at Suite Sixteen, a production facility in Burbank, California, that he co-owns. Haynie said Bell, Kaul and Glispie donated a lot of their own time and effort in making the the video presentation a reality.

"Someone once said, and it's probably true, that Amateur Radio is the only fail-safe communications system in the world," Cronkite says in his final remarks, noting that he has ham gear aboard his sailboat. "It really is the best back-up communications system in the world," he concludes, adding, "and that's the way it is." That phrase was the one Cronkite always used to close out his nightly newscasts during his tenure with CBS.

The League has made the presentation available for downloading via the ARRL Web site. The 70-MB file is in MPEG video format, which can be played by Windows Media Player, Apple Quicktime or RealPlayer. To view

the video directly from the Web you'll need to be able to receive data at 1.5 Mbit/s. If your connection speed is slower than that, you should download the file to your local hard drive and play it from there.

Individuals may order a copy of the CD-ROM from the ARRL on-line catalog. Plans are under way to also make Amateur Radio Today available in VHS videotape format.

Haynie says Amateur Radio Today will be the first in a planned series of at least three presentations. The second will point up the "fun" aspects of Amateur Radio. The third--but not necessarily the last--will offer a tour of ARRL Headquarters and its activities on behalf of ham radio.

Bell, a Hollywood TV producer, is a past chairman of the ARRL Public Relations Committee.

650. Re: FCC tells Cbplusser he has to upgrade

Newsgroup: rec.radio.amateur.policy

>>
>>Good point!!!
>
>That's incorrect. I almost always separate amateur vs Ham. Any time I used
>the
>word "Ham" improperly, it must have been a slip.

No, Vipul, YOU are incorrect. "Almost always" is again another
near-absolute. Most of your posts DO use the term "Ham" in the context of your
posts.

>>If the term "Ham" is derogatory then we MUST start using the the new
>>term Amateurfest.
>
>Except, its not an Amateurfest. Its organized by Hams for Hams, and Hams
>attend. Therefore its a Hamfest.

But is it attended ONLY by "Hams" in YOUR application of the term, Vipul?
YOU suggest that a "Ham", as opposed to an Amateur Radio operator, is somehow a
less-than-adequate or embarrassing representitive of the Amateur Radio Service.

>I didn't say Ham is derogatory.

Granted...No, you have not SPECIFICALLY said "Ham is derogatory" You have
only made countelss suggestions that "Ham" Radio and "Amateur" radio are not
necessarilly the same thing, and that "Hams" are less qualified to be
"Amateurs".

>Hams are often very skilled in antennas, contesting, and Morse code.

Many are into all of those. Some into NONE of those. Many NCT's I know
do not know a single letter of Morse Code and call themselves "Hams".

>Hams are often into the Ham traditions and culture.

Duh...Ya think?

>It is possible other radio amateurs have the license, do not call themselves
>"Ham", and are interested into the other aspects, and not into the Ham

>culture.

Define "Ham Culture", Vipul. Be detailed. I cannot find any reference to that term in 73, QST, CQ, the Encyclopedia Brittanica or on Google.

It's one of the few things Vipul has owned up to. But you guys should see
the rather vile anti-Ham Radio things Vipul has been saying on rec.radio.CB.

Strange, as just a few days ago Vipul clearly stated that he "defended and
supported" Amateur Radio outside of Amateur Radio related circles.

Me thinks he speaks with forked tongue.

Steve, K4YZ

653. This Is How KB1HMW "Supports" Amateur Radio

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-18 22:00:10 UTC
From: k4yz@aol.com
Message-ID: <20030118170010.05670.00000047@mb-df.aol.com>
Source record: 59736

I cut-and-pasted the following from rec.radio.cb. The only "editing" I did was to snip out about 15 lines of carriage returns.

This guy has a lot of intestinal fortitude to state he "supports" Amateur (or Ham, what ever you care to call it, Vipul) radio, then to make such obviously inflammatory remarks to a CB related NG.

Nice going, Vipul.

Message-id: <20030108223422.22983.00000505@mb-mf.aol.com>

>Subject: Re: Are there aliens among us?

Yes-they're called Hams.

There are Hams among us!

It could be your neighbor, the butcher, the baker, the candlestick maker, … anybody. Secretly, they may be Hams. Some of them wear an "identifier" which consists of numbers and letters. They identify themselves and fellow Hams through this identifier. Also, their mannerisms and colloquialisms are recognizable for those who know about them. Still, they travel unrecognized.

On the outside they look like humans. Like a body snatcher, their goal is to convert each and every one of us. They communicate with each other with electronic devices over the airwaves. Those who have gotten this far have seen certain traditions and protocol utilized. They form secret societies. Some, which know of the existence of Hams, have called it a cult.

They use codewords in their conversation, replacing regular works with Qxx. Some have developed the ability to send and receive real time encoded symbols. One gains higher status in the Ham society for demonstrating this ability. Some of them feel superior because of this.

They live.

From: "Cult Guy" OhNO!@Anon.com
Now we have it! Here, for the first time it is out in the open. The ARRL is a cult! They speak in codes. Tongues. Have secret societies with arcane initiation rituals.
Odd groups such as the QCWA, ARES, and an odd-duck bunch calling themselves the 10-10 Club abound and all are rather reclusive and exclusive.
Yes, indeed. This strange bunch of other world types are often seen with

funny little metal sticks protruding from the roofs of their cars, from the tops of their funny little aluminum hard hats, and some even keep funny looking protuberances on their belts to, one assumes, keep their dungarees from falling down from their chests.
Where do these strange critters come from? What do they do? Do they bear their children live? Incubate them? Why do they glow in the dark? How do they reproduce?
They must.
They live.

> And on what basis do you assert the test is "easy"..? That it MAY have
>been easy for YOU...?

They have "license in a day: classes. It is expected that those that attend will take the test the same day and pass. At least 75% do, the rest pass it on their 2nd try. So, the test is easy.

You would have to admit, one does not have to learn the material to pass the test. But, one has to learn Morse code to do code. Some do just that. Therefore they are an only-coder.

>>Hams are often very skilled in antennas, contesting, and Morse code.
>
> Many are into all of those. Some into NONE of those.

The Hams that are good with antennas often are quite good. Antennas is not an easy topic. So, many Hams are very intelligent, in this topic.

> Define "Ham Culture", Vipul. Be detailed. I cannot find any reference to
>that term in 73, QST, CQ, the Encyclopedia Brittanica or on Google.

Dictionaries do not define cultures. Even encyclopedias do not do this.
Yes, its there. When one of these publications QST, ARRL handbook, etc say "Hams like to...",this is an example of "Ham" culture.

So let me get this straight, Phil:

1) The ITU Convention and International Radio Regulations are, indeed, separate
and distinct TREATIES that are independent of other agreements, like the UN
Charter.

2) As treaties, they are ratified by the Senate, as required by the
Constitution.

3) Amateur Radio is part of those treaties.

Its humor, please.

Some time around last October, I invited a non-Ham to a Hamfest. Also, I gave a copy of my ARRL handbook to someone. I mentioned I was a Ham on a few occasions.

Also, I attempted to form an amateur radio club. Only two attended. So, not too successful. Couldn't get the club started as not enough members and other priorities took over.

Lets not get personal.

Bought a Micro$oft cordless mouse for my shack computer. Has a really ugly sounding output at 27.045MHz (or 27.145MHz selectable).

But the receiver is pretty good -- I can run full 1.5KW limit at 28.001MHz and it isn't affected, even though the amp is 17 inches from the mouse receiver.

Sounds like more of a tribute to your amp's shielding than to the mouse
receiver.

Was the EA6 Excel DXCC tracking program what you were looking for?

If the test were "easy", Vipul, folks would pass it 100%. And I passed
all of my exams except the Extra on the first pass, but NONE of them were what
I considered easy.

By the way, I did it "the hard way" and actually learned the material.

>You would have to admit, one does not have to learn the material to pass the

No, Vipul...As long as there is a written test required to be a licensed
Amateur, one cannot be an "only-coder". It still requires a practical Code
test AND the written.

You are wrong.

This kinda stuff always makes me laugh.
What the heck do you think Ham Radio is?
Some kind of a Holy Cow akin to a religion of some type?
Do lightning bolts come down from heaven when the
great "Goddess of Ham Radio" is insulted?
I have always said that if Lyndon Larouche or the Unification
Church ever needed extra screwballs for recruitment
uses in airports and kiosks in mass transit causeways, all
they need do is goto any hamfest and look around.
Stop taking ham radio so damm seriously! It's nothing but
a goddamed insignificant hobby as far as the rest of
th world is concerned - OyVey go get yerself a nice bagel
w/cream cheese and chill out!

"Psychology is the study of everyone else's bullshit."

- Taylor

"History does not record anywhere at any time a religion
that has any rational basis. Religion is a crutch for people
not strong enough to stand up to the unknown without help.
But, like dandruff, most people do have a religion and
spend time and money on it and seem to derive
considerable pleasure from fiddling with it."

- Lazarus Long, "Time Enough For Love" by Robert Heinlein

Well, last night I was looking for the Liberty
Net. Could not find them anyplace. The band
was packed solid from 3.940 thru 3.970
so I guess I's just forget about them and listen
to k5blb and his group on 3.947.9 - when
out of the blue a MIRACLE occurred.....

I hear someone with an s-5 signal ranting in
the background...he's going on and on and
on in a tirade....quoting bible verses...making
non-sensible rhymes.....talking to himself...and
others.....like a demented Energizer Bunny
on Crack or Speed.....

No.....!!!!.....Yes.....???.....CAN IT REALLY
BE???.....YES!!....OH SWEET JEEZUS STRAPPED
DOWN ON A ROCKET POWERED SLED AT THE
BONNEVILLE SALTFLATS.....IT...IS...REALLY..
.....HIM.....WOOOOO...HOOOOOO!!!!!!!!!!!!

I nearly fell out of the chair. I had to pinch myself to
be sure I was awake. Was it live or was it Memorex?
No.....IT'S REALLY HIM.....Hams of 75 meters
and beyond.....get ready once again people...for HAM
RADIO FUN in it's ultra-purest virgin Bertolli olive-oil
form.....because...(hope your sitting down reading this folks)...

N X 0 T HAS RETURNED TO THE AIRWAVES !!!!!!!!

Yes...I mean that NX0T people - the one and only!

Jone was one of the few would drive David - WA9KJI absolutely
INSANE and turn whatever frequency they bumped heads
upon - into one big gigantic sandbox filled with 5 year-olds
on a chocolate and sugartit high that made even the best days
of the infamous "Mike and Judy Show" pale by comparason.

Please, PLEASE will somebody please tell KJI that his old pal "NX" is
back on 75 meters and was tearin up BLB's crew a new
bunghole on 47.9 last night. Rest assured we ain't heard the last
of our pal John folks! (I'm so happy over this development folks that
I could just shit in my BVD's)

WELCOME BACK JOHN!! We missed ya boy!
Please get back in there and up on 14.275 to "straighten
things out" (KJI bounces back in-between 275 and 313

please be sure to say "hello" to him sometime)

Thats what a cult belonger would say.

To some its a hobby, not a cult. To others, its a cult.

>But not how to achieve it. You complain about the written tests, but do not
>produce any practical ways that they could be improved.

Keep the test as it is.

Change the nature of the clubs. Less code, politics, Wuoff Hong, etc. More
kitbuilding, homebrewing,antenna setups, and social events.

I "belonged" to another cult before, a good cult. Now, the cult no longer
exists.

Morse code is fun. Real-time decoding can be addicting.

> Are you kidding I dont want to socialize with these people.

The hobby has the perception of social misfits. Attending a Hamfest does little to change one's perception.

Things like waiting three hours to hear a secret chant about code from the Wuoff Hong.

The majority of its particitants are male, old, fat. This is true of the last two Hamfest s I went to. Most of them use radio for a diversion (hence the appeal of the cult) and are not EEs. The only social event Hams seems to have are eating events (Sunday brunch, cookouts, etc) and Hamfests (which usually has a buffet).

Hey, maybe they could even do something with cameras as well as microphones! Oh wait, they already have.

Seems like a answer in search of a problem. Seems like you could do much better by keeping the signal on the net 100 percent of the time. The whole thing sounds like a chat room for licensed amateurs.

This is hardly any technology breakthrough, it sounds like something that someone who wanted to "cash" in on the internet dreamed up.

It ranks right up there with the PSK31 voice mode.

Would we send QSL cards?

Other than that I think it's great.

I went a little overboard at times, even today. I know that Hams are basically good people. I will try to be more sensitive.

Sadly, amateur radio lead to my demise. I could not see the light at the end of the tunnel. It was the longer pathway. I was too impatient and chose the shorter pathway. Then, the train ran me over.

I had a chance to sell out (to "CB"). I did not take it. As a result, I did not get my amateur radio or CB.

It looks like the path I chose will lead me to leave amateur radio. I will ponder and reflect. I may still keep my radio as a diversion.

The terms tunnel, train, ran, CB are metaphors. (Its something totally different than CB, but using CB illustrates "selling out").

Vshah:

You've just described a high percentage of football fans, NASCAR fans, hot rod fans, bass fishermen, hunters, and a lot of other old, fat men who enjoy a wide variety of sports and hobby activities.

>This is true of the last
>two Hamfest s I went to.

It was also true of the last football game I attended.

> Most of them use radio for a diversion (hence the
>appeal of the cult) and are not EEs.

I see. Are you saying that having an EE degree should now be a requirement for an amateur radio license?

>The only social event Hams seems to have
>are eating events (Sunday brunch, cookouts, etc) and Hamfests (which usually
>has a buffet).

Hmmm...something's wrong here, then. The last few ham events I attended had little or nothing to do with food, and a lot to do with hard work (setting up antennas, stations, generators, etc.) and then a lot of operating. Yes, they fed us, but only at normal mealtimes and there was no competitive (event-style) eating involved. Everyone ate normal, healthy portions and was grateful for what they received.

No, I think he's waiting for the great freebie HF giveaway
that keeps being rumored about coming soon. I said
to heck with that and just knuckled down and did it. Now
that I passed the 5wpm I could care less if the code requirement
EVER changes! (really I kinda hope it don't change but Sssshhhh
that's a secret) ;^) I just thought of something, I'm a member of
NCI. I think I'm going to go quit my membership in that group.

I run about 50 or so WPM, I've got three fingers on my right
hand that are nerve dead (no feeling at all) which makes touch
typing kinda hard for me. I don't like those canned function keys
either they seem to be out of place in the conversation when people
use them. I just write it out instead of trying to figure out which Fkey
says what!

>
> 73 de Larry, K3LT

You can email me with a sked just make it after 14:00 UTC, I
need my beauty sleep ;^) The email address I use here is real
kb9tmp@juno.com they don't filter out any of the spam
so I just use it for posting in here.

711. Lets face it ... we're just communicators.....

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-20 10:10:29 UTC
From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <b0h28i5oa3@enews4.newsguy.com>
Source record: 59799

True to a point.... most often on most scenes the ham op's are only needed in a communications capacity, usually set up somewhere in vicinity of a scene, or at a E.C.C. About the only "hands on" act I can see that hams can serve extremely well is the "search" part of search and rescue. I have seen this done, where a ham is is assigned to a firefighter or officer working on a "search line." The ham is not there to be the "rescuer" nor being the person offering medical care when finding the lost party, but does help to expand the area being search and covering more ground quicker. This has worked real well in the past. Seems like the county I live in "busses in" senior citizens here, as there are more "old folks homes" than there are apartment buildings in a community of around 40-45,000. They seem to like to wander away from the homes on a regular basis.....

All in all... all we are is communicators.... regardless of band or mode. Let's not kid ourselves.

>You're kidding, right? You think you're having a serious discussion
>where content matters? Not around here

Perhaps "not around here" to you, but in most matters, yes, I am serious about what I say.

>Not paying attention is a virtue, sometimes. This is one of those
>times.

If you like getting caught with your britches down, I guess you'd be right. But in retrospect, I guess you DO like getting caught with them down or you wouldn't be trying to catch up all the time.

>I was just being polite. Like Hans' "best wishes."

I generally try to not say something I don't mean. Hans' "best wishes" comments are, in my opinion, usually sarcastic in nature. I ignore it. If you can't be sincere about it, why say it? One cannot offer "best wishes", "73", "have a nice day", etc etc after trying to slam someone in a RRAP post.

> Thats what a cult belonger would say.

It's not a cult. You defined "a unified belief system" as one of the
necessary conditions for a cult. Ham radio does not have a unified
belief system. Therefore, it is not a cult. QED.
>
> To some its a hobby, not a cult. To others, its a cult.

You are the only person I have ever known to use the term "cult" to
describe the ARS. Here's a clue: "Cult" does not have positive
connotations to most English-speaking people. The word implies
mindless acceptance of illogical beliefs.
>
> >But not how to achieve it. You complain about the written tests, but do not

There are currently four tests - three written and one code.
>
> Change the nature of the clubs.

How? Clubs usually reflect the interest of the members.

Are you willing to do the work necessary to effect changes?

> Less code, politics, Wuoff Hong, etc.

"Less code" - what does this mean? Stop having code training classes?
Ban CW from Field Day and other club events?

All that's left of code TESTING is single 5 wpm code test that will
probably be gone in less than a year. So when you say "less code" it
must mean you want to suppress things like code training classes and
hams actually using the mode.

What is wrong with live and let live?

"politics" - all depends what you mean by "politics".

"Wuoff Hong" (actually spelled, "Wouff Hong"). Never seen one of those
at a club meeting in 30+ years. Do you even know what it stands for?

> More
> kitbuilding, homebrewing, antenna setups, and social events.

>>cults?. Be careful, be VERY careful!
>>
From: n2ey@aol.com (N2EY)
>"Do not tangle with dragons, for you are crunchy and taste good with ketchup"

I am not worried about the Ham influence. I go to the Hamfests for the seminars
and the flea market. The Ham culture there makes it more interesting.

Did it! I no longer am a member of NCI. Here is a copy of the email I sent
out.

I have been a Member of NCI 1999 and have changed my mind on the code test
question. I believe there is a good reason for keeping at least a 5WPM code
requirement for access to the HF bands. So I am resigning my membership in
No Code International. Please remove me from your member database.
Thank You.

>I believe there is a good reason for keeping at least a 5WPM code
>requirement for access to the HF bands.

HF does not need code to transmit. What is the "good reason" to keep the code requirement?

My feeling exactly. I've been wondering the same thing about cell phones, in fact. What is the point of using a wireless phone to access the wired telephone network when it would be so much easier to do the same thing with a phone directly wired to the network? I mean, if there are wires in the middle why would anyone want to use radio at the edges?

> This is hardly any technology breakthrough, it sounds like something

Absolutely! And we've had wired telephones for 75 years or more, so why anyone would think that wireless phones were a technology advance is beyond me.

> that someone who wanted to "cash" in on the internet dreamed up.

You mean they're generating cash by using the Internet to link amateur repeaters? Damn, I wish I'd thought of that.

And KB9TMP will note that I promptly replied to his message, indicating that
his request would be promptly handled.

That's the difference between NCI and some of the fanatical procoders who
frequent this newsgroup ... unlike the fanatical procoders, NCI believes in,
and supports, freedom of choice, rather than forcing views on others.

73,

VoIP is a different animal altogether from cellular phones.(at least in
this context - there is nothing to prevent cellular VoIP. The whole
point with cellular is to have a telephone connection that allows you to
be portable.

> I mean, if there are wires in
> the middle why would anyone want to use radio at the edges?

If that interests you, then go for it! I find it uninteresting though.
It equivalent function is an autopatch, and doesn't even seem like radio.

>> This is hardly any technology breakthrough, it sounds like something
>
> Absolutely! And we've had wired telephones for 75 years or more, so why

Huh? I'm talking about Ham Radio, and I think you are talking about
telephones. If what you are talking about is telephone comms through the
internet, that's just fine with me. I just kind of like the radio aspect
of radio myself. You know, putting up antennas, trying to work DX when
the propagation is good bad or indifferent, working contests, that sort
of thing.

I wonder if FRS radios can be patched into VoIP? Sounds like a good way
for the unlicensed to work DX. Heck, who needs to be a ham anymore?

> mostly "male, old, fat"?

Hans,

Just got back Friday from a week in Ft. Lauderdale, FL for the IEEE 802
wireless WG interim meetings ... a few observations ... and they are
consistent
with my recollections of a number of years of these meetings, which are
held every 2 months and typically have attendance > 1k people ...

Yes, the majority of attendees were male, but there were quite a few
females.
(some of whom were actually rather attractive ... but that's just an
objective
observation that any observant person would have difficulty avoiding, as I'm
a
happily married man ...)

Old ... a few, but the majority appeared to range from their late 20's to
early 50's,
with the bulk of that being in their 30's or 40's.
Darned few older than mid 50's, but those that are are still VERY sharp and
up-to-date on the latest technology ... and quite well respected by their
younger
colleagues.

Fat ... a few, but in the minority ... probably because the population is dominated
by well-educated "baby boomers" and "generation-x'ers" who have the sense to be (at least reasonably) fit and health-conscious.

And yes, at 52, I am on the older tail of the distribution ...

73,
Carl - wk3c

It's quite a handy answer it is, too. When I'm up on my lake in northern Minnesota, I can get on the local repeater with my HT, enter the code for my "home" repeater in Minneapolis, and describe my catch to my friends at home as those poor bastards drive back and forth to work.

As you say, the technology is just a clever mix of IP and ham radio -- nothing "breakthrough", but certainly useful. I can imagine a lot of scenarios in public service communications where this would be particularly suited.

With all kind wishes,

yep, the irlp system is already being used around here to link skywarn
operators at nws offices that otherwise can't talk directly to spotters in
areas where repeater coverage isn't good enough.

Well for one CW is a neat mode, I wish I was better at it. Another thing
when you hear a beacon on 10 meter or somewhere else it's nice to be
able to understand what it's trying to tell you.

I've learned over the years that stuff that I hated and didn't see a use for
at first turned out to be things I really like, for example spinach, olives,
burr haircuts and dogs! And maybe even Morse Code :^)

>
> >I believe there is a good reason for keeping at least a 5WPM code

When half of the HF band width is for code or digital mode only that's
large chunk of "good reason"! I hated the fact that I had to learn
Morse Code to get on HF, but now that I don't have to have a single
thing to do with the mode I keep finding myself down on the lower
half of each band listening. In other words I'm beginning to "warm up"
to the mode!!!

Why is it "necessary to work DX?" With a ham license (an
amateur radio license grant, that is...). I did that a half
century ago on a 24/7 basis as part of ACAN, without any
license whatsoever.

Why is it "necessary" to demonstrate OOK CW skills in order
to "work DX on HF?" Do you have any sane, rational reason
other than the obviously-political need for that in a HOBBY?

Gosh, old-timer, that must have been done before 1957, yes?

I remember the 1994 Northridge Earthquake very well and
saw NO evidence of this great "service to the country" at the
eastern half of The Valley. Same thing in the Sylmar Quake
of 1971. Or the Whittier Narrows quake in between those
two. Or the big Wildfires we've had around these parts.

I've seen/heard much of those individuals involved directly
with all those emergencies/disasters...not a word on "hams."

How can that be?

Carl, permit an interruption of an interruption here, but a few things
need correction.

Firstly, N2EY is trolling with the remark about the IEEE. Second,
IEEE is a PROFESSIONAL MEMBERSHIP ORGANIZATION, not
a hobby/recreational activity organization. The only comparison
possible (by sane, rational individuals) is that they are organizations,
have dues, publish books and periodicals...in the most general of
those terms. IEEE goes way beyond the scope of anything ARRL
does or has done, ever Period.

I don't attend the IEEE "big" functions, just the local group meetings
of interest (published monthly in the IEEE Los Angeles Chapter
newsletter, well in advance, usually...). None of the attendees seem
to be involved in electronics, radio, or electric power as a hobby or
even in guise of some mythical "service to their country" ("amateur
radio is a SERVICE not a hobby!"). It is their WORK, an
intellectual pursuit, a creative one, mentally stimulating and
challenging, that is continually advancing the state of all electric
and electronic arts.

The "traditionalist" hams in here (Miccolis, Heil, Roll, even Brakob
and Warren) continually dwell on the mythical "service" aspect as
if amateur radio was some profound, noble, self-sacrificing service
to humanity and that they are all somehow "superior" to ordinary
mortals who do not possess an amateur radio license grant. As a
result we get the continuing talk-downs, insults on the persons of
those who do not buy into their fantasy or agree with their grande
self-enobled opinions. No one can possibly ever be as good as
they according to their own opinions, nor is anyone ever allowed
any opposing opinions.

What is interesting is that Miccolis jumped in here with some
barbed comment on the IEEE membership. He does not appear
on any IEEE membership search, yet he claims to be an
"engineer" at an (unnamed) company engaged in electronics and
working for hire there (definition of professional, work for pecuniary
interest).

I'm a Life Member of IEEE, meaning the total of my years of
IEEE membership plus chronological age equals or exceeds
100 years. IEEE Life members do not pay dues yet have full
voting, membership status, receive the monthly Spectrum
membership magazine plus all other newsletters requested.

Members of ARRL represent less than a quarter of all licensed
US amateur radio licensees. ARRL membership is about half

the number of IEEE members. ARRL is an organization of amateurs engaged in an avocational pursuit...IEEE is a worldwide professional organization.

Not "all" the time...only during those times when someone wants
to harass, browbeat, or talk down to someone who doesn't agree
with him about "proper service behavior." Sort of like what Warren
and Brakob do (failure to obey proper tradition and attitude is
a capital offense).

>For example, once upon a time I thought you might be somewhat
>intelligent, but after reading your jeremiads about the state of ham radio,
>I've changed my mind about your IQ. Are you related to Masataka Noda?

Interesting style of talking-down to someone...a curious mix
of Super Chief Dill Sergeant, Mr. Manager, and general icehole
sitter, all trying to spit on someone simultaneously.

Must have been a warm winter in the northern lands...

>With all kind wishes,

That salutation always lacked sincerity. On the other
hand, coming from a Mr. Manager and a Super Chief, it
sounds commonplace. :-)

[watch Sgt Putz, aka Steam Robeson, come marching in on this
interruption of an interruption of an interruption...like an eruption]

.....

Allow me an observation...it matters not what the hobby is, MOST people
have a narrow perspective of what is "normal". If you aren't into
golf, tennis or some other "socially accepted" recreactional endeaver, then
your not normal if you listen to the vast majority of such folk.

It matters not if you are an antique car buff, into model trains, model
airplanes, ham radio,
or whatever. None of these seem to fit the normal perception of a great
many
people. Frankly, such folk can stuff it anyway. I enjoy what I do and
happily
have a spouse that also enjoys most of my hobby activities.

If anyone expects any hobby to somehow be a reflection of the normal
distributions of age, gender, race or whatever, it just ain't gonna happen.
I really don't give a hoot, and I'd hope most people also don't, simply
because ham radio demographics may be tilted towards white males,
or whatever.

Enjoy whatever you do and as long as it is legal, apologize to no one
for your interests. At least you are DOING something. Another big group
of folks that consider themselves "normal" do nothing but eat and
work the channel selector of their TV remote.

Anyway, just my observations.

Cheers,
Bill K2UNK

As I suspected a lower percentage in each of the three categories
(male,old,fat) are present than are present in Ham radio.

N2EY, this answers your question.

What will occur?

You say "less code" not "no code testing". Totally different things. Sounds to me like you want code USE to die out, not just code testing.
>

>I have put in suggestions, but no interest in the club. I would volunteer if
>there were interest.

In other words, you want somebody else to do it.

If you want the things you suggest to happen, you have to do them. For example, homebrew some projects, then ask for a meeting date when your projects can be the program. You have to do this well ahead of time - don't just show up and expect them to put you on the agenda that night.

I've been to local club meetings where club members put on the follwoing demonstrations and programs:

- SWLing
- APRS
- Packet
- Skywarn
- PSK31
- Homebrew/kit QRP rigs
- History of US amateur radio licensing since WW2
- "Mike and Key night" where hams brought mikes and keys, new and old, then told the story connected with each one.

And much more. Of course, somebody had to take the lead on each one.

Who are these "fanatical procoders"?

Is there something wrong with being pro-code? (Not procodeTEST, mind you).

Carl,

Hope you don't think I was implying that IEEE folk or EEs in general fit that
description.

"Vshah101" (Vipul) has made a point of telling us repeatedly how hams are
almost all male, overweight, and "old". My question was to find out if he would
categorize other groups the same way.
>
>Yes, the majority of attendees were male, but there were quite a few
>females.

Which is to be expected in any technical pursuit, professional or amateur. I
will leave it to others to argue whether such tendencies are genetic, cultural,

or both. Fortunatley, the gender imbalances are decreasing.
>
>Old ... a few, but the majority appeared to range from their late 20's to

>Darned few older than mid 50's, but those that are are still VERY sharp and
>up-to-date on the latest technology ... and quite well respected by their
>younger colleagues.

Of course an IEEE gathering draws a different demographic than a hamfest. Most IEEE attendees are not there on their own time or their own nickel. (That's not a bad thing!). And there are few EEs under the age of about 22, while many of those older than about 60 are retired. Not all, of course.

classes,
> this will occur.

The only one doing that today is the FCC. Others that wish to keep
it that way are free to take that position. If you believe otherwise,
then support the change when it is proposed. It won't be proposed
until after the international treaty is changed.

> >Are YOU volunteering to do the work to make those things happen? For

>ARRL is an organization of
> amateurs engaged in an avocational pursuit...IEEE is a
> worldwide professional organization.

Thanks for the distinction, but was it necessary? ARRL and Hams should be more truthful about the hype. Hype such as the value of service, Hams technical capabilities, Hams with degrees, where 1% is touted as representative of the hobby. The hype only makes themselves feel better and does not convince the public. This ultimately hurts the hobby.

Also, tying code testing to higher license classes support the hype that coders have higher technical capabilities.

Also, did you read my suggestion about mini-radio certifications? I would like to see more tech people, like yourself, starting technical clubs.

How can anyone with an EE degree have a Ham license, belong to ARRL, but not to IEEE? Also, how can any self respecting EE learn code (unless they TRULY enjoy it)?

Jim ... I stand corrected ... when I said "fanatical procoders" I *MEANT*
something
like "those who are fanatical about forcing a code test on everyone" ...
that is what
I mean when I (mis)use the term "procoder" ... I actually mean
"pro-code-tester."

Brian:

Don't get me started on Red Cross 1st Aid/CPR instructors! I think they're
the biggest bunch of baloon-headed egomaniacs in the world -- and they
are almost as dangerous as Ham Hero (tm) wannabes! They keep
emphasizing that you MUST receive your CPR refresher training on an
annual basis, you MUST carry your current CPR qualification card, you
MUST do this, you MUST do that, and most importantly, you MUST
glorify and venerate your local CPR instructor as a God of Lifesaving.
After completing my own First Aid/CPR Instructor training many years ago
while stationed in Germany, I came to the conclusion that I wasn't going
to adopt the mandatory asshole posture with my students. I just taught
them how to do basic First Aid/CPR and let it go at that. If they encounter
someone choking to death, or not breathing, or WHATEVER, I don't want
them to think they have to stand by and let someone die just because it
has been more than 12 months since their last refresher class! Nobody
is going to get sued for trying to help -- that just doesn't happen!

>says what!

Good! I know people with ten good fingers who, well into their middle
age, and having been using computers since the day after they were
invented, are still hunting and pecking and totally dependent on the
Function Keys. Trying to work them in digital modes is like trying to
pull your own teeth with a pair of lineman's pliers! I'm sure that working
you will be most enjoyable!

>You can email me with a sked just make it after 14:00 UTC, I
>need my beauty sleep ;^)

How about 1700 UTC tomorrow (Tuesday, Jan 21) on 20 meters? I'm not sure what a proper frequency for Hellschreiber would be; let's start around 14.080 unless you have a better idea! If you want, we can first establish contact in RTTY and QSY to Hellschreiber. E-mail me with your preference. Looking forward to our QSO!

> Soem of us are even Red Cross 1st aid/CPR instructors.

Now here is a point I believe in no matter what..... I beleive that most every person out there should know basic first aid, as well as CPR, regardless of what they are doing, radio related or not. Instructor status is great but at least having a basic functional knowledge of those skills is a positive asset to anyone.

It isn't your freedom to bestow. You haven't given KB9TMP anything
which wasn't already his.

You have demonstrated repeatedly that you are as fanatical toward doing
away with code testing as anyone who supports continued testing. If you
suupported "freedom of choice" you'd have no problem supporting the view
of those who believe that testing should remain.

> a hobby/recreational activity organization.

Oh, THIS is GRAND!

Lennie the Licenseless giving a lecture about not comparing things...

Lennie the Licenseless is the first one to compare Amateur Radio to
"professional" radio, the Armed Forces, civil aviation communications, and
1950's era rear area radio relay stations at which he once fought a war.

>None of the attendees seem
> to be involved in electronics, radio, or electric power as a hobby or
> even in guise of some mythical "service to their country" ("amateur
> radio is a SERVICE not a hobby!").

Even when it was your "work", you didn't seem to be involved it it,
either, Lennie. So say third parties, anyway.

>The "traditionalist" hams in here (Miccolis, Heil, Roll, even Brakob
> and Warren) continually dwell on the mythical "service" aspect as
> if amateur radio was some profound, noble, self-sacrificing service
> to humanity and that they are all somehow "superior" to ordinary
> mortals who do not possess an amateur radio license grant

You'll have one heckuvatime coming up with quotes on that, Lennie.

Shall we add those to the "Waiting on Lennie to Provide Evidence" pile?

>I'm a Life Member of IEEE, meaning the total of my years of
> IEEE membership plus chronological age equals or exceeds
> 100 years.

I know this has some relevence to Amateur Radio. Lennie would NEVER delve
into a non-topic related discussion on his non-Amateur Radio related
experiences as a means to somehow perpetuating his own glory...

>Len Anderson
> retired (from regular hours) electronic engineer person

> Life Member IEEE
> Work Unit Processor for SETI@home

And not a bit of it related to Amatuer Radio...Again...

Putz.

>to see more tech people, like yourself, starting technical clubs.

It would be nice to see folks with the alleged experience of Lennie making that experience and knowledge available to the young and curious, but in this case, it won't happen, Vipul.

Lennie is a very mean-spirited, selfish and self-serving person. He is quick to spout off technical blurbs when it serves his rantings, but when asked to REALLY help, it's never forthcoming.

Lennie has had a lifetime of opportunities to share his supposed experience and skills with youth and adult alike, but he never has...Not at least unless money was involved.

You'll be waiting a long time if you are waiting for Len Anderson to do anything that doesn't serve him first.

I found it in the help files for MixW. Plus a few websites I've run
on to have the same history for it. I did a Google search and now
Google only brings up sites for selling me Hellschriber software and
RigBlaster web pages. So much for Google being the greatest of
all the web search sites. :(

And just for the record I'm 20+ years as a GM service tech. Plus
my 46 years of age, gives me at least 66 years which doesn't mean
anything because you don't add your age to your years of service
to get anything meaningful. Your 100 years and $2.50 will get you
a cup of coffee at Starbucks. MAYBE!!

I would have left this post alone but you included my name in
a part that I snipped so I feel like you invited me to join in.

Simple: They see more of a need for ARRL membership than for IEEE
membership.

> Also, how can any self respecting EE learn code (unless they TRULY enjoy
> it)?

Simple: Because it's there.

What does one have to do with the other? Morse code is widely used on
the ham bands, as anyone with a suitable receiver can easily
determine. An EE who wants in on the fun will learn Morse.

And for the record: I have BSEE (1976, University of Pennsylvania) and
MSEE (1992, Drexel University). Also been a ham since 1967 and Extra
since 1970. ARRL member since 1968. Employed as an EE since graduation
in '76. Not a member of IEEE, as I see no benefit to such membership
in my job. IEEE is very active in some areas of electrical engineering
but not in others.

Have a healthy amount of self-respect, too.

If you add up my age, years as a licensed ham, years as an ARRL
member, and years as a degreed EE, the total comes out in excess of
150.

Bill,

WELL SAID!!!

Almost any activity outside of that narrow band of "normal" is
criticized as "misfit" or "oddball" by some. As in "what kind of nut
gets up at 5 AM to go run 3 miles in 10 degree weather before the sun
has even come up?". Etc.

Oh well! You know you can't have everything in life,
where would you put it all?

BTW I had a real nice QSO today with Larry K3LT on
20 meters this afternoon. We did 3 modes 2 of which I had
never tried before. The PSK31 worked good but we also
tried out RTTY (new to me) and Hellschriber (new to both
of us) and you can ask Larry the last one is a rather nice
mode to work.

Ya want to know something else? Larry's a pretty nice guy
for being the rabid PCTA that everyone thinks he is! ;^)

Thanks for the QSO Larry!!

> What the HECK is that supposed to mean?

He is paraphrasing Star Wars in it's "giving in to the Dark Side"
It sounds like ARS is the "Force" and CB is the "Dark Side".
Kinda funny Vipul talking like that and then badmouthing the
ARS for it's "Code Words" and such. If that ain't a type of
code word nothing is!

>
> >Then, the train ran me over.

I'll bet that hurt! My daughter got hit by a train once.
She spent a week in the hospital but came out ok.
(Just a little extra metel in her head now, that she
didn't have before) But that might explain Vipul's logic.

Its completely unnecessary for anyone to work DX. That is just a thing that some people do. My point is that if a FRS radio can legally work VoIP, that the "great unwashed" would be able to do exactly the same things that the rooting tootingest CW lovingest Extra could do without any license whatsoever.

I don't know exactly where the law starts and stops on this, but if you can do VoIP, then you should be able to do PSK, etc over IP also.

> Why is it "necessary" to demonstrate OOK CW skills in order
> to "work DX on HF?" Do you have any sane, rational reason
> other than the obviously-political need for that in a HOBBY?

Its only necessary because it's a qualification at the moment. Otherwise I Don't care a whole lot about it. After it isn't a qualification, it won't be necessary any more.

Whew! I suspected it was a typo, Carl. No problem! After all, despite
the name, NCI's official position has always been anti-TEST, not
anti-CODE.

Interesting to note that while you are quick to make the correction,
Vipul (Vshah101) has made no such announcement.
```

Anyway, I shall reword my question:

So who are these "fanatical procodetest folks"?

--

And while we're on the subject of 802.11b....

Two opinion questions for one and all:

1) Do you think the rules against on-air encryption by amateurs should be relaxed or eliminated?

2) Do you think the "commercial content" rules in Part 97 should be relaxed or eliminated?

I maintain that the biggest hurdle to getting onto the HF bands is the COST. Code? That was no problem for me. It's those other things, like getting an HF rig, an antenna, a tuner, power supply, lightning arrestors, decent coax, mast, and a keyer- that make it difficult to get onto HF. Not if you're wealthy, or have a lot of extra ka-ching laying around... but I don't quite fit into that category.

Lucky for me, this coming weekend, a very nice local elmer is going to lend me some of his spare radio equipment to try out for a bit... the antenna-raisin' party is this Saturday in my backyard! Bring your Bertha torches folks; it's mighty cold 'round here and the ground, she's frozen solid (but there is STILL no snow! What a gyp for us cross-country skiing lovers)... I think I'll just strap the 5-band vertical to the deck, throw some big sheets of spare chicken-wire under the deck to use as a makeshift counterpoise, and make do until spring. What the heck? If I can work some DX with that set-up, I'll think of myself as a REAL amateur radio operator!

No, because then people would be trying to find a way to sell their unsolicited crap on the air, too- like spam is to Usenet. Just another avenue for hucksters to try and push their inferior, otherwise-unsaleable junk off on the public.

Welcome to ham radio. Best of luck to you in getting on HF. Just read over your info up on QRZ and sounds like you are the kind of operator we need. Keep up the interest.

Ham radio is a great hobby/service. Just remember that USENET is not ham radio.

It certainly isn't necessary with tropical fish or stamp collecting.
Right now, the regs require it for HF amateur radio. Anything which
proves to be a stumbling block for you is "obviously-political".

800. Inside the Baxter Story, in his own words ...

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-22 02:30:19 UTC
From: Trebb@WebTV.Net
Message-ID: <61c26b4c.0301211830.105d4c0c@posting.google.com>
Source record: 59932

Covering the latter-day, ham history of Glenn Baxter a/k/a K1MAN a/k/a IARN a/k/a AARU et al, the following exchange of emails is the definitive word on Baxter, his operations and his mental state.

Answering W4ASX editorials, today Baxter fired back. In the attachment which follows, we learn that he equates himself to Bill Gates and Ted Turner, that people in Dayton ask for his autograph, that AARU is a registered trademark and that www.K1MAN.com had 64,582 hits during the month of December. But more to the point: "My wife Bonnie says I am a narcissist."

Bonnie is on the money. DSM, the internationally accepted manual of mental disorders, defines narcissism as "An all-pervasive pattern of grandiosity (in fantasy or behavior), need for admiration or adulation and lack of empathy, usually beginning by early adulthood and present in variety of contexts."

We all have characteristics that track DSM, but the difference between an order and disorder is dysfunction. If the characteristics give rise to a "presenting problem," then the person is said to have a disorder.

Quite simply, the issue comes down to whether Glenn's narcissism is all pervasive, invading, penetrating, and molding every aspect, nook, and cranny of the personality, which is, granted, a subjective judgment.

The moment I witnessed the forays into foreign policy in Bougainville, I thought that line had been crossed. And now listening to Sam and Glenn talk about operations in Iraq, Jordan, Israel and Somalia, I know they've entered forbidden territory.

Their activity violates the Logan Act, which prevents private citizens from conducting foreign policy. Glenn's response: "And we have done some wild things around the world over the years. But in violation of the Logan Act? Come on Bob, who is deluded now?" In fact, Glenn embraces some of the same people we, worried about homeland security, oppose. Shouldn't a responsible leader be open, in the very least, to the possibility of adverse consequences?

As Brian, K3VR, who has compiled an amazing dossier on Baxter operations in the arena of foreign policy, writes: "Whether he is ill, naive, stupid, or a bona-fide spy, won't matter one iota to the agencies who have questions about his actions. They will want

satisfactory answers to significant questions." Our security demands no less.

As to his respected Wife's assessment of narcissistic mental state, Baxter drops one more hint in the attachment. "Anyway, I sent Bob the $25 and he said he never got it. It did not come back so, being paranoid, I figured Bob was stiffing me." Unbelievable, this after the closest working relationship where I had proved my honesty time and again. Characteristic of Baxter, he does not disclose in the attachment whether the $25 check ever came back, leaving, for the readers, that cloud of suspicion remaining, a classic Baxter tactic.

DSM identifies the narcissist as " 'interpersonally exploitive,' i.e., uses others to achieve his or her own ends." It gives us closeup insight into his apparent view of himself: of the omnipotent, worldwide, IARN Network with offices girding the globe engaged in missions befitting Mother Teresa, his views sought out by leaders of the free and non-free worlds as well as important media, such as the Wall Street Journal and major TV Networks.

We are left with an impression of grandeur, when, in fact, this is but one person, Glenn Baxter, and his Radio Shack recorder on timers and a loop. We would be less than honest if we didn't acknowledge a certain value in the production and distribution of such a bulletin.

To read the DSM criteria for narcissistic disorder is to gain full insight into Baxter. Having 5 of the following qualifies him: 1) Feels grandiose and self-importance (e.g., exaggerates achievements and talents to the point of lying, demands to be recognized as superior without commensurate achievements), 2) Is obsessed with fantasies of unlimited success, fame, fearsome power or omnipotence, unequaled brilliance ..., 3) Firmly convinced that he or she is unique and, being special, can only be understood by, should only be treated by, or associate with, other special or unique, or high-status people (or institutions), 4) Requires excessive admiration, adulation, attention and affirmation -- or, failing that, wishes to be feared and to be notorious (narcissistic supply), 5) Feels entitled. Expects unreasonable or special and favorable priority treatment. Demands automatic and full compliance with his or her expectations, 6) 'interpersonally exploitive' ..., 7) Devoid of empathy. Is unable or unwilling to identify with or acknowledge the feelings and needs of others, 8) Constantly envious of others or believes that they feel the same way about him or her, and 9) Arrogant, haughty behaviors or attitudes coupled with rage when frustrated, contradicted, or confronted."

Quoting Baxter: "He (meaning me) has been on Prozac for several years now and recently a mood regulator as well ... . While apparently making him happier, I now find Bob to be a different functioning human being with regard to his great intellectual abilities."

For sure, Glenn; thanks for the kudos. Deprakote, a mood regulator, prevents those leaps into grandiosity, bad judgment, irritable episodes, pressured speech. The intellect remains, albeit, for more productive pursuits. There isn't a person in my inner circle, including myself, who has failed to notice a vast change for the better. For some, Deprakote can be a miracle drug.

Consider it Glenn. Just a bit of harmless Deprakote can make you the achiever you've only imagined thus far.

Bob Sherin, W4ASX

In a message dated 1/21/03 9:59:55 AM Eastern Standard Time, K1MAN14275 writes:

Scroll to bottom se see Bob Sherin's epistles that prompted this K1MAN Editorial:

K1MAN Editorial - ED030121

Does Glenn Baxter Need Medical Treatment?

Bob Sherin, W4ASX, is a generally well meaning, intelligent, and kind man. He has been on Prozac for several years now and recently a mood regulator as well, according to what he tells us when he gets on 20 meters. While apparently making him happier, I now find Bob to be a different functioning human being with regard to his great intellectual abilities. The last time I talked with Bob on the phone he assumed that I, like him, had just gone through a nasty divorce. Not so, of course, since I have been happily married to my angel wife Bonnie (my first and only marriage) for 23 years now. We have no children.

Bob keeps bringing up Hurricane Andrew and the now world famous $25. IARN was indeed activated for Hurricane Andrew, and we had operators in parts of South Florida where the communications was out. No, I did not personally run down to Miami and hold Bob's hand.....I ran the net from Maine, as I always do during a large scale communications emergency. No, I have never asked Bob about his troubles since he resigned as an IARN Director. I am a busy man.

Regarding the $25, Bob said he made some phone calls and photo copies with regard to my appeal to the five FCC Commissioners and the bogus $3,600 in fines they mailed to me in the early 1990's The appeal was never addressed by the FCC, by the way, Real rebellious of me, right? Anyway, I sent Bob the $25 and he said he never got it. It did not come back, so, being paranoid, I figured Bob was stiffing me. I then sent him $50 and that made him happy for a while. Now, years later, he talks about it almost daily. Bob needs to let go. And it's "paltry" Bob, not "paultry."

When Riley Hollingsworth, FCC Special Counsel, sent me long letter in December 2001 (see www.arrl.org and search under K1MAN), saying, essentially, that K1MAN (and W1AW!) were now somehow illegal, I

responded that he, Riley, should request a refund from wherever it is that he claims to have attended law school. How else is one to respond to a guy who was sick on the day they taught law at law school?

IARN has had hundreds of volunteers since 1985, and there have been many who have dropped out over the years and even started splinter groups, some quite important such as Dave Larsen's (KK4WW) FAIRS, and Hap Holly's (KC9RP) RAIN (An acronym that I coined with Hap one day on 20 meters). Great! IARN continues to evolve and is now the IARN Amateur Radio Peace Corps Foundation, Inc. complete with 501(c)(3) status from the IRS. AARA is a registered trade mark with the U.S. Trade Mark and Patent Office, and www.K1MAN.com had 64,582 hits during the month of December, 2002.

We are just starting to get warmed up! Bob's diagnosis of me doing what I do for my own "self aggrandizement" is another way saying that I do what I do to "self actualize" in a healthy and natural way instead of feeling good about myself in a totally artificial manner by using drugs such as Prozac. My wife Bonnie says I am a narcissist. My Webster Collegiate Dictionary defines this as:

"Erotic feelings aroused by one's own body and personality."

Isn't this exactly what Prozac is supposed to do for you, Bob???? I deny the erotic part Bonnie AND Bob!! You want to hear about erotic? My wife Bommie arouses my erotic nature, big time! The radios just don't do that for me in quite the same way!

Bob goes on saying I am:

"Inauthentic, grandiose, voluable (I had to look that one up), paranoid, rebellious of authority and generally a threat to the well being of ham radio and homeland security."

I hope Bob doesn't charge me another $25 for the paranoid diagnosis and his recommendation that:

"....with treatment, he could clean up his act and make a genuine contribution without the overriding negative."

Here is how Webster defines paranoid:

"A chronic mental disorder characterized by systematized delusions of persecution and of one's own greatness, sometimes with hallucinations."

I can see it all now!

"Doctor, Riley is trying to shut down K1MAN! The ARRL ignores AARA and IARN. ND8V is a meanie to me on 14.275. Bob Sherin says that I am '....generally a threat to the well being of ham radio and homeland security.' K1TP's 14.313 Web Site (go to www.qrz.com

search under K1TP) is comparing me to Hiram Percy Maxim
who started ARRL and also invented the machine gun.....
etc., etc." By the time I got done talking ham radio
politics for a solid hour, the Doctor would either have
me forcefully sedated, confined in a straight jacket, or
else commit HIMSELF to our local mental hospital.

I might be well known by many hams. People at my banquet table at
Dayton always ask for my autograph.....that's a hoot, of course. And
we have done some wild things around the world over the years. But
in violation of the Logan Act? Come on Bob, who is deluded now?

Can AARA, the American Amateur Radio Association, inherit the role
of representing our precious hobby and service if ARRL goes down like
the Titanic or suffers the same fate as the Dinosaurs who once ruled
the earth? Sure.....this is America.....look at Microsoft over
shadowing IBM and look at CNN who had to sue to be allowed to cover
the White House. Ted Turner and Bill Gates sure as hell are not
modest, and they don't need to be "souped up" daily with Prozac!

As I said, Bob Sherin is a well meaning, kind, and intelligent man. I
have my own dysfunctions, to be sure. We all do. What the hell is
"normal" anyway? Let the free market forces of ideas determine how
my career continues to play itself out and what the fate of AARA and
IARN will be. This national and, indeed, international arena of free
ideas is a rough and tumble playing field and sometimes gets a little
nasty. I do what I have to do to get the job done. So does Bill
Gates and Ted Turner. This is America.......hellllllllllllooooo!!!!!

I really don't know which list this is but I do scan these emails with
interest. Having known Glenn since the 80s and being credited by
Glenn with constructing his legal defense, I am long on experience and
insight.

It goes without saying that an independent organization with its own
outlet to disseminate information has vast potential. Without
question many of the Glenn's activities have helped folks. And so,
the idea of ham radio and kids is surely worthwhile. If it weren't
for Glenn's history, many would join him; however, he has alienated
virtually everyone who has worked with him -- save for a few
exceptions.

Quite simply, many question his judgment. When you tinker with
foreign policy in Iraq et al. you have crossed the line into bad

judgment and pose a threat to Homeland Security. I know that Sam and Glenn see their actions as well meaning and maybe they are. But the Logan Act commands citizens to stay out of foreign policy, a law that Sam in Australia would have little knowledge of. Since Bougainville, I have been agahst at what I hear.

Two other incidents turned out conclusive as to my opinion. One was reimbursement of $25, a paultry sum one would relegate to insignificance. So when Glenn began tilting with me over this very simple and clear reimbursement, I knew there was some problem inside. (He eventually antied up.)

The second incident was the ultimate trier of fact for me. When Hurricane Andrew demolished our community here, I was perhaps 2nd in command (if anyone is in command there, other than Glenn). I knew that this is where we shine, so I awaited IARN. To date, it hasn't arrived, nor has Glenn ever inquired about the extent of damage and resurrection.

Thus, reality developed: that Mr. Baxter is in this for his own self aggrandizement. We all do things so that we will become better, but in Glenn's case it's this exagerrated sense of self importance. I have watched this "disorder" worsen over the years, as the text books tell us. He is inauthentic, grandiose, voluable, paranoid, rebellious of authority and generally a threat to the well being of ham radio and homeland security.

I do believe, with treatment, he could clean up his act and make a genuine contribution without the overriding negative. I write these "truths" at the risk of Glenn's threats notwithstanding firm foundation.

God bless you all,

Bob Sherin, W4ASX

Gentlemen, before we are overcome with mob mentality, let's step back and take a deep breath.

That's what I did, as I gathered my past journalism on Glenn Baxter and
the IARN to send to Brian, K3VR. Brian is involved in a major journalistic project on this subject which is worth reading. I had written two cover stories in January and February, 1989, and a follow-up
in March, 1989 that were published in Florida Skip Magazine.

Among other things in that dossier was an IARN accord with the Young Communist League of the then-Soviet Union. I must admit here and now, I
was an "official" participant.

Transfixed by mulling this earlier time, I lost myself in reading the record. Picking myself up, I began wondering how we've come to the present time in which we're accusing Baxter and his organization of nefarious conduct.

At the time of the Soviet initiative, we hams in the West were starved for communications with Soviet hams after having lived through the trigger-happy Cold War. So when the Armenian Earthquake struck and UB5WE, Victor from the Ukraine, came on announcing he could handle third
party traffic, everyone involved thought a watershed had arrived. The technicalities of obtaining permission paled to no consequence.

Ever since, Glenn Baxter has carried on this nonchalant attitude toward
what is essentially foreign policy. Bougainville, Somalia, Jordan, Israel and others. He, his organization and his associates are violating the Logan Act, which limits foreign policy to our federal government. At the sound of Bougainville, I took flight.

Glenn Baxter: Misguided, irresponsible, yes. But terrorist, no. Let's
survey his sincerity. When the cameras are running and the broadcast waves crackling, he is at his charismatic best. I sent several video tapes to him of me representing the network on Miami television during natural disasters. Though he vowed to return them, he hasn't.

We so advertised our emergency capability that when Andrew hit, demolishing my community and home, I awaited my leader. We had no food,
telephone, electricity, law enforcement. A week. Two weeks. A month.
Six months. To this day, Baxter has never as much as asked me a thing about it.

Like a magician, his total pre-occupation is the aggrandizement of his own image. One must listen with a wary ear and read with a wary eye lest the magic trick you. The U.S. Supreme Court did not hold that his
bulletins are legal, as he would have you believe. Rather the Court propounded the principle that once a thing is litigated, that decision is a bar to another suit on the same issue. Known in legal parlance as
res judicata, Baxter bootstrapped this principle and his bulletins, taking a giant leap. We are thus led to believe, the Supreme Court would annoint his bulletins, let alone busy itself with hearing an appeal on them. Nonsense.

In the 80s, the FCC declared, with some measure of formality, Baxter's broadcasts legal. But with the arrival of Riley Hollingsworth, Esq., our regulator at the FCC, Baxter and his bulletins have fallen under scrutiny again.

Hollingsworth mailed Baxter a certified letter on January 29, 2002 detailing the FCC's complaints. In it Baxter is warned concerning "complaints we are receiving about deliberate interference, threats against those who do not relinquish the frequencies for your use or who
would complain, or who have complained, erratic operation, broadcasting,
unauthorized tape recording and broadcast of telephone conversations, business use of an Amateur station and lack of station control ... ." Up to the time of this writing Baxter has failed and refused to comply.

Meanwhile, he continues enlarging his broadcasts. Hams, wanting to use the frequencies, are livid. Uncomprehending, Baxter sees some kind of plot against him, as well as an ARRL highly-paid agent behind it.

But Baxter's conduct is more sufferable. He's defaming Mr. Hollingsworth as nothing but a cheap crook, a claim this writer finds bold-faced slander and completely contrary to fact. As Americans, we cannot allow a well defined controversy to weaken the power of government nor to throw our community into anarchy.

The wheels are grinding on that letter of January 29, 2002. And when action is taken, Baxter will lose his ham radio license, this commentator predicts.

A participant in anything people desire to do is markedly superior to a mere wanna be. You'd prefere amateur radio to sink to your level rather than attempting to meet the qualifications for entry. Sad.

> As a
> result we get the continuing talk-downs, insults on the persons of

> voting, membership status, receive the monthly Spectrum
> membership magazine plus all other newsletters requested.

I'm a life member of the ARRL and a life member of QCWA. My number of years as a League member and my age total 93. The sum of my years as QCWA member and my age equals 68. Add the two together and you have 161. By odd coincidence, this is the number of power poles between Cameron and Bethlehem, West Virginia.

The ARRL, of course, is an amateur radio organization. This is an amateur radio newsgroup. You are not a radio amateur.

The chicken-wire idea will do fine - just be sure to make decent electrical
connections.

I use a propane torch with solder-iron attachment for antenna work. Does the trick in any weather.

Congrats and good luck! If you want to try out CW, let me know.

Hmmm....

Total up my age (48), my years as a licensed ham (35), years as an ARRL member
(34), years as a BSEE (26), years as an MSEE (10), years working in jobs
related to electrical engineering (30) years as a homeowner (24), and you get

>
>What the HECK is that supposed to mean?

I wanted amateur radio instead of something else. If I chose the other item, I could have amateur radio later. Obviously I did not know this at the time. I know this now. I chose amateur radio and ended up with neither.

>>Then, the train ran me over.
The train is the system. (Another metaphor).

From: "KB9TMP"
>> > I could not see the light at the end of
>> > the tunnel.
>
>He should have taken his sunglasses off first before going in.
That's true. The signs were there all around me. If I didn't have those sunglasses on, I would be able to see it. The problem was that I thought it was me, when it was everyone. So, I did not take the sunglasses off. Had I done that, I may have changed my plans.

This thing could be right out of the twilight zone. Unfortunately it actually did happen to me (and similar circumstances happened to a lot of other people). I was playing a high stakes game. I am not a gambler, but when ur in the situation, you MUST gamble. The thing is even with the best of intentions one may suffer the consequences.

>No. Absolutely not.

Ditto again. If we changed that rule, we wouldn't be "Amateur Radio" anymore, would we? Personally, I don't want to be listening to commercials on my local repeater!

>Current rules are adequate for today's ARS in both cases.
>
>What do others think?

I think you're right. The only thing that needs to be fixed is to undo the Restructuring and bring more meaningful licensing requirements back into the system.

Bill:

I just want to say here in the NG that I really enjoyed our FANTASTIC PSK-31, Hellschreiber, and RTTY QSO! It was a real blast! I also enjoyed the screen shot you sent of my Hellschreiber signal from your end -- I am absolutely flabbergasted at how well it printed considering the puny power and my 35-cent, ten-year old, indoor dipole! This was REAL ham radio in action, my friend! It was also great talking to you over the phone and being able to associate a voice with a call sign among my fellow rrap participants!

All of this made my think about how great it would be to have digital QSO's with all the rest of the rrap NG participants! Anyone interested? I'm available all day Sunday, each weekday after 2300Z, and all day Tuesdays. I have MixW 2.06 digital mode software, and can work you on PSK31, RTTY, Hellschreiber, AMTOR, and, naturally, CW! Let's do it!

> glorify and venerate your local CPR instructor as a God of Lifesaving.

WRONG LARRY! I am not aware of the laws in your state, but the Good Samaritan Laws of my state dictate that if you render aid to someone else, as long as you act up to the level of your training and not otherwise negligent in other actions you are in a better shape if there is some type of lawsuit. I say this because when doing CPR, there is a great possibility of injury to ribs etc. due to the force applied to the chest.

With refresher training, what is wrong with that?

As far as carrying the card on you..... that may be a false statement as I have never been asked directly for my card, but may if a case ever goes to court. There is a case where you better have it with you.

Glorifying and venerate a instructor as a God of Lifesaving??? Where the hell did you pull this one out of?? About the only way I consider any of that what so ever is if I have had an awesome instructor who had a great knack for teaching, as this applies to any class taken, not just CPR. This is a skill that should be respected, not discouraged. As far as putting them that high on a pedestal, I would love to know who put that idea in your head.

> After completing my own First Aid/CPR Instructor training many years ago
> while stationed in Germany, I came to the conclusion that I wasn't going
> to adopt the mandatory asshole posture with my students.

But that seems to be okay to have that here eh? That actually was a good attitude to have with your students. People are more receptive that way.

I just taught
> them how to do basic First Aid/CPR and let it go at that.

That would be the basic function of an instructor. Those that "got it" quicker than the others would require less of your attention than those that might be having a problem with certain areas. This applies to jsut about any teaching.

If they encounter
> someone choking to death, or not breathing, or WHATEVER, I don't want
> them to think they have to stand by and let someone die just because it
> has been more than 12 months since their last refresher class!

Common sense would hopefully dictate actions in that regard. (In an ideal world that is....)

Nobody
> is going to get sued for trying to help -- that just doesn't happen!

Well... beg to differ as I can dig up (with a little time) plenty of cases of where people got sued (or named in a suit at least) here in Michigan alone. Whether or not the suit was sucessful or not is a different story.

As far as training goes, I am all for it. After all, if you are going to have a situation ever in the future where you required emergency care, would you wish for someone who pursued minimal training or "barely passing results?" I would think not, as if I was in that situation, I would wish for the person(s) with the best training. Refresher courses help to keep those skills active as well as there are some changes from time to time in training that a person should be made aware of.

I'm neither poor nor a baby. Do your homework. I had two postings in
Finland, a non-third world country. I had four African postings. During
one of them, I used CW. You continue to attempt to equate your military
experience with amateur radio.

And Vipul says >>I<< am "illogical"...!

>>>Then, the train ran me over.

>The train is the system. (Another metaphor)

If you have to explain it....

>Had I done that, I may have changed my plans.

Simple fix, Vipul...Write "CANCEL" across the front of your license and mail it to Gettysburg. They'll take it from there. THEN stop posting to a newsgroup for a radio service for which you obviously have no interest or respect. Lastly, go to one of those "ham" fests and sell whatever Amateur Radio gear you possess and be done with it.

>This thing could be right out of the twilight zone. Unfortunately it actually

Nor does it take much technical knowledge, either. Hams today can buy everything they need for an HF station already manufactured, complete with instructions for assembly and use. Why should they have to learn all sorts of technical stuff to get the license?

A ham who just wants to operate CW on 3520 kHz has to pass three separate written tests covering a wide variety of technical and regulatory subjects. Most of those subjects are not needed to operate CW on 3520, but the tests must be passed anyway. Why?

>What is the "good reason" to keep the code requirement?

Here's one. There are lots more:

- It's a test of a skill widely used by hams. (Have you ever listened to the CW/digital parts of the HF ham bands?)

FCC doesn't agree, and the 5 wpm code test will probably disappear soon after the treaty changes. Until then, we're stuck with the code test.

>Gawd, I think I'm gonna be sick.

You misunderstand, Hans.

The "Equalizer" effect is simply that a prospective ham is not likely to have learned Morse elsewhere, and has to demonstrate his/her skill on an EQUAL basis with others, in an objective test. It's about equality of requirements.

Harrison Bergeron was about equality of result. Anybody with greater talent was handicapped down to the common level.

Perhaps I can state it another way:

One of the most common arguments against code testing I have read here is from people who list their accomplishments in non-amateur radio as some sort of reason why they should not be required to pass a Morse test. As if those accomplishments somehow made them experts at amateur radio and above the rest of us mere mortals. Their argument boiled down to this: Since they had credential X in non-amateur radio, they should not be required to learn something they didn't want to learn in order to get an amateur radio license.

Sorry if you were offended. I calls 'em as I sees 'em. I'm not electropolitically correct.

If you want to say you are American Red Cross trained, YOU MUST follow
their rules. If you let your license lapse, its on you.

> After completing my own First Aid/CPR Instructor training many years ago
> while stationed in Germany, I came to the conclusion that I wasn't going
> to adopt the mandatory asshole posture with my students.

I'm unfamiliar with the mandatory a$$hole posture. Is that where the
instructor says he's an Amateur Extra?

I just taught
> them how to do basic First Aid/CPR and let it go at that. If they encounter
> someone choking to death, or not breathing, or WHATEVER, I don't want
> them to think they have to stand by and let someone die just because it

> has been more than 12 months since their last refresher class! Nobody
> is going to get sued for trying to help -- that just doesn't happen!

Exactly. And the ARC doesn't want to get sued either. That's why
they want you to have current CPR training. I'm suprised that your
current employer doesn't require you to have the training also.

Too bad the ARS doesn't require periodic training and recertification.

HAW! That's a GOOD one!

But they were calling me "OM" at the age of 13. One of those
traditional things.

Say, Larry, you can play the "years" game, too. Add up your age, years
as a licensed ham, years of military service, years with a bachelor's
degree, years with a driver's license, years with a CDL, years as an
ARRL member, plus any other years you find usable and see what the
total is.

SO WHAT?

Frankly Vipul, you seem to bear great prejudice against old and overweight people. I know many old and heavy people who are just wonderful and a joy to be around.

What exactly is wrong with them?

Sounds to me like ol' Vipul used to be a freebander, then got a
license. Expected all sorts of Elmers to come out of the woodwork and
address his every question and suggestion with the utmost reverence.
(The "16 vestal virgins" mentioned in a post by Hans). Didn't happen
the way he planned. Thus all the weird posts and strange definitions.

Bottom line: Same basic situation as Mogadishu Slim. He claimed
operation from T5 but never gives any details such as rigs and
antennas used, stations/countries worked, bands and modes used, QSLs
sent and received, call used, etc.

End result: I don't give trolling bootleggers the time of day. Nor do
I respond to their posts.

I sit on a committee that writes local cellphone tower ordinances,
and the big push that I detect from the representatives of both the
wired and the wireless telephone industry is to get rid of the wired
network between the "wire centers" (we used to call them Central
Offices) and subscribers entirely. "They" say that it is coming, and
it won't be too long before new connections and expansions will be
wireless only, copper wire and the necessary maintenance being very
expensive.

IMNSHO - if this starts to be "popular" I predict that the FCC Rules
will be changed to require a licensed control operator in real-time
control of every amateur transmitter (no more automatic repeater or
packet relay) with said control operator making real-time go-no-go
decisions on appropriateness of content (just like the "entry-point"
operator 'sposed to do on packet forwarding). One more step down
the ladder for amateur radio.

I know just the communications law firm that would push such a
Petition for Rulemaking... <ggg>

> How can that be?

Because the idiots in City Hall dissolved the old Civil Defense Office structure with its cross-trained members "because it wasn't needed any more" just days before the Baldwin Hills Reservoir disaster in early December 1963 (my years as a volunteer in LA was 1958-1961). Most of the cross-training was in command-post operations and status reporting in addition to my service with the Sheriff's Reserve. The thought was that if someone was unavailable, there could be someone else with training to drop into the slot. Not being an amateur radio operator, you wouldn't have been clued in to this aspect of operations.

The present agency that I volunteer with - Washington County (Oregon) Emergency Services - uses RACES/ARES teams as communicators at served agencies (local EOCs and hospital facilities) but enables those of us who want to be cross-trained in other specialties to get that training and to participate in Citizens Emergency Response Teams (CERT), the volunteer part of the Emergency Services mix. Many non-ham CERT volunteers have gone through the amateur radio license course to get their own license as well, making them eligible to use tactical RACES facilities during an exercise or an actual incident for status reporting and resource requests (most of our exercises involve curtailment or unavailability of agency communivations during part or all of the exercise). Some folks even get on the air for "traditional" amateur radio activities.

Some agencies believe in it, some agencies don't. Mostly the decision depends on availability of staff and money and the personal bias of the agency's Emergency Management person towards encouraging or not encouraging cross-trained specialty volunteers.

Instructor status is no big deal.

My ex-wife is the senior instructor/certifier for first aid and CPR
at a major medical center. When we were still married, we used to
team-teach it to the public for the American Red Cross. Even though
she's my ex, she's still one of the best in the field (helps to have
been a phys ed and health ed teacher before becoming a respiratory
specialist/nurse).

Instructor status is no big deal. <ggg>

He ought to add in all the years he was on FIDONET telling everyone how good he is, all the years he was on Internet telling everyone how good and superior he is/was, all the years he was in university getting all those good grades to guarantee his choice of human resources jobs he would get after graduation, plus all the Russian girlfriends he had, etc., etc.

:-)

>basis with others, in an objective test. It's about equality of requirements.

Translated: "Everyone has to do it like *I* did it..." :-)

Hello? The license is NOT granted on conformance to some
mythical "community." It is granted by the FCC, a government
agency chartered to regulate US civil radio.

The FCC does NOT mandate OOK CW transmission over and
above any other mode by US radio amateurs. There is NO
recommendation by any ITU-R that all the world's radio amateurs
must use OOK CW mode. The morse test is only a
recommendation on test methods to be granted an amateur
license by an administration.

>Harrison Bergeron was about equality of result. Anybody with greater talent
>was handicapped down to the common level.

So...all the argument is about a FICTIONAL person...who doesn't
get involved in amateur radio? Tsk, tsk.

>Perhaps I can state it another way:

...not very well, but continue...

>One of the most common arguments against code testing I have read here is
>from
>people who list their accomplishments in non-amateur radio as some sort of
>reason why they should not be required to pass a Morse test. As if those
>accomplishments somehow made them experts at amateur radio and above the >rest
of us mere mortals.

Ah, but the self-described "experts" in amateur radio keep
elevating themselves as "superior" in radio because of their
longevity/experience/tenure/callsign/class/etc. and also as
emulation models...and all the while sneering at the pros
(while not identifying their own alleged professional work).

No problem. It's a well-known double standard in here...

>Their argument boiled down to this: Since they had
>credential X in non-amateur radio, they should not be required to learn
>something they didn't want to learn in order to get an amateur radio license.

You keep getting it WRONG! Tsk, tsk.

The morse code test controversy is NOT about that. It is
about the illogic of mandating a skill test for ANYONE who
wishes an amateur license. ANYONE.

The morse code test controversy is fueled by the terrible
insistence of the already-morse-tested to do "just like they
had to do."

Those already-morse-tested keep wanting "the Great
Equalizer" when there is NO government requirement to
USE morse modes over and above any other mode.

>Sorry if you were offended. I calls 'em as I sees 'em. I'm not
>electropolitically correct.

You're just not correct. Keep trying, though, might be hope
for you.

Right. I probably should have used the term "proficient in morse". We
certainly wouldn't want to see you "bothered" by those pesky amateur
radio license exams. You didn't do radio 24/7 ever and there is no
professional equivalent to DXing.

Nobody has to or even can do what I did. The maximum morse testing
speed for HF privileges is now a measly five words per minute. Even you
could do that.

> Those already-morse-tested keep wanting "the Great
> Equalizer" when there is NO government requirement to

Seems to refer to the alleged k1man broadcast
posted in the original message....make of it what you will
it is amazing is not how both sides in this ham radio operators and stuff
like it
expend all so much wasted energy on nothing but bluster and
posturing? They should all be working for North Korea's Ministry
of Propaganda! I hope I have this much free time when I am an
old fart with nothing but ham radio to play with...

(and the band plays on while the angels sing high-hyms!)

---------- cut here ---------

Email from Brian Crow:

*****To Prevent Panic and Unnecessary Frequency Abuse*******

Regarding the Mexican Earthquake in the Colima and Jalisco region:

After conferring with Carlos Gelista, Mexico's Director of Emergency
Management for the Civil Protection Agency, the Mexican Embassy, in
Washington D.C. reported to this writer at 10 AM this morning, that "no
international assistance is required, requested, or needed," for the recent
Mexican earthquake occurring on the Pacific coast west of Mexico city,
Tuesday evening at 9PM EST.

Salvation Army Team Emergency Radio Network on 14.265 mHz is
monitoring, but not activated, in case assistance is required. Satern
reports,
"Communications there are up and operative. The situation there is under
control."

The SATERN net control reported, and I quote, "The Mexican government is not
requesting International assistance. Stay away from the operator on 14.275
mHz with the 1 call. That station is illegal and has been fined by the FCC
on numerous occasions. He must be a millionaire, to have gotten all those
fines and still have his license," end quote.

Yes folks, the credibility gap continues to widen ... And that's the way it
is.

"K3VR reporting on Wednesday morning, January 22, 2003."

Naaaaah...Cowards always call taunts from the darkenss but never come into the light, Dave. This is the only promise Lennie will ever keep...He'll never be an FCC licensee in teh Amateur Radio Service. And all I can say is thank goodness and good riddance.

And I still haven't heard any reports of his Part 15 efforts on any Amateur allocation, his assertions tha he can operate there notwithstanding. Guess he's still trying to talk across town on 11 meters with Vipul.

It has been a while but I believe the Pro's at a nearby Cat III ER told me
that, because the point is to massage the heart through the rib cage--a
difficult task at best, a few cracked ribs are forgiven. I think the idea
was to be careful to apply sufficient force, otherwise you are wasting the
patient's time, which at this point is precious little.

I know this seems like I am going back on my promise to be nice, but...

From: anla@mindspring.com (a)
>> Now that it turned out that hams had nothing to do with your problem,
>> are hams still "dorks"?

>All one needs to form an opinion for this question is attend the Ham
>Fest at the NC State Fair grounds.

So, someone else agrees. This is exactly what I've been saying. Social misfit is so apparent, one just needs to attend a random Hamfest and you will see. Operating radios in a bar is NOT the normal activity to do. If the amateur rock band that was scheduled at Boxboro Hamfest actually played, I might have stuck around for the Wouff Hong ceremony. Although it was funny those people in costumes chanting "Wouff Hong, Wouff Hong, Wouff Hong, …" at the dinner buffet.

I know it has been said that Hams that go to Hamfests is representative of all Hams. Apparently no place that Hams get together represents Hams.
You know this does not make sense. Yet, the 1% of EEs represent the technical achievement of the hobby for publicity purposes, when polls indicate Hams are not interested in technical topics except antennas. Same goes for "service". It's in QST, but not mentioned in my local paper.

This is not illogical because I provided supporting evidence.

I sense a touch of prejudice against non-EE hams in your post; am I wrong? Sorry, Vipul, but I wasn't interested in electronics back in high school, so I made the decision to become a chemist instead. Never worked in the field, but science has always been interesting to me, as I am sure it is to many hams.

I have some EE friends. They have hobbies as diverse as skydiving, skiing and flying. Not all tech-types necessarily want to have tech-hobbies. Depends on the person. I'd say that if you think antennas and propagation are interesting, then ham radio is a good hobby for you. If you aren't an EE by trade but still like to tinker with electronics, it's a good place too. There aren't many women in this hobby, but I don't feel uncomfortable here because most of my hobbies have been more male-oriented. Who cares? I don't.

Vipul, I just don't see evidence of this crowd of losers you keep referring to. The last hamfest I went to had a good representation of young and old, and there were quite a few women there too.

As an ER Nurse I can tell you that if you did NOT break ribs during CPR,
you were either (1) very lucky, (2) NOT applying sufficent pressure (3) Doing
CPR on someone with rubber ribs.

To be accurate, we don't "massage" the heart, but aggressively compress it.
The point is to mechanically cycle the heart by squeezing it between the
sternum and the spine. The "textbook" depth for an adult is 1.5 to 2 inches.
On the average adult, that's 35% of the thckness of the chest.

73 and hope none of you ever need CPR...

>I have some EE friends. They have hobbies as diverse as skydiving, skiing
>and flying. Not all tech-types necessarily want to have tech-hobbies.

It's ironic you mention skydiving and flying, Jackie. I certainly can't speak about every concievable avocation, but persons involved in the aviation industry (airline pilots, mechs, etc...) have been one of the few groups I have ever known that also partake in it as a "hobby".

I try to get some of the folks I know at work to partake in weekend clinics to rural areas but very few want to do that "on my days off".

>There aren't many women in this hobby, but I don't feel uncomfortable here
>because most of my hobbies have been more male-oriented. Who cares? I don't.

You go girl! I often get quizzed about why I am in Nursing. Some think it's to be around lot's of women. Trust me, it's not all it would seem cracked up to be! And others ask me if I don't feel "out of place" in a mostly female enviroment. Hardly...When we are knee deep in body parts and puking patients, the LAST thing on my mind is whether or not I might "get lucky" with my partner.

Ham Radio would certainly be a more colorful place with more lady operators, but it appears the interest is just not there. The doors are open, however, and here's hoping they stop by and take a look!

>Vipul, I just don't see evidence of this crowd of losers you keep referring
>to. The last hamfest I went to had a good representation of young and old,
>and there were quite a few women there too.

If you go into any enviroment looking for something, chances are you'll find it to the exclusion of evidence that balances your expectations. Vipul goes to hamfests looking for for overweight, "old" males. He finds some.

Me? I go to hamfests looking for radios, friends and rot-gut hot dogs. I find plenty of all three!

> Why bother with old Harrison when we have Leonard Anderson, a
> real person who doesn't get involved in amateur radio.

Hold on a sec, Dave....

How do we know that Leonard Anderson is "a real person"? All we really know is that someone using that name has posted here since at least 1997, using a variety of screen names. Some posts are signed, others are not. There has even been a half-hearted attempt to conceal who the poster was. Not to mention his sending unsolicited email with obscene attachments, then refusing email replies from tose spammed.

Whoever the person behind those posts really is, he/she obviously has no real interest in amateur radio beyond newsgroup arguments and insults toward radio amateurs. Remember the claims of VEC fraud (based solely on prejudice against young hams), ARRL "dishonesty" (no evidence of any kind presented) and "going for the Extra right out of the box" (three years ago, no license yet)? Says it all, really.

And since Mr. Anderson obviously has no intention of ever getting an amateur license, why is he so interested in things like age limits for ham licenses?

Ask his motivation, and you won't get a credible answer.
>
> > >Perhaps I can state it another way:

>
> Oh--I get it! You're back to pecking about trying to find out where Jim
> works.

Bingo.

Some questions to ponder:

Since I don't work at the FCC, the ARRL, or a communications law
practice, what does it matter where I work? It's simply not relevant
to amateur radio policy.

Why does Mr. Anderson want to know that information so much?

How has he behaved towards others when such information has been
presented? Has he been appreciative of the work of medical
professionals, for example? Or career State Department employees?

Ever notice that Mr. Anderson demands all sorts of information and
proof from others, but rarely if ever provides any of his own, except
to brag about decades-old experiences paid for by others?

Reminds me of someone who claims to have operated a ham station in T5
about a decade ago, but who does not answer straightforward questions
like:

What bands and modes were used?
What antennas and equipment were used?
What callsign was used?
About how many other hams were worked?
How were the QSLs handled?
How many countries/continents/states/QSOs were worked?

Why bother to respond to someone who won't or can't answer such basic
questions, yet demands irrelevant information from others?

> I think you might have misstated the rest of it.
>
> > No problem. It's a well-known double standard in here...

Exactly. Mr. Anderson has one standard for himself, another for those
who disagree with him.

Exactly. Same with sending tests, secret written tests, FCC office
testing, etc. All long gone. Not coming back, either.

> Even you could do that.
>
Maybe...IF he wanted an amateur radio license above the Technician
level. But he does not want an amateur radio license. So why bother
with such a person?

> > Those already-morse-tested keep wanting "the Great
> > Equalizer" when there is NO government requirement to
> > USE morse modes over and above any other mode.
>
> The FCC, in its great wisdom, probably figures that most of us have
> mastered that speaking stuff.

There is also no requirement to use any particular mode, band or
technology, yet the written tests are full of questions on things most
hams will never do, and which hams are not required to do.

Why is it logical to require hams to pass a written test full of
questions on things hams are not required to do? Why did I have to
learn about UHF/VHF, transistors, SSB, FM, and a variety of other
things just so I could work Morse on 7010?

> I have great hope for Jim.

Thanks. Perhaps we will have an on-air QSO again soon. Been too long
since the last one...

>I don't hold forth the same hope for you.
>
Then why bother to respond to him?

Mike Deignan had the guy nailed years ago.

I prefer a good old fashoned Chivas Regal, Jageimeister or
Seagrams 7 plus 7Up every now and then, plus seein the old
lady in a "naughty nightie" or better yet a Wicked Weasel
Swimsuit (Wooo - Hooo!!!!!!) every now and then is good too..

> Consider it Glenn. Just a bit of harmless Deprakote can make you the
> achiever you've only imagined thus far.
>
> Bob Sherin, W4ASX

Bob, Glen needs to turn off his tape player and fly down to
Miami to meet you. I highly suggest Spring Break when all those
cute College Girls head down to Key West and South Beach
and dance an show off ("show me yer t-ts!") like they do
in that Girls Gone Wild video. It's an all-night party which really
re-vitalizes the ole male testoserone glans and can give the
both of you a whole new perspective on life apart from all
this 20 Meter Ham Radio bull shit. Airfare is quite reasonable
now and Glen can get a non-stop from Portland to Miami and
be at you home for dinner on the same day if he leaves early!
Afterward you can both go bar-crusing in South Beach or simil;ar
venues and have yerselves one heck of a good time! Consider it
OK?

Check it out---> http://www.southbeach-usa.com/

Clever story, but I'm afraid I'm past that age of partying.

As to "Public Citizen" under the law you quote, and "Private Citizen," as defined by the Logan Act, the two are mutually exclusive. Remember, in law, you must first look at the definitions under the specific statute. You can't necessarily take one definition in one statute and apply it to another.

As to the Logan Act, I read yesterday that no one has been prosecuted under it in 200 years. The Patriot Act, enacted as a result of terrorism, is more apropos.

Analysis from afar where we have such a long history of bizarre behavior doesn't take a rocket scientist. Does anyone doubt that Napoleon and Hitler were megalomaniacs? Yet this is judgment from afar, for sure.

Yesterday, with tape loop rolling on 14275, Baxter staged a phony emergency. He purportedly was rendering assistance in the wake of the Mexico earthquake. Yet Brian, K3VR, who contacted Mexican authorities, was told that communications were intact and no help was needed.

Is this "normal" behavior?

I'll bet you are in a fairly rural area. In Palo Alto they love wires so much that AT&T is in the process, as we speak, of becoming the third company to install fiber optic cables on the street behind the house, but in the Santa Cruz mountains I've noticed cell towers with directional antennas for backhaul as well as substantial resistance to do anything about fixing a shortage of copper to a place where I wanted DSL service, which leaves me the option of a wireless link to Loma Prieta. Wire still rules where the number of subscribers per mile of wire is high enough, but the subscriber-density barrier seems to be increasing.

But notice that still only makes the wireless access segment a little longer, relatively speaking. My cell phone's log says I've called as far as Guangzhou, Hong Kong and Port of Spain, Trinidad in its short memory, and I know which medium was used for most of the distance. There is clearly some utility in being able to use an untethered radio handset with a range of a few miles as access to communicate over much greater distances, and it seems to me this is true whether the handset is a cell phone or a 2 meter H/T.

>time of examination.

Yup.

But there are plenty of folks who know enough radio to pass the writtens without much, if any, preparation. Except for a few who learned Morse in, say, the military of years ago, most new hams start from scratch with the code.

I'm not saying the code test must be kept because of this "Great Equalizer" effect. All I'm saying is that the reason SOME folks hate it so much is because they do not want to have to learn a new and different skill just to get the ham license.
Particularly when that skill has relatively little application outside of amateur radio, and cannot be learned by reading a book or watching a video.

When somebody makes a lot of noise about their non-amateur radio activities as some sort of qualification to judge amateur radio license requirements, it's pretty clear what their message is.

>> Yes.
>
>Not based on anything I've seen from you here.

There's an old tale about a group of mice trying to figure out what to do about
a cat that is making life difficult for them. One mouse comes up with the idea
that they should tie a bell on the cat's tail, so they can hear the cat coming.
Everyone thinks it's a great idea - but nobody wants to have the job of tying
the bell on the cat.
>
>> >"Less code"
>> >What is wrong with live and let live?
>>
>> Nothing. And as soon as they stop tying the code test to the license
>> classes, this will occur.
>
>The only one doing that today is the FCC.

And only because ITU S25.5 requires it. FCC has specifically said that the treaty requirement (yes, it's a treaty, and yes, it's a requirement) forces them to have the code test for amateur licenses with privileges below 30 MHz. In other words, FCC isn't going to ignore a requirement of a ratified treaty.

>Others that wish to keep
>it that way are free to take that position. If you believe otherwise,
>then support the change when it is proposed. It won't be proposed
>until after the international treaty is changed.

And there's no point in proposing it until the treaty changes, because we know what FCC's answer would be.

My bet is that as soon as the treaty is changed, FCC will just dump Element 1. No NPRM or comment period, just an announcement that Element 1 is waived for all applicants until a formal proposal can be acted upon to change the rules. Reading FCC's Report and Order to 98-143, plus FCC's responses to various petitions for reconsideration convinces me that FCC won't keep code testing without S25.5.

>total is.
>
>73 de Jim, N2EY

Jim:

OK, here goes:

Age: 50
Years as a ham: 21 (Just received Old Timer's Club certificate)
Years as an Extra: 20
Years as an ARRL member: 22
Years of military service: 19 (took early retirement in the mid-90's downsizing)
Years with a CDL: 2.5
Years on rrap: 12
Let's see, that makes me 146.5 years old. Shouldn't I be in a nursing home by now?

After Lloyd's last jail stay, he complained of a pain in the rectal area.

(Be careful Lloyd, one of the first signs of AIDS is a sharp jabbing pain in your rectal area)

After being examined by Dr. Seymour Butts, Lloyd's rectal passage was found to be as large as a # 4 washtub. Lloyd's cellmate Big Bubba claimed full responsibility. Big Bubba said, "Lloyd likes it and I know he's a queer, 'cause when I was poking him, he had a boner".

Lloyd was told he has PBDS by Dr. Butts.

Lloyd was at first ecstatic at having something to blame his erratic behaviour on.

Recently however, Lloyd found out what PDBS meant.

Jeez, I know exactly what James does and exactly where he churns his
daily bread, he has lives in his hands hourly and he's a well-known
MSEE pro in that biz. No mystery at all.

Can't imagine why The Putz isn't up to speed on all of it, he
obviously knows everything else. He must be losing his surfing skills.

I seriously doubt that.

In this vein I can't find a peep abt S25.5 being on the WRC agenda so
far, seems to have been shoved aside to concentrate IARU & ARRL
firepower on the 40M realignmnt issue.

A small earthen-wall dam failure was a "disaster" of city-wide
proportions? I don't think so. It was a most SLOW disaster
if so and all TV viewers here in Greater Los Angeles could
watch it happen all afternoon. At most it wiped out some
houses on a cul-de-sac street. I don't remember any fatalities.
Nice coverage by channel 5 and their new telecopter.

1963 is over 40 years ago, Phil.

Los Angeles County has a good REAL disaster center now
and it was proven effective in 1994, nine years ago.

Tsk, tsk, tsk. Can't even surf the FCC website?

Look for items 1.7.1, 1.7.2, 1.7.3, all handled by IWG-6. All kinds
of documentation there on it.

The IARU came out with "firepower" over a year ago, that "big gun"
being a Very good PDF document, excellently illustrated, without
any apparent influence by ARRL. It's on the IARU website. :-)

>know is that someone using that name has posted here since at least
>1997, using a variety of screen names. Some posts are signed, others
>are not. There has even been a half-hearted attempt to conceal who the
>poster was. Not to mention his sending unsolicited email with obscene
>attachments, then refusing email replies from tose spammed.

Who has ever seen a "signed" message in any newsgroup?
Include newsgroups that allow binaries. This newsgroup does
not have binaries. The closest one can get to a "signature" is
to use one of several public-key encrypted authenticators.

What is all this about "obscene attachments?!?" Is a mistake
"obscene?" Is a lack of humor about it "obscene?" Is a frightful
enormous ego on the part of the recipient and a demonstrated
rage afterwards "obscene?" :-)

>Whoever the person behind those posts really is, he/she obviously has
>no real interest in amateur radio beyond newsgroup arguments and
>insults toward radio amateurs.

Tsk, tsk, tsk. Insult by innuendo. That badly becomes
someone who has "lives in his hands hourly."

"Interest in radio" is NOT confined to possession of an amateur
radio license grant...regardless of what Miccolis and others
imply.

>Remember the claims of VEC fraud (based
>solely on prejudice against young hams), ARRL "dishonesty" (no
>evidence of any kind presented) and "going for the Extra right out of
>the box" (three years ago, no license yet)?

No such "claims" were made. Some things were pointed out
about the "six-year-old hams" as pictured on the ARRL news
page. Apparently some fortysomething long-timers have very
touchy egos about two children getting their first ticket seven

years before they did... :-)

Oh, dear, another fantasy or lack of reading skills. I was
definitely going for extra-out-of-the-box? No. What I wrote
was that I "could." That's a "maybe" condition. A positive
declaration is to say "I shall." I have never "shalled," not
even "shilly-shalled." :-)

So far, there has been little presented in here to encourage
joining a bunch of key-beeping little boys masquerading as
grown, mature men to "be as good as they." :-) :-) :-)

>Says it all, really.

Says nothing, Miccolis. All it demonstrates is that you
cannot take any strong opposition without letting your ego
ruin your judgement.

>And since Mr. Anderson obviously has no intention of ever getting an
>amateur license, why is he so interested in things like age limits for
>ham licenses?

Just who is this Miccolis person to ask?

Who has "made an issue" of age limits? Not I. One mention in
a Reply to Comments on NPRM 98-143 of 13 January 1999 and
some in here seize on that (the last item of 14 text pages) as a
"cause celebre" or some sort of "world crisis!" :-)

>Ask his motivation, and you won't get a credible answer.

Oh, my, now "Judge" Miccolis defines credulity! :-)

>Since I don't work at the FCC, the ARRL, or a communications law
>practice, what does it matter where I work? It's simply not relevant
>to amateur radio policy.

Ah, so Miccolis is ashamed of what he does for living?

>How has he behaved towards others when such information has been
>presented? Has he been appreciative of the work of medical
>professionals, for example?

You must mean Nursie Putz, the Kildare-wannabe?

> Or career State Department employees?

...who was never on any "key lists" of State in public view?
...or acted like they were the archtypical "ugly American?"
Harf! :-)

>Ever notice that Mr. Anderson demands all sorts of information and
>proof from others, but rarely if ever provides any of his own, except
>to brag about decades-old experiences paid for by others?

Oh, my, selective amnesia! I've given names of all my former
employers in here. I've given names and callsigns of licensed
radio amateurs still living as references. Is more required? :-)

Perhaps so...since Miccolis will NOT accept any credibility
until all agree with Miccolis' opinions. He is "Judge." :-)

Miccolis lives in the state of Pennsylvania according to his
information on the public FCC database. From there on
there is nothing except the testimony of W3RV (the "man of
26 patents"). Is that anything like one Michael Deignan
who gave a Hawaiian PO Box address and was a "good
person-friend" to one fella named Herman? :-)

Miccolis must not like what he does for a living. He doesn't
talk about it. Who knows, maybe he doesn't work for a
living? There's no way for anyone to know...

>Exactly. Mr. Anderson has one standard for himself, another for those
>who disagree with him.

Tsk, tsk, tsk. :-)

There's no "double standard" going on, yet Miccolis looks in the
mirror and thinks the reflection is someone else. :-)

Give PROOF, not fantasy. Things don't become "true" just
because you imagine them...or worse, WANT them to be
like the imagination. Tsk, tsk, tsk...

If given proof, research it, determine if it is true...the ACCEPT
it if so based on those references. Do NOT accept hearsay
as "evidenciary." Except maybe in fishing...

>Maybe...IF he wanted an amateur radio license above the Technician
>level. But he does not want an amateur radio license. So why bother
>with such a person?

Miccolis cannot "accept" anyone unless they agree with His
Way of Doing Things! :-)

>There is also no requirement to use any particular mode, band or
>technology, yet the written tests are full of questions on things most
>hams will never do, and which hams are not required to do.
>
>Why is it logical to require hams to pass a written test full of
>questions on things hams are not required to do? Why did I have to
>learn about UHF/VHF, transistors, SSB, FM, and a variety of other
>things just so I could work Morse on 7010?

For questions on the "why" of US amateur radio written test
content, contact your friendly neighborhood VEC QPC.
The VEC Question Pool Committee determine written test
content, the FCC quit doing that some time back. The FCC
quit specifying a minimum number of question subjects, too.

All the FCC specifies is a minimum number of questions per
written test element, the minimum number of correct answers.

>Mike Deignan had the guy nailed years ago.

Tsk, tsk, tsk. Deignan bailed, didn't nail.

In fact, Mikey D lost a number of his "Hawaiian club calls," too.

"Cross your legs, Jimmie, I have only one nail left..." :-)

>Welp, the little chest pin shows a parachute. What do you think?

Then I'd say your comment about declining further service because of Airborne duty was misleading, at best. Obviously you DIDN'T decline since jump school is voluntary, unless you are training for SpecFor or RANGER.

I'd also say that, considering your past performance in THIS forum, I am not surprised at that revelation. Being direct and accurate are not your forte.

I'd furthermore add that I doubt the chestpin ever adorned your regulation Army uniform...At least not where anyone who knew you might see it and know better.

Lastly, I'd say it was PROBABLY a set of those "Jr Birdman" wings the kids can pick up at a lot of airshows. Or perhaps a set of wings purchased from Brigade Quartermaster or other such outfitter. The REAL Armed Forces are kinda particular about who get's to wear those wings.

Steve, K4YZ

(BTW...I have a set of USN/USMC jump wings too...Never wore them since I never earned them, but they sure do look good in the collection)

Ah ahhh ahhhhhhh LENNIE! You said YOU did HF radio 24/7.

I quote your comments to Mike Coslo of four days ago:

Why is it "necessary to work DX?" With a ham license (an
amateur radio license grant, that is...). I did that a half
century ago on a 24/7 basis as part of ACAN, without any
license whatsoever.

FOR EMPHASIS :"I did that a half century ago on a 24/7 basis..."

There you go again, Lennie...Thinking we wouldn't see through yet another
of your attempts to substitute a "Lennism" for the truth.

>>Where have I said any such thing?
>
> All the time. Untrue, but you keep hoping that someone

> that reply was just another personal insult instead of talking

> about the subject.

YOU pay attention, you lying sack of fermented barnyard excrement...You have absolutely NO credibility here...You make vile, ugly accusations you never back up with facts or evidence, your attempts to embellish your Army service are shameful, and YOUR personal attacks on anyone who dares to "engage" you in what YOU term "debate" are nothing less than cowardly and demeaning.

Whatever contributions you THINK you made to radiocommunications has been long ago blunted by your ego, your lies and your self-serving tirades in this forum.

Now crawl off to where ever it is you sequester yourself when you've made a fool of yourself again...And stay there.

Putz.

> enormous ego on the part of the recipient and a demonstrated
> rage afterwards "obscene?"

To consider anything you do as humourous is obscene.

To hold yourself out as some sort of technology-smart professional when
you make such a simple "faux pas" with an e mail attachment is obscene.

The thought of you with an FCC Form 660 with your name on it is obscene.

>"Interest in radio" is NOT confined to possession of an amateur
> radio license grant...regardless of what Miccolis and others
> imply.

In THIS forum it is AMATEUR Radio. A program you have publicly scorned and
ridiculed. The (implication) is that you are a liar. But THAT doesn't take
much imagination to accept as plausible. YOU provide reams of evidence to
SUPPORT it.

>>Remember the claims of VEC fraud (based
>>solely on prejudice against young hams), ARRL "dishonesty" (no
>>evidence of any kind presented) and "going for the Extra right out of
>>the box" (three years ago, no license yet)?

> No such "claims" were made.

And there you go and prove me right! AGAIN!

>No such "claims" were made. Some things were pointed out
> about the "six-year-old hams" as pictured on the ARRL news
> page. Apparently some fortysomething long-timers have very
> touchy egos about two children getting their first ticket seven
> years before they did

The "touchy ego" here does NOT belong to any licensed Amateur, but rather
to an egotistical lying ex-radio technician by the name of Leonard H. Anderson,
ex-Army radio station clerk of 1950's era...The SAME lying Leonard H. Anderson
that formulated an idea to the FCC to impose AGE RESTRICTIONS to a radio
service that has not had any reason to do so in over 80 years of existence.

>Oh, dear, another fantasy or lack of reading skills. I was
> definitely going for extra-out-of-the-box? No. What I wrote
> was that I "could." That's a "maybe" condition. A positive
> declaration is to say "I shall." I have never "shalled," not
> even "shilly-shalled."

Another untruth, but in the light of so many, what does it matter now?

>So far, there has been little presented in here to encourage
> joining a bunch of key-beeping little boys masquerading as
> grown, mature men to "be as good as they."

Yeah...Decades of accolades bestowed by private and governmental agencies alike is not much inducement...Nor is the potential value of a license that grants privileges far-in-excess of what ever "commerical" license held by Lennie. The one-and-only priviledge granted by Lennie's GROL is the one to hire one's self out as a radio technician.

Whoooopie dooo.

>>Says it all, really.
>
> Says nothing, Miccolis. All it demonstrates is that you
> cannot take any strong opposition without letting your ego
> ruin your judgement.

Thee is nothing "strong" about Leonard H Anderson except for the stench of decay and disease as he litters the Internet with his demeaning and denigrating bile.

> Who has "made an issue" of age limits? Not I.

Caught in ANOTHER lie. Anderson is priceless.

>>Ask his motivation, and you won't get a credible answer.
>
> Oh, my, now "Judge" Miccolis defines credulity!

He doesn't have to. It's in the very fabric of lies YOU weave. The post this one quotes alone is rampant with them. So how can you call ANYTHING you write "credible", Lennie? YOU don't give us anything to base trust in...

>>How has he behaved towards others when such information has been
>>presented? Has he been appreciative of the work of medical
>>professionals, for example?
>
> You must mean Nursie Putz, the Kildare-wannabe?

How many times have YOU be cited for lifesaving, Lennie?

>There's no "double standard" going on, yet Miccolis looks in the
> mirror and thinks the reflection is someone else.

Sure there is, Lennie. YOU set THAT "standard". You lie, you call names, you make untruthful assertions you cannot verify or back up, then you CLAIM that YOU are somehow the injured party.

> "Cross your legs, Jimmie, I have only one nail left..."

Sounds like a threat to me.

Putz.

Larry,

Please refrain from spreading deliberate misinformation.

A very large percentage of NCI's membership have passed Morse
tests ... many are Extras, or other countries' equivalents thereof.

Most of NCI's Board of Directors have passed Morse tests and
hold higher classes of license ...

And, once again, we do NOT oppose the (voluntary) learning
and use of Morse, nor do we have any intention to ban or restrict
the use of Morse in any way ... we simply oppose the Morse TEST
as an unnecessary requirement for licensure in today's world.

> 73 de K2ASP - Phil Kane

Depending on who you talk to, that's one viewpoint.
The perspective Phil offers is narrowband (voice) centric for the
most part.

The other driver of new home
connections is increased demand for bandwidth and new services which
consume significant bandwidth. Try delivering 200 channels of TV
via wireless. Look at the proliferation of cable modem connectivity
to internet, DSL, etc.

More likly for suc bandwidth demands we will eventually see fiber optic
delivery direct to the home at some point. Alternatively, fiber can deliver
the services to an area focal point and then the "last mile" could be
via cable (RG-59 or the like).

My point in adding this info is to suggest that the future network(s) won't
end up
as a "one technology fits all" topology. Odds are there will be a mixed
environment with different costing and revenue models that drive the choice
for any
particular area.

Cheers,
Bill K2UNK

I never said I gave him anything that wasn't already his ... I said we
support
his freedom of choice.

> You have demonstrated repeatedly that you are as fanatical toward doing
> away with code testing as anyone who supports continued testing. If you
> suupported "freedom of choice" you'd have no problem supporting the view
> of those who believe that testing should remain.

The logic fails, Dave ... supporting the view that Morse testing should be
forced on all, like it or not, is NOT supporting freedom of choice.

I recognize that those who want to keep Morse testing have a right to
hold that opinion ... but they don't have the right to force it on everyone
else. NCI doesn't try to force its view on anyone ... nobody twists
anyone's
arm to join NCI, and members are not held captive, as the previous exchange
demonstrates.

So, don't try to assert that we are somehow violating the rights of those
who
believe Morse testing should remain, because we are not ... we acknowledge
that there is a minority that feels that way AND that they have the right to
those
views. On the other hand, we (NCI and its members) have an equal right to
our views.

So what? If they are qualified, they are qualified ... period.

Your argument goes back to the "work ethic" philosophy where folks
argue that people shouldn't get a license without having to "demonstrate
their dedication by working hard (jumping through hoops) for it."

More to the point, there is nothing in NCI's efforts or charter that is targeted at ending USE of morse. THAT is the bottom line to those that want to see morse continued as a mode on ham radio. One does NOT need a test to be able to learn and use morse on the air.

The major concern/fear (IMHO) of pro-code test advocates is that without any test at all, new devotees to the use of morse won't just happen to appear because they were mandated to learn morse just to gain HF access. Without the mandated CW test process, those that want to see morse continue in use will actually have to market their reasons why they use code in the open marketplace of mode competition to new (and existing) hams.

Cheers,
Bill K2UNK

Is "working hard (jumping through hoops)" in reference to the 5-wpm exam?

Nice turn of phrase but obviously way above the receptive language
skills of at least one reader. Plainer to say "his work involves
safety-critical EE stuff, among other things" and leave it at that.

>No mystery at all.

Not to those who have the need to know.

Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior.

So there's no reason to go into anyone's qualifications, because they
don't count for a thing with Mr. Anderson if that person disagrees
with his views on amateur radio. All those who disagree with him are
one and the same to him.

If you need any evidence of this, just look through posts here by any
of his many screen names.

> Can't imagine why

(Mr. Anderson)

> isn't up to speed on all of it, he
> obviously knows everything else.

You are mistaken about the last part. Lack of knowledge on his part
has been proved again and again, here in rrap and on other newsgroups.
Not that he will ever admit being mistaken on anything.

>He must be losing his surfing skills.

Indeed.
>
> > > The morse code test controversy is fueled by the terrible

>
Not a major issue anymore. I'll be surprised if it takes any more
agenda time than the minimum required to propose elimination of S25.5
and do the vote. Of course I hope I am mistaken about this and that
S25.5 survives WRC-2003, but I doubt very much that will happen. And
once the treaty (yes, it's a genuine treaty) changes and is ratified,
FCC will most probably dump Element 1 ASAP.

40 meters is actually a much more important issue for HF amateur
radio, for a bunch of reasons. The real question is: can a better deal
be struck with the SWBC folks?

I'm not so sure about that, Jim. Perhaps we may see some European "ringers"
in there. ;-)

>I'll bet you are in a fairly rural area.

Not hardly...it's urban metro Portland, where gobs of what used to be protected open space 20 miles away are being developed into low to medium density occupancies.

The area that I live in was developed 40 years ago, and is as wired as Qwest ex-US Worst ex-Pacific NW Bell is going to. ATT Cable just fiberized their system (forced to by the area cable franchiser) so I have cable modem service. I tried to get DSL several years ago but I'm 22,000 cable feet from a Portland CO literally at the end of the US Worst cable plant - the Verizon ex-GTE territory starts two houses to the west - and they didn't say no, they said hell no, we're not putting in any more wire plant. I had to jump up and down (and cash in a few industry IOUs) to get them to replace the "we don't have any more good pairs" cable to give me a pair quiet enough to sustain a 56K modem at 33K in dial-up service until ATT got around to upgrading this neighborhood a year ago.

Fun and games....

For this purpose, "wireless" is via satellite, and it's being done
every day all over the world. A goof friend of ours (and an
active ham) lives so far out in the boonies that he can't get cable
or DSL service, and he connects to the world through satellite. He
loves it. He got that idea from the American Red Cross (he's a
retired disaster communications officer - paid professional
staff) where he was in charge of the switchover of their
long-haul communications network to the PanAmSat system.

>More likly for suc bandwidth demands we will eventually see fiber optic

>
>So your outfit worked distance. Super. There is no professional or
>military equivalent of DXing.

So...24/7 multiple circuit HF communications across the
Pacific is not "DX?!?"

Oh, yes...no QSL cards traded and no "DX Buro" run by
ARRL, an amateur organization. But...wait...

The ACAN Pacific net DID "trade" a form of QSL in the
regular 3-a-day circuit operating reports between stations
and the FAX test patterns were autographed pin-up
pictures used in once-a-week test transmissions... :-)

>Regardless of what ADA did, you never worked 24/7 anywhere. Your claim
>is ludicrous.

Now, now, little colonel, don't pop a plate cap...you are glowing
a cherry red... :-)

You must have forgotten military service...which IS 24/7...unless
it is certain "USAF units who worked with NASA." No doubt
they operated equivalent to unionized civilian contractors while
the REAL USAF communications units (such as the 16th
Communications Squadron next to ADA on Tuskishima) did
definitely work 24/7.

>That's right. Nobody works 24/7. The very idea is preposterous.

In the 1950s the US Army Medical Corps had a rule that all
personnel must be allowed 4 hours sleep in a 48-hour period
to maintain functionability. That meant 44 hour awake times.
I did a mere 35 hours (plus-minus one) twice...which exceeds
24 hours.

>> Heil SNARLS, then. There is no "mumbling" in his text.
>
>Then why'd you state otherwise?

Small sounds from small people sound to me like "mumbling."
Sort of like trolls who emerge from under bridges waving their
J-38s as a badge, saying "worship me, I am superior to you
because I am an extra amateur!" :-)

>Uh.....tsk, tsk, tsk, Foghorn. You'd previously begun using your "Herr
>Robust"
>term and didn't respond to the comments. You still haven't.

"Oberst" is a German military rank equivalent to colonel.
"Herr" is an honorific term of Germanic origin equivalent to
the English "mister." "Herr Robust" is a play on words, an
honorific for the robust manner in which Heil engages in his
Teurtonic Tantrums of Talk-down to "inferiors." :-)

For an audio-visual aid, see Otto Preminger's performance
in the motion picture "Stalag 17."

Aw, heck, mighty morseman...I rather LIKED the phrasing of "having lives in his hands hourly!" One could almost laminate that and keep it in a wallet... :-)

>Besides, here's a simple, plain fact:

[in Miccolis' world view, that is...]

>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior.

If chastisement about ignorance of the rest of the radio world is an "insult," then I am guilty of "insulting the ignorant."

If refusal to bow down to claims of "superiority" by those favoring morse code modes, then I am guilty of "ridiculing the self-proclaimed "superiors." :-)

If creativity in naming certain correspondents according to their appearance in this newsgroup, then I am guilty of "name-calling." Of course, the "extra double-standard" is at work there such as another constantly using "Putz" and "creep."

"Factual errors?" Surely the mighty morseman jests. Individual OPINIONS are not "fact." Disagreement with certain traditions (particularly of the standards and practices

of the 1930s) is NOT "factual error." Disagreement with
certain individuals' INTERPRETATION of publicly-known
statistics is NOT "factual error." :-)

No doubt the mighty morseman Miccolis is unnerved and
irritated by the rather absolute non-veneration of his
amateur superiority. Tsk, tsk, tsk. Sic transit gloria mundi.

>So there's no reason to go into anyone's qualifications, because they
>don't count for a thing with Mr. Anderson if that person disagrees
>with his views on amateur radio. All those who disagree with him are
>one and the same to him.

If the above means equal-opportunity commentary about
anyone puffing themselves up as the Absolute Amateur
Authority, then fine.

I enjoy such equal opportunity. Follows democratic principles.

It's the American Way. Does the mighty morseman Miccolis
disagree with the American Way?

>If you need any evidence of this, just look through posts here by any
>of his many screen names.

Ooooo! Ooooo! :-)

How is it "evidenciary" of anything other than AOL not allowing
some full legal names as "screen names?" :-) :-) :-)

My full name (the "payroll signature" variety) and current
mailing address has been published in Ham Radio and
BYTE and Microcomputing magazines as well as the
Call-A.P.P.L.E. monthly news periodical in article bylines
over 20 years ago, on the FCC web site in 1999 about
public comments on NPRM 98-143. The "payroll signature"
and the city residence name and then-current corporate
identification has been published by the US Patent Office
(visible on the Delphion patent website), McGraw-Hill
Electronics biweekly magazine, RCA Corporation and
Rockwell International corporate reports (some available in
the larger technical libraries).

How can mighty morseman Miccolis claim that is somehow
akin to "anonymity?" :-) :-) :-)

>You are mistaken about the last part. Lack of knowledge on his part
>has been proved again and again, here in rrap and on other newsgroups.
>Not that he will ever admit being mistaken on anything.

That is, obviously and by evidence of Google archives,
WRONG.
WRONG, Jimmie.
W-R-O-N-G !

Lack of APPRECIATION for certain mythical fantasies,
certainly!

Lack of WORSHIP in the Godliness of Morse, absolutely!

Lack of ass-kissing of self-proclaimed masters of the
radio universe (ham radio division) guaranteed!

Go thee to Google, grasshopper, you have much to learn
and atone for thy attempts at character assassination.

>Not a major issue anymore. I'll be surprised if it takes any more
>agenda time than the minimum required to propose elimination of S25.5

Tsk, tsk, tsk...not even June in Geneva and ALREADY a
Sore Loser!

Pity that.

>40 meters is actually a much more important issue for HF amateur
>radio, for a bunch of reasons. The real question is: can a better deal
>be struck with the SWBC folks?

The TWENTY-FOUR YEAR suspense must be overwhelming
to mighty morseman Miccolis! [that small issue has been on
the books since WARC-79!]

The "SWBC folks" have had digital audio transmission on HF
for three years. Some radio amateurs still say "it won't work!"
It works. Some radio amateurs still insist that mighty morse
modes are the "best" and "get through when other modes fail!"

Status quo, circa 1930 among some amateurs... :-)

Leonard H. Anderson
- alleged anonymous person using screen names
"LenOf21," "AveryFineman," and a couple others
on AOL, an alleged heinous "crime." :-) :-) :-)

"Payroll signature" is a common term for first name, middle
initial, last name as required in the US military to sign for a
monthly pay. Those who've never served in the US military
will be unfamiliar with the term.

I disagree. It is quite obvious that "we" (NCI and its members)
are NOT allowed any sort of "equal right" according to some
mighty morsemen.

Mighty morsemen are superior in all respects and they expect
respect in all things.

To them the morse test MUST STAY! It is a divine thing, never
to be removed (heresy)!

All must do as the mighty morsemen did. Period.

> or more, so why anyone would think that wireless phones
> were a technology advance is beyond me.

It's a real advance in Finland (home of Nokia), where they don't have anything close to our wire infrastructure. Something like 50% of phones in Finland are wireless. In developing countries down the road, it's more than possible that they never will have a copper infrastructure; it won't be needed.

Now, Len, I'm going to tell you that I appear in each of the Key Officers lists from 1988 through 1995 and from 1998 through 2000. Any possible exceptions are through the error of an Admin officer to update by the deadline date or because I was between posts on consultations when the list was submitted. Feel free to do your own research on the rest of historical material. This is simply another instance in which you've not known what the hell you were talking about.

Oh, and if you are worrying about my being an ugly American towards you, kindly furnish information as to your nationality. If you are other than a United States citizen, I'll provide a personal apologize promptly.

Dave K8MN

Seems to me that the "hard"est part was actually deciding to get one's butt
in gear and then sit down and just do it. Fifteen minutes to a half-an-hour
daily for as long as it takes hardly constitutes "working hard (jumping
through hoops)" to me.

Lennie is correct. In "Stalag 17", starring Bill Holden and produced by
Billy Wilder, Otto Preminger played the part of Oberst Von Scherbach.

You have it mixed up with Stalag 13, the home of Oberst Klink, Sgt Schultz,
Colonel Hogan, et. al.

Makes no difference to me or NCI what they are called. The only
thing that counts is that not one of the arguments, statements
and/or rationalizations has convinced the FCC of any need to
retain code testing...other than to stay compliant for now with the
current ITU treaty.

While some in the PCTA group might wish that is so, the
reality is that we have that right and we have excersized
that right without being silenced by anyone.

The war of ideas and opinions on morse testing is over
and the only thing standing in the way of a total demise of
morse testing is the treaty. That's why I don't bother
engaging in the arguments anymore.

> Mighty morsemen are superior in all respects and they expect
> respect in all things.

They can believe whatever they want...its a free country.

> To them the morse test MUST STAY! It is a divine thing, never
> to be removed (heresy)!

Opinions of such have failed the test of time and analysis by
the FCC.

> All must do as the mighty morsemen did. Period.

The end of that era is not far off.

Cheers,
Bill K2UNK

DBS has its shortcomings too. Most that I know of require separate
decoder boxes for every TV. My basic cable service (some
70 odd channels) requires no onsite boxes at all unless I opt for
a premium channel. That allows every TV to be its own
tuner. No boxes to rent. If you are in the boonies as you note, satellite
is probably your only option even with the shortcomings.

Wireless phones allow many folks (myself included) to
essentially have an office on their belt. We are no longer
tethered to a fixed location. Likewise I have found
traveling with cellphones to be an outstanding communication
and logistics capability when traveling with others.

And, as noted above, sme countries won't likly ever have
a hardwired infrastructure. Several years ago
I worked on a proposal for a 3rd world
country that had as a requirement NO copper cable because
theft of cable for the copper was too prevalent.

I'll play this sillyass game.

Age: 65
Years as a Ham: 50
Years as an Extra: 35
Years as an ARRL member: Spotty, maybe 25 out of my 50
Years of Military Service: Zip for purposes of this discussion
Years driving long-haul 18-wheelers long before there were CDLs: Had
to do with flatbed 40 foot stake bodies fulla Joisy tomatoes and the
nonsense ya get into to pay yer way thru injuneering collitch. Gimmee
3.
Years on RRAP: 5??

183 "RRAP Age Points" for Romeo Victor.

Who says it wasn't voluntary??? I didn't say that? And I didn't say
I declined further service.

Where did you get that idea?

Where do you get any idea?

Maybe you got it on the rrap backchannel where that civilian with
"vast military experience" hangs out.

It was offered, I declined. Nothing misleading in my statement,
nothing about being forced, nothing about being voluntary or
involuntary. And nothing about declining further service.

You must have a bending jig attached to your computer.

> I'd also say that, considering your past performance in THIS forum, I am
> not surprised at that revelation. Being direct and accurate are not your

Completely direct and accurate.

You can have a second try if you wish. Really. I'm up to it.

> I'd furthermore add that I doubt the chestpin ever adorned your regulation
> Army uniform...At least not where anyone who knew you might see it and know
> better.

I never wore an Army uniform. Did have to sew a 2ID patch on my uniform, though. Really screwed up the correct placement of my chevrons, however. They were practically on my elbow, even with the bottom of the shield nestled into "V" of my chevron.

> Lastly, I'd say it was PROBABLY a set of those "Jr Birdman" wings the kids

Where did you get wings from? I didn't say wings. I said p-a-r-a-c-h-u-t-e. How could you confuse wings with parachute? Oh, I forgot. You were a marine, where you had to learn little ditties to keep things straight (this is my rifle, this is my gun...).

> Steve, K4YZ

> never earned them, but they sure do look good in the collection)

??? Point ???

I did have an Air Medal pinned on me at an awards ceremony about 1991. The only problem was that I earned an Army Commendation. But the awards/dec office screwed up and sent the wrong medal, and they needed something to pin on me, so an Air Medal it was. Well, it was pretty funny at the time. You had to be there. Got a picture of it somewhere, but I'm just a has-been now and don't live in the past.

Of course, I never wore an Air Medal again, don't even have one in my "collection." The only things in my "collection" are the awards I earned. Someday when you go SK, someone is likely to see those wings in your collection and try to bury you in Arlington. Wonder if you've got a Medal of Honor in there. If you're not already making up tales of bravery now.

Nope.

What I'm talking about is why SOME (not all) folks dislike the code test so
much. Particularly folks for whom the written test presents no challenge at

all.

Some (not all!) just don't like the idea of having to learn a skill specifically for the ham license - particularly since that skill usually cannot be learned in bits and pieces by reading a book or watching a video.

Why is it "jumping through hoops" to learn Morse at 5 wpm (even if someone never intends to use the mode), but not "jumping through hoops" to learn all the theory and regs necessary to pass the written exams (even though someone never intends to use 99% of the privileges allowed by the license)? Seems like a double standard.

Since the FCC has determined that the 35 question Tech test is adequate to allow Techs to use all authorized amateur bands and modes above 30 MHz, and to design/build/adjust/repair/align and operate equipment for those bands and modes without further certification, aren't the higher class theory questions really a form of "hoop jumping"?

Why is a new Tech allowed to design/build/adjust/repair/align and operate a 1500 W transmitter on 50.020 CW, (or any other authorized band/mode above 50 MHz), but if said Tech wants to use a 1.5 watt transmitter on 3.520 MHz CW, he/she must take two more written tests totalling 85 questions?

WHOA - I lost ya there.

"we acknowledge that there is a minority that feels that way"

Feels what way? That code testing should go, or should stay? It's really not clear what's being said. Who is the minority being discussed?

Note that when the comments to 98-143 were categorized and tabulated (by an NCI staffer, btw), the majority of those who commented not only wanted code testing to continue, but wanted at least two code test speeds. But FCC agreed with the minority opinion.

>in there. ;-)

Perhaps, but not enough to stop the process. And the opposition may simply use the S25.5 elimination as a bargaining tool.

Think about this deal: Suppose some countries who don't want to give up 7100-7300 SWBC and who want to keep S25.5 offer to accept the end of one or the other, but not both. IOW, suppose the offer is "leave 40 alone and we'll support the end of S25.5". Or maybe the reverse. What will the rest of the world do?

>
>> Of course I hope I am mistaken about this and that
>> S25.5 survives WRC-2003
>
>Me too!

But let's be realistic. Most of the world's governments have already lowered their code test requirements to levels far below what they required only a few years ago, even though ham use of Morse continues unabated. An obvious move in anticipation of complete elimination of the code test.

>
>> , but I doubt very much that will happen. And
>> once the treaty (yes, it's a genuine treaty) changes and is ratified,
>> FCC will most probably dump Element 1 ASAP.
>
>Last hope?

Not the FCC! Read the Report and Order that eliminated all code tests in the USA except Element 1, and the responses to various Petitions for Reconsideration. FCC makes it very clear they see "no regulatory purpose" in any code test for any ham license, EXCEPT compliance with S25.5. Without the treaty requirement, that means no regulatory purpose at all.

If/when S25.5 goes and the new treaty is ratified, what's to stop FCC from simply issuing an order that Element 1 is hereby waived for all applicants for a ham license? Nothing that I can see. FCC can simply say that the issue was adequately discussed and commented on in preparation for the 2000 restructuring, and that they are acting on their earlier decision.

>> 40 meters is actually a much more important issue for HF amateur
>> radio, for a bunch of reasons. The real question is: can a better deal
>> be struck with the SWBC folks?

"DX" is distance. "DXing" (in the Amatuer Radio application) is the
pursuit of contacting as many FOREIGN stations in as many modes and bands as
possible.

Lennie was NEVER a "DXer".

>You must have forgotten military service...which IS 24/7...unless
> it is certain "USAF units who worked with NASA."

However YOU never worker "24/7". YOUR asertion that (you) worked on a
"24/7" basis previously cited and dismissed as usual Lennism.

More usual Leonard H Anders BS. Silly and dismissed with ease.

> --
> 73 de Bert
> WA2SI

Bert,

It's in reference to any unnecessary requirement. Some folks think that the tests are "way easier" today than they were "in the good old days."

I don't want to put words in his mouth, but IIRC, my good friend Ed Hare, W1RFI, of the ARRL, has stated the ease with which he got his general "back when" (as have others).

The written tests aren't an EE final ... never were, never were meant to be, never should be.

The issue is that some folks are PO'd that people who already know all the radio stuff don't have to work as hard as they did (because they didn't know the radio stuff ... hell, many still don't ... I know other extras
who don't have a clue on the technical side.

The point is that that the reason for licensing (and the tests) is NOT to "control the population" or to "keep out the 'unworthy' " ... it's simply to make sure that people have a reasonable minimum level of qualification to operate safely and with a minimum potential for interference to other radio services ... nothing more, nothing less. It is NOT to "make someone prove they are 'dedicated enough' by making them 'work hard' for their license."

Too damned many people value their license for what they perceive as some sort of epic, heroic effort that they made to get it, rather than for what it allows them to do (and the latter is where the value of the license lies).

Not the same ... not knowing how to copy Morse by ear (all that's
tested for) harms nobody ... not knowing some of the technical
aspects can:

result in interference to other services

get you killed when you do stupid things with
your fingers inside a radio

expose your family/neighbors/passersby to RF
radiation above the established limits

etc., etc.

> >I recognize that those who want to keep Morse testing have a right to

The FCC makes the decisions on what best serves the public interest,
convenience, and necessity ... as the expert agency charged with managing
the non-federal-govt. use of the radio spectrum that belongs to all of us,
if they agree with NCI's logical, factual, well-reasoned arguments, we are
gratified :-)

> >So, don't try to assert that we are somehow violating the rights of those

Sorry ... I was talking about the minority that still favors forcing Morse
tests on everyone for access to HF ...

> Note that when the comments to 98-143 were categorized and tabulated (by
an NCI
> staffer, btw), the majority of those who commented not only wanted code
testing

the
> minority opinion.

I believe a reasonable analysis would show that the demographics of ham
radio
in terms of the issue have changed dramatically over the past couple of
years.

If I had a buck for every e-mail I've received thanking me for NCI's
work, I could HIRE someone to install the towers I plan to put up
in the spring, rather than doing the work myself ... (but NCI is PURELY
not for profit, and neither I nor any other NCI officer makes or has
made a single cent for the work we've put in ... in fact, the NCI treasury
owes me about $1k for NCI expenses that I've paid out of my own pocket,
but have not yet bothered to get reimbursed for ...)

Perhaps you, like Len, consider Finland a third world posting. Helsinki was my first posting. I didn't bid on the assignment, I was sent there. I liked it well enough to bid on it again and was reassigned there in the nineties for three years. Except for that third assignment, I bid on all of the others.
Why not give us the benefit of your experience and tell us please, Carl, what makes for a significant foreign service posting? I wanted to see some of the places which the "See European Capitals in Ten Days" crowd never saw. How would three years in a paper mill like Rome equate to three years in Gaborone with the pay not being equal (ever hear of hardship differential?)?

Maybe you figured that Leonard H. was lonely--being the only fellow with brogan inserted in mouth. Your contribution indicates that you have no idea how Foreign Service members are assigned. That aside, Len's comment was one of his typical digs at my Foreign Service assignments, Steve's job as a male nurse and at N2EY for not telling Len who he works for.

> Now I understand why you're such a cranky old fart.

Mark it down as just another thing you don't understand. Have you figured out what explains your behavior? How's the "experimentation" with chasing DX on SSB coming along?

Not only in third world countries either. The phone company I worked for 9 years ago used to have a recurring problem with major circuit outages, in particular in the vicinity of their junction in West Orange, New Jersey, from people cutting chunks out of fiber optic cables where they came out of the ground at railway bridges. I think they got some relief by gluing labels which said "Fiber Optics" all over the exposed stuff, since people were mistaking the glass for copper.

No, I didn't forget military service. I did four years and was never called upon on even one occasion to work 24 hours per day, seven days per week. I knew no one who did that ever.

> No doubt
> they operated equivalent to unionized civilian contractors while
> the REAL USAF communications units (such as the 16th
> Communications Squadron next to ADA on Tuskishima) did
> definitely work 24/7.

Ah, there's your confusion. You've equated yourself with the entire ADA operation. You said YOU worked 24/7. You meant that the unit operated 24 hours per day each day of the week. So you didn't work 24/7.

> >That's right. Nobody works 24/7. The very idea is preposterous.

Wow! Thanks for the language lesson, Leonard. You picked up German in
Korea?
"Foghorn" is a play on Foghorn Leghorn, the blustery cartoon rooster who
knows everything about everything. He is consistently bested by those
he considers mere children. I use it whenever you exhibit such
charactersistics or whenever you begin using cutesy names for others.

> For an audio-visual aid, see Otto Preminger's performance

Nope. In fact, I think the written tests are not well-matched to the privileges granted.

My point is simply that when terms like "jumping through hoops" are used wrt license tests, the same criteria should apply to all license tests.

Why are the writtens a sacred cow but the code a scapegoat?

937. Walter Cronkite's Lawyer sends Glenn Baxter a Letter

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-25 03:22:52 UTC
From: rfburns2003@yahoo.com
Message-ID: <634e00e4.0301241922.4860eb6c@posting.google.com>
Source record: 59970
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.policy

If you've ever wondered why Walter Cronkite would ever allow Glenn Baxter to use his name or likeness, or have anything to do with Glenn Baxter, read on.

A good question for Glenn Baxter might be this: If Walter Cronkite has requested that you NOT use his likeness and his voice and he CLEARLY is saying he wants NOTHING to do with you, why are you STILL doing it?

Those requiring verification of authenticity should call Walter Cronkite's office and ask his secretary Julie to verify that this letter has been sent. This letter is now in the public domain and you may freely distribute it to anyone anywhere.

Walter Cronkite's Attorney, Ronald S. Konecky, Attorney at Law, 488 Madison Avenue, NY, NY, writes to Baxter:

"Dear Mr. Baxter, we are the Attorneys for Mr. Walter Cronkite. Mr. Cronkite, as an accomodation, previously furnished an audio recording, to be used by you merely as a station ID.

Since your use of the recording extended beyond the agreed upon and intended limited station I.D., Mr. Cronkite previously requested that you refrain from any further use of the audiotape or from any suggestion that he endorses your station, operation, or other Associations. You have improperly refused to comply with such request and have continued to use the tape for purposes beyond its intended use.

We have now been advised that without Mr. Cronkite's permission or authorization, you have produced and are now distributing an approximately six minute CD video using Mr. Cronkite and the station identification which he previously furnished.

Such Video constitutes a violation of Mr. Cronkite's rights, is totally improper, and is in addition to your use of the audio identification, a cause of serious damage to his name and reputation.

We accordingly demand that you immediately cease and desist from any use of the audio station I.D.; from the production, publication and distribution of the CD video, and from the use of Mr. Cronkite's name and likeness; in any medium, and on any basis whatsoever."

(signed) Attorney for Walter Cronkite

You're not palying it right.

You left out:

- Years as a degreed engineer (count each degree seperately)
- Years with DXCC
- Years with 5BDXCC
- Years present callsign
- Years with previous callsign
- Years with other radio service licenses (expired or not)
- Years your favorite Scotch is aged

Etc.

It's exactly the same. Note that I wrote:

"written testing beyond the basics of rules & regs on all....."

>not knowing how to copy Morse by ear (all that's
>tested for) harms nobody ...

Perhaps. See below:

>not knowing some of the technical
>aspects can:
>
>result in interference to other services

How? The rules and regs cover things like allowed frequencies and modes. How
can ignorance of things like how a DDS synthesizer works result in interference
with other services?
>
>get you killed when you do stupid things with
>your fingers inside a radio
>
So? There is no license or test required to work on your own house wiring or
home appliances, any of which can easily get you killed. Nor is there any
license required to work on your own vehicle, even though improperly doing such
work can endanger yourself and others.

>expose your family/neighbors/passersby to RF
>radiation above the established limits

Said limits are part of the rules & regs, and covered as above.
>
>etc., etc.

>
What "etc., etc."? Why is a Morse test "hoop jumping", but not the writtens
beyond the Tech?

>> >I recognize that those who want to keep Morse testing have a right to
>> >hold that opinion ... but they don't have the right to force it on
>> >everyone
>> >else.
>> >NCI doesn't try to force its view on anyone ... nobody twists

>>
>> If NCI's opinion holds sway with the FCC, then that opinion is forced on
>> everyone. Simple logic.
>
>The FCC makes the decisions on what best serves the public interest,
>convenience, and necessity ... as the expert agency charged with managing
>the non-federal-govt. use of the radio spectrum that belongs to all of us,
>if they agree with NCI's logical, factual, well-reasoned arguments, we are
>gratified :-)

And they force that opinion on everyone.

And consider this:

The FCC is the expert agency charged with managing the non-federal-govt. use of
the radio spectrum that belongs to all of us. They say that the 35 question
Tech test is adequate indication of qualification to design, build, test,
align, repair and operate amateur transmitters up to 1500 watt output on all
authorized amateur frequencies and modes above 30 MHz. As part of the
restructuring that reduced all code testing to a single 5 wpm test, FCC also
reduced the written testing for the Tech from two separate tests totalling 65
questions to the current single 35 question test.

Therefore, by your own logic, the current 35 question Tech test is adequate to
insure that those who pass it have adequate technical knowledge to:

- avoid interference to other services
- avoid getting killed when they do stupid things with their fingers inside a
radio
- avoid exposing their your family/neighbors/passersby to RF radiation above
the established limits
- etc., etc.

The FCC *is* the expert agency, right? And despite lots of comments about how
to "improve" the written tests, FCC decided that the current written testing
for Tech is adequate for the privileges.

So if the Tech test is adequate for all of VHF/UHF, why is there so much more
written testing for HF/MF? Surely there needs to be a little more testing for
the additional rules and regs (band edges, modes, etc.), but why all that

additional theory stuff on the General and Extra written? Is a QRP transmitter for 21.020 MHz that much different than a 1500 W transmitter for 432.020 MHz that two more written tests are required to use the QRP rig?

Or is it that FCC wants hams to "jump through the hoop" of taking more written tests in order to get more HF privileges?

>> >So, don't try to assert that we are somehow violating the rights of those
>> >who
>> >believe Morse testing should remain, because we are not ... we
>acknowledge
>> >that there is a minority that feels that way AND that they have the right
>to
>> >those
>> >views. On the other hand, we (NCI and its members) have an equal right

>> >our views.
>>
>>
>> WHOA - I lost ya there.
>>
>> "we acknowledge that there is a minority that feels that way"
>>
>> Feels what way? That code testing should go, or should stay? It's really
>not
>> clear what's being said. Who is the minority being discussed?
>
>Sorry ... I was talking about the minority that still favors forcing Morse
>tests on everyone for access to HF ...

Sorry - the minority is those who would remove all code testing.
>
>> Note that when the comments to 98-143 were categorized and tabulated (by
>an NCI
>> staffer, btw), the majority of those who commented not only wanted code
>testing
>> to continue, but wanted at least two code test speeds. But FCC agreed with
>the
>> minority opinion.
>
>I believe a reasonable analysis would show that the demographics of ham
>radio
>in terms of the issue have changed dramatically over the past couple of
>years.

Have you done such a study?

The reduction of code testing in 2000 has not resulted in large numbers of new hams. The number of US hams has grown by only about 10,000 in all that time. And we have not seen significant technical changes brought about by the new regs.

The biggest change brought about by the 2000 restructuring has been large numbers of upgrades by already-licensed hams. That's a good thing, btw.
>
>If I had a buck for every e-mail I've received thanking me for NCI's
>work, I could HIRE someone to install the towers I plan to put up
>in the spring, rather than doing the work myself ...

How many? There are about 685,000 US hams - how many of them are NCI members? How many have emailed you?

I hope the towers help with your SSB DXCC. I think we both agree that good antennas are preferable to raw power. Check out K8MN's webpage - he has some nice ones.

Note first and foremost that the poster deleted the alleged attorney's name. Clue number one. Next, re-read the alleged letter and take note of the misuse of capital letters, i.e., in all the wrong places. Take note also of the odd and misplaced useage of punctuation.
In light of the numerous gaffes one would be on good ground to hold this alleged "notification" highly suspect as originating from an attorney. I wonder if the poster himself wrote this letter in hopes of passing it off as as a factual notification. It is also possible that the poster of this alleged "notification" saw it elsewhere on one of the newsgroups, believed it to be factual, and is ignorantly passing it on.
One would be wise to take this and other such statements with a grain of salt.

So noted. Consider also that the secretary in this case is a dolt. In this
case it would be wise for the alleged attorney to replace her or him. You

just cannot get good help these days.
And how is your pocket protector doing? No more ink-stained shirts?

>If chastisement about ignorance of the rest of the radio
> world is an "insult," then I am guilty of "insulting the ignorant."

The problem is that your own "view" ends at the end of a set of VTVM probe tips. You have repeatedly demonstrated a thoroughly underdeveloped understanding of the PRACTICE of radio.

>If refusal to bow down to claims of "superiority" by those
> favoring morse code modes, then I am guilty of "ridiculing the
> self-proclaimed "superiors.

The only person here making any sort of claims of superiority is by YOU, Lennie. You are the ONLY person here saying any "procode" person made any claims of "superiority". None of the "procode" pesons in this forum have made ANY such claim.

To assert otherwise is a lie.

>Of course, the "extra double-standard" is at work
> there such as another constantly using "Putz" and "creep."

I don't make such claims unless I am ready to back them up. Luckily YOU provide me with lot's of justification, Putz.

>"Factual errors?" Surely the mighty morseman jests.
> Individual OPINIONS are not "fact."

Good. Then we have established that nothing you have to offer is factual.

>Disagreement with
> certain traditions (particularly of the standards and practices
> of the 1930s) is NOT "factual error."

Who here has insisted on the maintenence of "standards and practices of the 1930's"...?!?!

>I enjoy such equal opportunity. Follows democratic principles

No...You ABUSE it. Just like you abused the Honor of U.S.Army KIA's in order to embellish your own reputation.

That's where the "creep" part comes in.....

>It's the American Way. Does the mighty morseman Miccolis
> disagree with the American Way?

Now Lennie the Liar wraps HIMself in "patriotic bunting"...a practice he himself accuses others of doing. Of course only rear area radio clerks may do that without criticsm or correction.

>How can mighty morseman Miccolis claim that is somehow
> akin to "anonymity?"

Because we have neither evidence that the person alleging to be Leonard H Anderson in this forum is THAT Leonard H Anderson, not do we have any evidence that anything you have ever done in the field of radiocommunications was original work.

>>Not that he will ever admit being mistaken on anything.
>
> That is, obviously and by evidence of Google archives,
> WRONG.
> WRONG, Jimmie.
> W-R-O-N-G !

Abusive use of bandwidth noted.

Google archives produce REAMS of errors promulgated by the various screen names of Leonard H. Anderson.

>Lack of ass-kissing of self-proclaimed masters of the
> radio universe (ham radio division) guaranteed!

Makes it kinda hard to look yourself in the mirror to shave, doesn't it, Oh Lying One?

>Go thee to Google, grasshopper, you have much to learn
> and atone for thy attempts at character assassination.

You mean like your assertions of "dishonesty" of the ARRL and failure to produce any evidence thereof?

You mean like your assertion of radio services created for "solely recreational" applications?

You mean like your assertion of intent to get "an extra lite outh of the box"...?

You mean like your embellishment of your Army "career" based upon your service in a unit that suffered KIA's 3 years before you joined it?

There's more...do I need ot go on...?!?!

>Leonard H. Anderson
> - alleged anonymous person using screen names
> "LenOf21," "AveryFineman," and a couple others
> on AOL, an alleged heinous "crime."

Nope...no heinous crime. Just very humbling to see a person of your years and alleged professional accomplishments stooping to hide his misdeeds behind multiple personalities.

"Loser" is an understatement.

>"Payroll signature" is a common term for first name, middle
> initial, last name as required in the US military to sign for a
> monthly pay. Those who've never served in the US military
> will be unfamiliar with the term.

It's not been "monthly" in decades, Lennie. And I know a great many non-prior service persons who refer to their legal signature as "payroll signature". Many nurses have their "chart signature" which they use to clearly denote who made the entry. This is as opposed to their "payroll signature" which is used for other purposes.

Sorry to bust yet another LennieRant.

Steve

Yeah, yeah. Big deal.
I, too, humped the boonies as an E-5 squad leader.
Camp Evans, Firebase Eagle. 101st Airborne, Master Blaster.
1st Brigade, 5th Div.
CIB, Purple Heart (shrapnel)
My days in the military are NOT one of my high points. I do not wear my
service on my sleeve.
Except for an occasional bout of jungle rot between my toes I have put this
behind me.
You should do the same, bro.

Not true. All the battalions of nocodes out there who are smugly
sitting on their dead butts counting the days until S25.5 goes away so
that they can get free passes to 75 & 20 ssb are gonna be HUGELY
pissed off if that doesn't happen(Jim: e.g. our beloved ATO). You bet
S25.5 is still a major issue. It's no longer a major issue in this
isolated funny farm full of odd units but only because we've
collectively worn it out and beaten it into the ground.

> > I'll be surprised if it takes any more
> > agenda time than the minimum required to propose elimination of S25.5

There are some former Soviet entities in eastern Europe which now have
the same clout at WRCs as Foggy Bottom has and the little bit of
traffic on the subject I've seen so far indicates that they very well
could be yer "ringers".

We all do. It's developing into an interesting joust to say the least.
I noticed that none of the options offered for discussion at the WRC
so far include any mention of opening up 6.900 - 7.000 Mhz for ham
ops. I thought that was an excellent idea when I first heard about it.

Like Doris Day sang, "Que sara, sara".

We'll deal with it. We always have dealt with it. No matter what.

>Where did you get that idea?

From your own quotes, Brian. You should try reading them some times. Very funny stuff!

Follow this...

First you say:

>Who says it wasn't voluntary??? I didn't say that? And I didn't say
>I declined further service.

Then only three sentences later:

>It was offered, I declined.

You are as confused and idiotic as can be, Brain. And it get's more hillarious as you try to deny it. Kinda like insisting how "legal" your T5 operations were, and NOT having any evidence of it.

>You can have a second try if you wish. Really. I'm up to it.

It doesn't take more than one pass to undermine your rants, Brian. It's very simple, really.

>Got a picture of it
>somewhere, but I'm just a has-been now and don't live in the past.

Yes, you are, but you DO still try to live in the past, Brian.

>Someday when you go SK, someone is likely to see those wings
>in your collection and try to bury you in Arlington.

Nope...Anyone who is anyone knows it's what's in your SRB that counts. Anyone except you, that is.

>ops. I thought that was an excellent idea when I first heard about it.

Apparently moving the folks there was seen as much more of a no-go than moving SWBC out of 7100 and above.

Perhaps the deal will go like this: The Eastern bloc folks trade 40 SWBC for the code test. Or some permutation. Won't know for sure until the fat lady sings.
>
>Like Doris Day sang, "Que sara, sara".
>
>We'll deal with it. We always have dealt with it. No matter what.

The facts are that all regulations and requirements MUST
be justified. The court of public opinion and technical
need as determined by the FCC has negated any reasons
to retain code testing. That's all that needs be said.

To RETAIN morse testing, the burden of proof falls on
those that WANT a test. It's that simple.

Cheers,
Bill K2UNK

How
> can ignorance of things like how a DDS synthesizer works result in
interference
> with other services?

Not knowing how a DDS works could result in programming it incorrectly,
causing out of band emissions.

Not knowing (fill in some technical thing here) could also result in the ham
having no clue that his radio was malfunctioning and creating interference
(let alone how to fix it ...)

> >get you killed when you do stupid things with
> >your fingers inside a radio

In some states mechanics are licensed ... which shows the recognition of
the danger ... electricians are pretty universally licensed, as are
plumbers,
and other craftsmen whose work could, if poorly done, endanger the public.

> >expose your family/neighbors/passersby to RF
> >radiation above the established limits
>
> Said limits are part of the rules & regs, and covered as above.

Yes, but if you are so technically ignorant (as you seem to be
advocating, at least as devil's advocate in an effort to prop up
the "equal legitimacy" of Morse testing) that you can't understand
those rules and apply them, having memorized them is useless.

> >etc., etc.
> >
> What "etc., etc."? Why is a Morse test "hoop jumping", but not the
writtens
> beyond the Tech?

Because of what we're allowed to do in terms of repairing, modifying,
adjusting, tinkering with, and even building our own equipment. We
are the only radio service (other than the Experimental Radio Service
under Part 5, which is limited to very specific uses) that allows such
flexibility ... in return, we owe an obligation to demonstrate at least a
minimum level of technical understanding and competence.

> >> >I recognize that those who want to keep Morse testing have a right to

> And they force that opinion on everyone.

Clearly the FCC's rules apply to everyone ... what WE were talking about
is whether NCI would force its views on everyone, as would many PCTAs.

> And consider this:
>
> The FCC is the expert agency charged with managing the non-federal-govt.
use of
> the radio spectrum that belongs to all of us.

I said previous sentence ... you said the following:

> They say that the 35 question
> Tech test is adequate indication of qualification to design, build, test,
> align, repair and operate amateur transmitters up to 1500 watt output on
all
> authorized amateur frequencies and modes above 30 MHz.

I disagree with that part ... and have stated so on many occasions.
As an RF engineer by profession, I do not personally believe that the
current Tech written tests are adequate to justify authorizing the use of
1500W output transmitters, with unlimited antenna gain, at frequencies
that are commonly used to cook food and frequencies with similar
potential dangers at adequate field strengths.

>As part of the
> restructuring that reduced all code testing to a single 5 wpm test, FCC
also
> reduced the written testing for the Tech from two separate tests totalling
65
> questions to the current single 35 question test.

When I got my Tech license, the written was the same as the General.
The current test has fewer questions than the parts before it, in
recognition
that the Tech was intended to be an entry level license.

Nobody ever bitched that the old Novice test was "too easy" ... everyone
knew that its purpose was to get folks on the air so they could learn more
and get socialized a bit ...

Again, I don't think the current Tech test is adequate to convey full power privs, but I do think it's OK for an entry level license. The fix would be to try to get the FCC to reduce the power limit for techs to something more reasonable (I would suspect that the VAST majority of techs don't run legal limit, but rather 25-50W or less, with a few having "bricks" cable of around 100W ...)

> Therefore, by your own logic, the current 35 question Tech test is adequate to
> insure that those who pass it have adequate technical knowledge to:
>
> - avoid interference to other services
> - avoid getting killed when they do stupid things with their fingers inside a
> radio
> - avoid exposing their your family/neighbors/passersby to RF radiation above
> the established limits
> - etc., etc.
>
> The FCC *is* the expert agency, right? And despite lots of comments about how
> to "improve" the written tests, FCC decided that the current written testing
> for Tech is adequate for the privileges.

I have elaborated my view that the tech test is inadequate for 1500W, but that otherwise it's OK.

> So if the Tech test is adequate for all of VHF/UHF, why is there so much more
> written testing for HF/MF? Surely there needs to be a little more testing for
> the additional rules and regs (band edges, modes, etc.), but why all that
> additional theory stuff on the General and Extra written? Is a QRP transmitter
> for 21.020 MHz that much different than a 1500 W transmitter for 432.020 MHz
> that two more written tests are required to use the QRP rig?

Setting aside the question of actual danger (electrical and RF) that can be involved
in high power transmitters (and particularly at frequencies that cook meat), there
is still a difference ... HF normally propagates internationally far more readily and
commonly than VHF/UHF ... and a higher percentage of HF folks run "legal limit"
(and then some) than do VHF/UHF folks. Thus the potential for interference is
more limited at VHF/UHF, and tends to be more under control of one administration.

This makes it easier for regulatory agencies to be a bit more lenient and
generous
with VHF/UHF privs than with HF privs.

> Or is it that FCC wants hams to "jump through the hoop" of taking more
written
> tests in order to get more HF privileges?

At least those "hoops" are based on a demonstration of RELEVANT and
important qualifications, rather than one's ability to practice an arcane
method of communications that is more "art form" and "cult religion" than
"necessary" in any reasonable way.
>> >> WHOA - I lost ya there.

new
> hams. The number of US hams has grown by only about 10,000 in all that
time.
> And we have not seen significant technical changes brought about by the
new
> regs.

Prior to the changes, we were slowly losing ground and few were upgrading.

The FCC has not enacted changes in the technical rules that would promote
more advancement ... what we can do is still rather constrained to favor the
use of "legacy" technology at the expense of innovation.

> The biggest change brought about by the 2000 restructuring has been large
> numbers of upgrades by already-licensed hams. That's a good thing, btw.

What it demonstrates that reducing the code requirement allowed 10s of
thousands of otherwise qualified individuals to upgrade ... the in itself
clearly
proves that 13 and 20 wpm Morse tests were an unnecessary and artificial
barrier to entry into the higher classes of license and the additional privs

that
they convey.

> >If I had a buck for every e-mail I've received thanking me for NCI's
> >work, I could HIRE someone to install the towers I plan to put up
> >in the spring, rather than doing the work myself ...
>
> How many? There are about 685,000 US hams - how many of them are NCI
members?

LOTS :-)

> How many have emailed you?

LOTS :-)

> I hope the towers help with your SSB DXCC.

I log on the computer, but chasing DXCC (on any mode, or all) is certainly
not a burning interest ... I wish you would accept me at my word on that and
stop harping on it as if my operating on HF is somehow "wrong."

> I think we both agree that good antennas are preferable to raw power.

Clearly ... and don't get the ideas that all of the antennas will be for HF
...
there will be plenty for VHF/UHF/SHF as well ... I plan to be fully equipped
for all of the satellites and for high speed terrestrial digital networking
when
I am "done" with the antenna farm (I guess if you have enough room, an
antenna
farm is never really done :-)

>Check out K8MN's webpage - he has some nice ones.

Are these commercial kits to buy, or plans to build your own?
The latter is preferable ... do you have the URL handy?

Its really the only real Ham Band left, most No-Coders and CBplussers, will never operate there, why, because most are to Dump to make a Antenna work. Was on 160 last night. Somebody needs to tell all those CW operators that there using a mode thats outdated, and someone forgot to tell them no one uses CW anymore. The band was full of CW

Not at all ... Helsinki is a LOVELY city ... and I've enjoyed my
visits there very much.

>Helsinki was my first posting. I didn't bid on the assignment, I was
sent
> there.

OK, so you got lucky and got a good first assignment. Fair enough.

> I liked it well enough to bid on it again and was reassigned
> there in the nineties for three years. Except for that third
> assignment, I bid on all of the others.

OK, so your standards went down significantly with time ... what
happened?

Did you PO somebody powerful and limit your career options? Or
do you just LIKE backwater places because it's easier to be lazy
and inept in such places?

> Mark it down as just another thing you don't understand. Have you
> figured out what explains your behavior?

Yes ... assuming that you're refering to my behavior towards you,
it's simple ... "Pompus, narrow-minded jerks irritate me>"

> How's the "experimentation" with chasing DX on SSB coming along?

Another fiction of your warped mind, Dave ... I will work DX if I come across it, but I am not "chasing DX" in the sense of having a compulsion to collect wallpaper ... or, worse yet, participate in contests.

And, I have been so busy with important work work and 3 weeks of vacation with my wife's family in Mexico that I haven't even been on HF since Dec. 14th ...

As far as my "experimentation" goes, I'm in the design and simulation phase, but work obligations have limited the amount of time I've been able to devote ... but don't worry yourself... I seriously doubt that you are
technically competent to actually understand it anyway ...

Carl - wk3c

I love it. Someone who can't spell "pompous" quotes himself. I assume
that your view assumes that anyone who doesn't buy into your grand
scheme is pompous and narrow-minded. You've not just used that method
with me.

> > How's the "experimentation" with chasing DX on SSB coming along?

Then take that up with the VEC QPC. The FCC doesn't require
any specific-topic written question subjects anymore.

>Some (not all!) just don't like the idea of having to learn a skill
>specifically for the ham license - particularly since that skill usually
>cannot
>be learned in bits and pieces by reading a book or watching a video.

Neither can Hula-Hoop twirling...but all Must Jump in HF hamming.

>Why is it "jumping through hoops" to learn Morse at 5 wpm (even if someone
>never intends to use the mode), but not "jumping through hoops" to learn all
>the theory and regs necessary to pass the written exams (even though someone
>never intends to use 99% of the privileges allowed by the license)? Seems
>like a double standard.

Okay, mighty morseman Miccolis, present your "plan" on the
"proper testing" to the FCC and VEC QPC. Get going. Time's
a wasting for the future...

While you are at it, think about all the Modes not yet devised
that may be used in that future of US ham radio. You are a
Big Shot in amateur radio, let's hear what they are going to be.

>Since the FCC has determined that the 35 question Tech test is adequate to
>allow Techs to use all authorized amateur bands and modes above 30 MHz, and
>to design/build/adjust/repair/align and operate equipment for those bands and
>modes without further certification, aren't the higher class theory questions
>really a form of "hoop jumping"?

Ah, mighty morseman Miccolis wants a NO-THEORY test!

Not a problem. Just propose that to the FCC along with
Type Acceptance of all transmitting equipments and
enforce it.

>Why is a new Tech allowed to design/build/adjust/repair/align and operate a
>1500 W transmitter on 50.020 CW, (or any other authorized band/mode above 50
>MHz), but if said Tech wants to use a 1.5 watt transmitter on 3.520 MHz CW,
>he/she must take two more written tests totalling 85 questions?

Ooooo! Becoming annoyed? You ask all these questions and don't propose any answers. Is this some kind of "quiz?" :-)

Try THINKING about it instead of visceral-emotional reaction to the Old Rules. The FCC doesn't really care about "knowing any morse" for interference mitigation. This isn't 1934 and hardly any other civil radio service USES morse for any purpose... except the automatic ID transmissions in some radio services.

Lead to any preliminary conclusions? It should. Morse skills just aren't important to licensing in US amateur radio...except to satisfy some ossified minds demanding adherence to old rules of yester-year.

Ooooo! "Minority opinion!" Ooooo!

ARRL membership is LESS than a quarter of all licensed US radio amateurs. A far-smaller Minority than the commenters on NPRM 98-143...yet the FCC has agreed, in the past, with ARRL dictates.

Quod Erat Demonstrandum.

>Quite so, Bill. I agree with you. Problem lies with the PCTAs'
> inability to progress with the times and accept reality.

Let's see....Larry is active with many digital modes as attested to here by third parties. Hans has been very much "pro code" without being "pro test". I am busy with datalink programs for aerial repeaters and am tinkering with EchoLink. Jim Miccolis and others have expressed similar participation in other-than-CW modes and practices.

Hmmmmmm....Then we have an UN-licensed, antagonistic ex radio technician who ACCUSES others, especially those who support code use, with not progressing or accepting reality. Of course this is the SAME unlicensed antagonist whose only claim to ANY radio operation was in a rear area Army relay station in the 1950s, who's membership in he uses to embellish his own military service based on the combat deaths suffered by that unit three years prior to his joining same...

What a creep.

Yes, Lennie...that would be YOU.

Putz..

Well said, Bill!
>
IOW, unless a compelling reason can be shown why a law must exist, that law must be repealed. FCC says that, in their opinion, the only compelling reason for code testing is S25.5.

And it's FCC's opinion what makes da rules!

You don't need to know how to drive stick to get an automobile driver's license here in PA. Nor in any other state I know of. Those who want to drive stick shifts are free to do so. And there are plenty of manual-shift cars on the road today, decades after automatic transmissions were perfected.

>the technical parts of the written test to me ... isn't that what
>you were referring to???

Not all of it. For example, in order to understand the regs that define the 40
meter band as being from 7.000 to 7.300 MHz, you have to understand what a MHz
is, so technical questions on MHz are needed to insure that the regs are
understood.

But the written exams go far beyond that level.
>
>> >not knowing how to copy Morse by ear (all that's

>> with other services?
>
>Not knowing how a DDS works could result in programming it incorrectly,

>causing out of band emissions.

But there is no requirement that hams use DDS, let alone program them. The test does not guarantee that any ham knows how to program a DDS, either.

So the test questions on DDS do nothing to prevent interference to other services. They are in the "hoop" category.
>
>Not knowing (fill in some technical thing here) could also result in the ham
>having no clue that his radio was malfunctioning and creating interference
>(let alone how to fix it ...)

Possibly. But there is no requirement that any ham use a particular technology, let alone a particular rig. The tests provide no assurance whatsoever that any particular ham knows how his/her rig actually works, or when it is not working right.

Even at your level of technical knowledge, can you guarantee that there is no possible malfunction of your ham gear that would go undetected by you?
>
End result is that many if not most of the technical questions fall into the "hoop" category.

>> >get you killed when you do stupid things with

>
>In some states mechanics are licensed ... which shows the recognition of
>the danger ... electricians are pretty universally licensed, as are
>plumbers,
>and other craftsmen whose work could, if poorly done, endanger the public.

But ONLY if those people do work on others' properties. And such licensing is far from universal.

The fact remains that in the vast majority of cases a person does not need a license of any kind to work on his/her own house or car, even though the work may cause a possible hazard to oneself.

In short, licenses do not exist to protect people from their own stupidity.

>
>Because of what we're allowed to do in terms of repairing, modifying,
>adjusting, tinkering with, and even building our own equipment.

FCC disagrees. They say the Tech written is adequate for doing all of those
things to VHF/UHF/microwave ham gear. Is HF/MF ham gear somehow more dangerous
or complex than VHF/UHF ham gear?

>We
>are the only radio service (other than the Experimental Radio Service
>under Part 5, which is limited to very specific uses) that allows such
>flexibility ... in return, we owe an obligation to demonstrate at least a
>minimum level of technical understanding and competence.

Which the Technician test does - according to the FCC. Except for the
HF/MF-specific parts, the rest of the General and Extra writtens falls into the
"hoop" category - by your definition.

>> align, repair and operate amateur transmitters up to 1500 watt output on
>> all
>> authorized amateur frequencies and modes above 30 MHz.
>
>I disagree with that part ... and have stated so on many occasions.

So the FCC is WRONG? But they are "the expert agency charged with managing the
non-federal-govt. use of the radio spectrum that belongs to all of us."!!!

>As an RF engineer by profession, I do not personally believe that the
>current Tech written tests are adequate to justify authorizing the use of
>1500W output transmitters, with unlimited antenna gain, at frequencies
>that are commonly used to cook food and frequencies with similar
>potential dangers at adequate field strengths.

FCC disagrees with you.

And that still leaves many other sunjects in the "hoop" category. Thevenin
equivalents, complex impedance calculations - how does knowing them at the
level required by the tests increase RF safety?
>
>>As part of the
>> restructuring that reduced all code testing to a single 5 wpm test, FCC
>> also
>> reduced the written testing for the Tech from two separate tests totalling
>>65
>> questions to the current single 35 question test.
>
>When I got my Tech license, the written was the same as the General.

Yeah, me too, 1968, Philly FCC office. I was 14.

>The current test has fewer questions than the parts before it, in
>recognition
>that the Tech was intended to be an entry level license.

Doesn't answer the question.
>

>> testing
>> for Tech is adequate for the privileges.
>
>I have elaborated my view that the tech test is inadequate for 1500W, but
>that otherwise it's OK.
>
So all that is needed is to add some RF safety stuff to the Tech, and it's OK,
even by you.

That proves the rest of the writtens contain much "hoop" content.

>> So if the Tech test is adequate for all of VHF/UHF, why is there so much
>>more
>> written testing for HF/MF? Surely there needs to be a little more testing
>>for

>> the additional rules and regs (band edges, modes, etc.), but why all that
>> additional theory stuff on the General and Extra written? Is a QRP
>> transmitter

>> MHz
>> that two more written tests are required to use the QRP rig?
>
>Setting aside the question of actual danger (electrical and RF) that can be
>involved
>in high power transmitters (and particularly at frequencies that cook meat),
>there
>is still a difference ... HF normally propagates internationally far more
>readily and
>commonly than VHF/UHF ... and a higher percentage of HF folks run "legal
>limit"
>(and then some) than do VHF/UHF folks. Thus the potential for interference
>is
>more limited at VHF/UHF, and tends to be more under control of one
>administration.
>This makes it easier for regulatory agencies to be a bit more lenient and
>generous
>with VHF/UHF privs than with HF privs.

I disagree! Most of the services that involve safety-of-life comms (police, fire, air traffic control, marine VHF, to name just a few) are at VHF/UHF, not HF. The danger of causing serious loss-of-life or property damage today is far greater at VHF-UHF than HF-MF.

>> Or is it that FCC wants hams to "jump through the hoop" of taking more
>> written
>> tests in order to get more HF privileges?
>
>At least those "hoops" are based on a demonstration of RELEVANT and
>important qualifications,

So you agree that they ARE "hoops" and not necessary requirements!

What it really comes down to is that you use phrases like "force", "hazing ritual" and "jumping through hoops" selectively.

You think it's OK to force new hams to take lots of written tests on technical material that is in no way necessary for the safe and legal operation of a modern amateur radio station, yet you find even a 5 wpm code test to be unacceptable.

>rather than one's ability to practice an arcane
>method of communications that is more "art form" and "cult religion" than
>"necessary" in any reasonable way.

More put-downs and loaded phraseology. Why not just say "there's no reason for Morse to have it's own stand-alone pass-fail test anymore?"

If you need a comparison, just use the stick-shift driving analogy.

Try listening to the non-phone parts of the HF ham bands with an adequate receiver, and see how much Morse is actually in use by hams today. Hardly "arcane" or "cult". Hams use that mode by choice, not requirement.

>>> >> WHOA - I lost ya there.

>>new regs.
>
>Prior to the changes, we were slowly losing ground and few were upgrading.

Losing ground? Check out AH0A's numbers for the two years prior to restructuring.

Since restructuring, we have only gained about 10,000. That's 1.4% in three years.

Is it really all about the numbers, then?
>
>The FCC has not enacted changes in the technical rules that would promote
>more advancement ...

They dumped many of the SS restrictions. Some of us petitioned for the Novice bands to be reused as developmental subbands instead of just more analog phone space. FCC hasn't ruled on that one yet.

What changes to the rules would YOU have the FCC do? How would such changes "promote more advancement", particularly considering that most US hams today use manufactured gear?

>what we can do is still rather constrained to favor the
>use of "legacy" technology at the expense of innovation.
>
Like what? SSB? It's a legacy from the 80 years ago.

>> The biggest change brought about by the 2000 restructuring has been large
>> numbers of upgrades by already-licensed hams. That's a good thing, btw.

>Okay, mighty morseman Miccolis, present your "plan" on the
> "proper testing" to the FCC and VEC QPC. Get going. Time's
> a wasting for the future...

Speaking of which...where was your submission to the FCC to accomodate
GROL/EE holders without further testing?

Had you acted on this five years ago, you might be licensed today
(unlikely, but mopre probable than the way it's going.)

A simple NPRM might have added one more element to FCC testing...A test on
Amateur practices and regulations only...no theory...for anyone presenting a
valid GROL.

It cudda been yours, Lennie...Ya cudda been a hero...Instead, you're still
just a zero.

>While you are at it, think about all the Modes not yet devised
> that may be used in that future of US ham radio. You are a
> Big Shot in amateur radio, let's hear what they are going to be.

Wonder if Marconi could envision all the modes we have today? Who today
can envision them for another 50 years from now?

>>Since the FCC has determined that the 35 question Tech test is adequate to
>>allow Techs to use all authorized amateur bands and modes above 30 MHz, and
>>to design/build/adjust/repair/align and operate equipment for those bands
>and

>I attempted to start the club. This shows I am willing to put the effort in.

The clubs are not now in existence. Obviously not ENOUGH effort was put
into it, otherwise the "clubs" would be operating now.

>>>Translation: IF someone else does all the formative work, then
>>>maybe I'll join and help.
>
>No, I would lead any such projects if there were any interest. Problem is, I
>making my pitches to Hams at clubs, so I'm making my pitch to those that are
>probably not interested.

Then you need to take your pitch to forums where they would most likely be
favorably received. When I try to recruit for Civil Air Patrol, I don't put
ad's in "Cat Fancy" , nor do I ask to speak to the Ladies Bridge Club. I go
where I know I am most likely to find folks interested in Aviation, SAR or
Disaster Relief.

You are not thinking this through. You struck a match a couple times, and
when the flame blew out, you just quit.

Your bust...Not ours.

Steve, K4YZ

>Nope. In fact, I think the written tests are not well-matched to the
privileges
>granted.

The incentive system is backwards, but its too late to change it now.

>Why is a new Tech allowed to design/build/adjust/repair/align and operate a
>1500 W transmitter on 50.020 CW, (or any other authorized band/mode above 50
>MHz), but if said Tech wants to use a 1.5 watt transmitter on 3.520 MHz CW,
>he/she must take two more written tests totalling 85 questions?

The only fair solution now is to eliminate the code test. The important thing
is to have RELAVANCE. Tying the code to the General class forces non-relavance
to the licence class. You seem to agree with this.

>Why did I have to
>learn about UHF/VHF, transistors, SSB, FM, and a variety of other
>things just so I could work Morse on 7010?

Sounds like an only-coder!

I used a computer program that you can type in questions and it will respond
"appropriately". WA8ULX has a limited number of phrases, and his responses are
so predictable. Also, he offers no evidence, just uses one of these phrases.
One must wonder if WA8ULX is just a computer program.

Yes, I declined to go to jump school, yet my service continued. How
can that be if I declined further service? How could I decline if it
were involuntary?

Oh, the possiblities!

Perhaps I served under protest? Yeh, that's it. I got a concentious
ojector status to jump school.

Only your imagination knows.

So, your second pass at it failed. No suprise. At this point I would
say you are a moron.

Would you like to try for moron squared? I think you're capable. Go
for it.

> very simple, really.

No rant here. But you do get awfully wrapped around the axle on
things you have little understanding of - such as words.

> >Got a picture of it
> >somewhere, but I'm just a has-been now and don't live in the past.
>
> Yes, you are, but you DO still try to live in the past, Brian.
>

>for the Foreign Service, huh?

Tell us more about the Great and Vast communications networks
you managed. I especially liked the elevation of Guinea-Bisseau
to an "important, strategic" location, vital to US interests. Oh, my!

The "using CW (manual keying) as an order-wire to synchronize
schedules of a single-channel RTTY circuit" as an original idea
was masterful in the 1980s. Nobody else had bothered to do that.
Of course, you changed the tune later when pressed on it, saying
it "was State Department protocol/procedures" and thus disavowing
the originality. Didn't make sense some years ago in here and
still doesn't.

If one "can't get through" with modern RTTY equipment and has to
resort to OOK CW to "set schedules," how in the world can any
traffic be passed via TTY when it is required? If "conditions were so
bad," then it should not have been a TTY circuit at all, instead being
an OOK CW circuit.

If there is an RTTY radio circuit, then one uses TTY to send
scheduling information changed from printed information sent to
both ends. That's common sense. That's the way things have
been done since before WW2 on RTTY circuits worldwide by
the rest of the radio world.

Awwww. Don't like your own kind of commentary coming right back
to you? Tsk, tsk, tsk.

Oh...I forgot. You were in the Foreign Service! Something extra-
super-special...a small group of communicators in a much larger
(much, much larger) radio world...and you were attempting a grande
Snow Job on everyone else and expecting them to buy it.

>> > How's the "experimentation" with chasing DX on SSB coming along?

>
>Oh, excuse me. In one of your past incarnations here you were regaling
>us with tales of your DXploits on SSB.

Try living in the PRESENT, Mr. FSO. Demands to go back to Google
archives to "prove" some sort of point is very dangerous. All others
can see examples there of hypocrisy, snow jobbing, and other
assorted perfidy you wrote in here. You DON'T want to go there.

Carl lived in Mexico for a time, had a Mexican amateur radio license
and operated with that? That's not "arrogance" or anything else
but a statement of facts. Certainly not "regaling" anyone...such as
the "CW as an order-wire on an RTTY circuit" from Guinea-Bisseau.
Harf! :-)

>> And, I have been so busy with important work work and 3 weeks

>
>Pompous, narrow-minded jerks irritate me. Did I mention your arrogance?

Poor baby.

I think that past examples of "radio expertise" have demonstrated the
"competence." I really like the "CW used as an order-wire on RTTY"
claimed from the US embassy at a country whose chief export is
cashew nuts. Says a lot right there. :-)

>S25.5 is still a major issue.

Not quite, senior. ALL of S25 is up for rewrite. You may see exactly how in Items 1.7.1, 1.7.2, 1.7.3 at the WRC page, International Bureau, FCC website. Informal Working Group 6 (IWG-6) has the nitty-gritty of regular meeting minutes...finally...much late in write-up but completed.

Actually, amateur radio matters are a very small item in the totality of what will be discussed at WRC-03. It will be surprising if the WRC manages to get anything discussed on such things.

>It's no longer a major issue in this
>isolated funny farm full of odd units but only because we've
>collectively worn it out and beaten it into the ground.

No again. The PCTAs have been worn out and beaten to the ground. They don't have any valid arguments whatsoever to keep the code test...all they have are many and varied personal insults leveled at NCTAs. Tsk, tsk, tsk.

>> > I'll be surprised if it takes any more

Ah! The "insider" at WRCs and WARCs who "knows" what
happens there and "who has clout." :-)

Kellie's "estimation-opinion" has as much validity as his
expertise with numbers...like swelling a single patent (as co-
inventor) in twenty-six! :-)

If Kellie's opinion were true, then such "ringers" can equally
apply to every other Recommendation about amateur radio.

>> > 40 meters is actually a much more important issue for HF amateur

>so far include any mention of opening up 6.900 - 7.000 Mhz for ham
>ops. I thought that was an excellent idea when I first heard about it.

Kellie just found out about that?!?!? Good grief, it's been
a topic of discussion for years, before WRC-99!

Kellie had better get up to speed and with the program.

>Like Doris Day sang, "Que sara, sara".

Senior, there are few fans of 30+ year old movies starring
Doris Day. She doesn't have a ham license. Neither did
Jimmy Stewart (as far as I know) and he was talking on
radio from airplanes well before Kellie knew what a beep was.
:-)

>We'll deal with it. We always have dealt with it. No matter what.

>
>Why are the writtens a sacred cow but the code a scapegoat?

The FCC requires ALL US radio amateurs to be responsible for the
technical and legal requirements of amateurs' operation. All.
No exceptions.

The FCC does NOT require any US amateur to operate OOK CW
over and above any other mode. All modes are optional within
allocated bands.

Ergo, there is NO justification for any morse code test other than
a politically-biased (in favor of morsemen) recommendation.

A morse code test is thus little more than a hazing ritual demanded
by some long-time amateur morsemen to make all newcomers
jump through the same hoops they had to long ago.

hey i have seen the black helocopters.....the army does this thing
around here where they practice insertions in urban areas, like they
are fighting in a urban setting.....makes me
nervous.....sometimes they try and take over a town, exploding
ordinance , etc.....you watch my words,....one day they will use
that stuff on you and me.....people need to keep
alert.....freedom isn't just a word.....

IIRC they were power lines with a "Danger High Voltage" strip on the
crossarm....but it's been a long time since I've seen that film.

And the "location" was 'sposed to be a small rural village in
Mexico, where LADWP-type facilities were not very common...

> thousands of otherwise qualified individuals to upgrade ...

Otherwise qualified? Perhaps

What really happened is that many hams found themselves able to
upgrade with only a little more testing, or none at all. For example,
a pre-1987 Tech Plus could get a General with no more testing at all.
That same person could jump all the way to Extra with just a single 50
question written, rather than the two writtens and 20 wpm code test
formerly required.

> in itself
> clearly
> proves that 13 and 20 wpm Morse tests were an unnecessary and artificial
> barrier to entry into the higher classes of license and the additional privs
> that
> they convey.

How does the fact of existing hams taking advantage of easier upgrades
prove anyhting of the sort? By that logic, the old Advanced test was
an unnecessary and artificial barrier.

Lower the price of anything, and you will see a surge in purchases.
Supply and demand.

There are folks out there petitioning FCC to grant Extras to anyone
who can show they held a General or Advanced prior to November 22,
1968. Their argument is that since they once had full privs, they
should have 'em again, with no additional testing. Or some such. I
don't buy that argument at all, but if enacted, we'd see a surge of
new Extras.

In other words, not that many, because you'd tell us the number if it
were significant. I've never seen an NCI membership number over 4000,
and since you folks started at 1000, the total membership mus not be
more than 3000 - worldwide. Hardly a majority!

Must not have 100 yet, then... ;-)

> I wish you would accept me at my word on that and
> stop harping on it as if my operating on HF is somehow "wrong."

I do accept that it's not a burning interest of yours. And there is
nothing morally or legally "wrong" with any licensed amateur
participating in DX, award hunting, or any other amateur activity as
long as it is done legally and in accord with good amateur operating
practices.

However, it *is* somewhat surreal (as dear departed N0BK would say) to
read your description of working 70+ countries on HF. Particularly
when it developed that they were worked on SSB using a manufactured
transceiver.

After reading many, many posts about "better methods and modulations"
for amateurs, the need to experiment and become technological leaders
instead of appliance operators, and more posts decrying "electronic
paintball wars" and the "elitism" of short vanity calls, one would
naturally expect that the writer of those diatribes to be engaged in
something other than busting pileups on the way to the magic 100.

Source record: 60090

At the risk of bringing this back on topic, I downloaded the Echolink software, and installed and got it running yesterday. After all, I souldn't condemm it if I hadn't used it, yaknow?

Installation was pretty straightforward. Setup was accomplished by opening up some ports on my router, and the next morning I was signed in.

Then it all goes down because of the internet attack. In fact the ARES net for this evening was canceled.

Not an auspicious start, I must say.

Now there's a new twist...so now it isn't enough that morse use simply
survive to make Larry happy, but rather it must survive at "it's
former level (whatever that means) for Larry to be satisfied.

Cheers,
Bill K2UNK

> about med school, I'm otherwise qualified to do heart surgery.

Right ... and so is my Rotweiller ... your point is?

As long as people can pass the prescribed written tests, they are,
by definition "otherwise qualified," with the exception of the remaining
5 wpm Morse test, to operate on HF.

> The only
> thing holding me back is that I'm not going to jump through their hoops.

I think it would be more accurate to say that the only thing holding you
back is a lack of the requisite intelligence and skill ... and that little
thing
called passing the tests and getting the license.

I have NEVER advocated that anyone should operate a radio without
the prescribed license .. I would CERTAINLY recommend that you
refrain from doing heart surgery ... I don't care if you get tossed into
the can for practicing medicing without a license ... it's the potential

victims that I'm thinking of.

> understood.

OK ... I'll go along with that ...

> But the written exams go far beyond that level.

Sure ... because to prevent interference to other services, one needs to
know
more than "1 MHz = 1,000,000 cycles/sec and and the band edges are X to Y"

> >> >not knowing some of the technical
> >> >aspects can:
> >> >
> >> >result in interference to other services
> >>

> >> How? The rules and regs cover things like allowed frequencies and
modes.

They also cover things like signal purity, modulation, out of band
emissions, and many more things that require a certain level of
technical knowledge to understand and comply with to a reasonable
level of surety.

> >> How
> >> can ignorance of things like how a DDS synthesizer works result in

> >Not knowing how a DDS works could result in programming it incorrectly,
> >causing out of band emissions.
>
> But there is no requirement that hams use DDS, let alone program them. The
test
> does not guarantee that any ham knows how to program a DDS, either.

But we are ALLOWED to use them (and they are becoming more popular
because of the significant advantages they can provide over old-fashioned
VFOs) ... it is clearly necessary to understand the basics of how a DDS
works
to understand the principles necessary to correctly program it to operate on
a certain frequency (and/or to figure out why it's not working right) ...

> So the test questions on DDS do nothing to prevent interference to other
> services. They are in the "hoop" category.

No ... as I've explained above, they are not in the "hoop" category ...
they are legitimate questions on technical qualifications ...

> >Not knowing (fill in some technical thing here) could also result in the
ham

technology,
> let alone a particular rig. The tests provide no assurance whatsoever that
any
> particular ham knows how his/her rig actually works, or when it is not
working
> right.

All of the rigs available today work on rather well-established principles
that should be (at least reasonably) understood by those who use them.
Heck ... when I took my novice test, there were questions about how
oscillators worked ...

> Even at your level of technical knowledge, can you guarantee that there is
no

> possible malfunction of your ham gear that would go undetected by you?

Nothing in live is 100% ... except death (some cheat on their taxes, but
the grim reaper eventually will get us all :-)

However, the probability that I would recognize a malfunction (or understand
the implications of a bad signal report, etc.) are higher because I was
required
to demonstrate at least a reasonable level of technical knowledge through
the
written tests.

Besides, I have test equipment that many hams don't have and check my
gear on a pretty regular basis as preventative maintenance ...

> End result is that many if not most of the technical questions fall into
the
> "hoop" category.

I'm beginning to think that Hans' question as to whether you were
laying the ground work for NTI (No Test International) may have
been on the mark :-) WHY are you so intent on eliminating all of
the technical content?

And why are not all the "dumbing downers" not coming out of the
woodwork to flame the hell out of you? (I guess it's ok to dumb
down the technical part, but Morse is sacred, right???)

> >> Why is a Morse test "hoop jumping", but not the
> >> writtens beyond the Tech?
> >

>
> Which the Technician test does - according to the FCC. Except for the
> HF/MF-specific parts, the rest of the General and Extra writtens falls
into the
> "hoop" category - by your definition.

As I stated in another message, my *personal view* (based on my
professional experience) is that the Tech test does not justify 1500W

privs ... and that the VAST majority of Techs would probably not
care if they were limited to the sorts of powers that most commercial
2m and 440 rigs put out ... say 50ish watts ...

I think the General test should be good for, say 250w ... and that
1500W should be limited to Extras (not that I have any plans of
running that power, in fact, I wouldn't care if Extras were limited
to 500w ... or even 250W) ... as I've said, there's much more
"bang for the buck" in better antennas and better modulation/coding
than in brute force power
(if more hams were more technically knowledgable,
they'd know that and there'd be a lot less cross-town rag chewing
with full legal limit in violation of the minimum power rule ...)

Now, I realize that there are old time Generals who will give up
their linears when they are pried from their cold, dead hands ...
there is an implemenation problem here, in the sense of "taking
away" something from some ... so, while I don't think the FCC
would implement these power limits, I think they *should* ...

> So the FCC is WRONG? But they are "the expert agency charged
> with managing the non-federal-govt. use of the radio spectrum that
> belongs to all of us."!!!

As above, nothing is 100% ... I disagree with the FCC on the power
limits vs. technical knowledge required ... but that is a vestige of
the past that they are sort of politically stuck with ... you know the
history of how some old timers lost privs (and some are still bitching
about it 50 years later ...)

> >> Or is it that FCC wants hams to "jump through the hoop" of taking more
> >> written
> >> tests in order to get more HF privileges?
> >
> >At least those "hoops" are based on a demonstration of RELEVANT and
> >important qualifications,
>
> So you agree that they ARE "hoops" and not necessary requirements!

NO ... I made the mistake of trying to stay consistent with your
terminology ... I do NOT believe that the technical content in
the written tests are irrelevant "hoops to be jumped through ... that's
why I use the phrase "based on a demonstration of RELEVANT and
important qualifications" ... you're smart enough to know what I
meant, so please stop playing word games ...

> Is it really all about the numbers, then?

No ... it's about REASONABLE, RELEVANT QUALIFICATIONS.

73,

> from the important work for three weeks in Mexico?

1) Even *I* get to take a vacation once in a while ... though this was the
first in 2 years ...
2) It was the first time in the 10 years we've been together that my wife
and I have been able to spend Christmas with her family ... I owed it to
her ... we'd planned to do it a couple of other years, but something always
came up.
3) Since most of my work these days is dealing with regulatory agencies,
and most governments sort of shut down over the holiday season, it was

easier to get away then than at other times

(not that I have to justify my vacations to you ...)

Tsk, tsk, tsk. You haven't "won" any argument. It isn't "about
DDS" per se but any question on FREQUENCY CONTROL.

A single-crystal oscillator can make trouble just as easily as
a PLL or DDS or Fractional-N synthesizer and produce RF
outside of ham bands. US amateurs are not allowed to RF
outside their alloted bands.

>Possibly. But there is no requirement that any ham use a particular
technology,
>let alone a particular rig. The tests provide no assurance whatsoever that any
>particular ham knows how his/her rig actually works, or when it is not working

Every single US amateur radio licensee is DIRECTLY RESPONSIBLE
for their equipment. It doesn't matter what it is, they are still
DIRECTLY RESPONSIBLE.

Try going with that for a change instead of resorting to reducto ad
absurdum "examples."

>The fact remains that in the vast majority of cases a person does not need a
>license of any kind to work on his/her own house or car, even though the work
>may cause a possible hazard to oneself.
>
>In short, licenses do not exist to protect people from their own stupidity.

Not quite correct. Licenses seem to exist as Mighty Monuments to
the Fantastic Achievements of The Licensee from THE TEST!!!

There are many with that overt attitude in here. Stupid. None of the
FCC operator license tests have any academic validity. The FCC is
not chartered as an academic organization. Never was.

>>> What "etc., etc."? Why is a Morse test "hoop jumping", but not the
>>> writtens beyond the Tech?
>>
>>Because of what we're allowed to do in terms of repairing, modifying,
>>adjusting, tinkering with, and even building our own equipment.
>
>FCC disagrees. They say the Tech written is adequate for doing all of those
>things to VHF/UHF/microwave ham gear. Is HF/MF ham gear somehow more
>dangerous or complex than VHF/UHF ham gear?

Ahem. Morsemanship has NOTHING to do with ANY kind of
technical smarts. None. Zip. Nada.

You SHOULD know that the morse test for amateur licenses
below 30 MHz is a POLITICAL thing. POLITICAL. Has nothing
to do with technical anything.

Bad form, OM. You are scrabbling on more minutae in a classic
reducto ad absurdum counter which is totally invalid.

>Which the Technician test does - according to the FCC. Except for the
>HF/MF-specific parts, the rest of the General and Extra writtens falls into
>the "hoop" category - by your definition.

No, no, no. You cannot RE-define things already defined...you are
NOT the Final Arbiter of that.

Try staying with the program and the very distinct difference between
technical and legal subjects and a purely ear-mind cognition skill
that involves absolutely NO theory whatsoever.

>How could anyone "force" their views on anyone else, other than to have those
>views enacted into the rules? FCC does the forcing.

:-) Sure looks like Andy...oops, I mean Jimmie spends much time
in here trying to FORCE his old ideas into everyone. :-)

>So the FCC is WRONG? But they are "the expert agency charged with managing
>the non-federal-govt. use of the radio spectrum that belongs to all of us."!!!

Stuff it, Jimmie. Quit trying to put words on someone else's messages
that weren't written by others.

>And that still leaves many other sunjects in the "hoop" category. Thevenin
>equivalents, complex impedance calculations - how does knowing them at the
>level required by the tests increase RF safety?

Jimmie, you sure building up to modern amateur radio NO-THEORY
TESTING! ! !

Now tell us...did you REALLY communicate with the VEC QPC or have
you been funnin' us?

>Yeah, me too, 1968, Philly FCC office. I was 14.

You were LATE. Other kids did it at 6! You could have done it
in 1960 and had 8 more years to brag about! Tsk, tsk, tsk.

>That proves the rest of the writtens contain much "hoop" content.

Proves NOTHING of the kind, goombah.

As has been said, quit trying to be the legal-technical moderator
of what others have written which are readily understood by
others. Tsk, tsk, tsk.

>So you agree that they ARE "hoops" and not necessary requirements!

No, he does NOT!!!

>What it really comes down to is that you use phrases like "force", "hazing
>ritual" and "jumping through hoops" selectively.

...there you go again, putting words in others' writings. BAD form, OM.

>You think it's OK to force new hams to take lots of written tests on
>technical
>material that is in no way necessary for the safe and legal operation of a
>modern amateur radio station, yet you find even a 5 wpm code test to be
>unacceptable.

You think it is OK to force morse code down everyone whether
it is not justifiable. No problem, Jimmie. We all know what you
are trying to do here...

>More put-downs and loaded phraseology. Why not just say "there's no reason for
>Morse to have it's own stand-alone pass-fail test anymore?"

...damn! There you go AGAIN trying to act the editor! You are NOT
one of those, don't have the authority.

>If you need a comparison, just use the stick-shift driving analogy.

If you need a used car with a stick shift I can put you in touch
with some salesmen. Otherwise, may we suggest you take
that stick and "shift" it someplace? :-)

>Try listening to the non-phone parts of the HF ham bands with an adequate
>receiver, and see how much Morse is actually in use by hams today. Hardly
>"arcane" or "cult". Hams use that mode by choice, not requirement.

Try opening your mind to "listen" to others that don't believe in
your little morse-ist cult following.

You think you have a hammer. If that's all you have then
everything looks like a nail to you. Others don't have that
viewpoint.

>Like what? SSB? It's a legacy from the 80 years ago.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!

At best, Jimmie, FIFTY years ago. The 1950s. For amateur radio, that is...

It was the commercial and military people who pioneered SSB beginning in the 1930s, based on landline frequency-division multiplex "carrier" systems of 15 years earlier.

If less than ten amateurs "used SSB" in the 1930s, it is an exaggeration of the highest order to suddenly elevate those copiers-of-commercial techniques as "legacy operators."

Bwahahahaha...hehehehehehe...snicker, snicker...

Bad form, OM. It's been a VERY long time since NEVER.

I saw it on first run, then on TV, now we have a DVD of
it. It isn't there, Phil. There's NO evidence of it.

Overruled on acount of trying to use hearsay as evidence.

Tsk, tsk, tsk.

> And the "location" was 'sposed to be a small rural village in
> Mexico, where LADWP-type facilities were not very common...

DWP doesn't service inland Mexico, senior. The details of
shooting that film were in American Cinematographer
magazine long ago. Nothing was mentioned about any
"HV signs" then, there isn't anything to see in the DVD to
prove your point.

Case dismissed.

> the tests are "way easier" today than they were "in the good old days."

That's not too hard to "decipher". I had to bust my weenie adolesecent
butt to teach myself enough "theory" to get thru my Novice & General
exams "back in the good old days". So an engineeering degree and a
half century in ham radio later I can't imagine why the tests today
look so easy to me. WTF . . what a big surprise.

There can be no question that becoming a ham really did require
jumping thru more hoops back then than it does today - written test
content and code tests aside. FCC offices only, no such thing as
CSCEs, screw any of it up and come back in a month and do it *all* of
it over again, the usual.

I can hear the whiners today if the pore things had to do 100 miles
one way to an FCC site just to take a Tech test.

> I don't want to put words in his mouth, but IIRC, my good friend Ed
> Hare, W1RFI, of the ARRL, has stated the ease with which he got
> his general "back when" (as have others).

That completely falls apart given the huge variations in what people
know and their backgrounds going into tests. Any tests which are not
directly related to instruction in the subject. The technically
inclined and more precisely electronics hobbyists will obviously have
a much easier time of it than most others. You bet Minnie the typist
who never had Algebra 1 or physics 1 and could care less will have a
lot more work to do to get past the writtens than those of us who had
the natural aptitudes and were into technical matters well before we
went for our ham licenses. I don't know how far along Ed was on the
academic path to his EE but I'll bet bucks on the fact that he was no
stranger to electronics when he "breezed" thru his General. Minnie
would have a much different view yes? Certainly.

> The written tests aren't an EE final ... never were, never were meant
> to be, never should be.

Could not agree more.

> The issue is that some folks are PO'd that people who already know
> all the radio stuff don't have to work as hard as they did (because they
> didn't know the radio stuff ...

That's stupid on their part.

> hell, many still don't ... I know other
> extras
> who don't have a clue on the technical side.

Hell yeah! But is that necessarily bad? And if yes why?

The last president of the club to which I belong is the recently
retired head of the department of opthalmology at one of the big-name
med schools. Another former prez is an EE who was a VP at General
Electric before he took a buyout. Neither of 'em could design a piece
of solid state ham equipment if their lives depended on it. Neither
can I. For instance.

But then grease yer paddles and join those two in the ARRL CW dx bash
a few weeks from now out where the rubber actually hits road on the
airwaves. Normally they'll have logged another "DXCC" between 00 GMT
Friday evening and noon EST Sunday if not sooner. I understand you're
still working on your first, keep slugging and best of luck with it
Carl.

Then of course comes the current Prez who is a Postal Service truck
mechanic and the band-cleaning shop vac from hell . . . I'm sure you
get my drift eh?

What yardstick do you use to quantify cluelessness? And why?

> The point is that that the reason for licensing (and the tests) is NOT to

> lies).

That's SOP human behavior, it's all about pecking orders. On the
job,in the hobbies, it's everywhere and it started when our
predecessors decided that living on the ground was a better idea than
living in trees. Fuggem all, I ignore it.

Your apology will come only after you submit proof that you are not an
American. I'm not going to do your leg work for you.

It is amazing just how quickly you snipped all the stuff referencing Key
Officer listings and got the hell off that subject before revealing any
more of your ignorance. You're quite the tap dancer.

> (much, much larger) radio world...and you were attempting a grande
> Snow Job on everyone else and expecting them to buy it.

Here's the part where you prove N2EY's point. You give hell to others
over being radio amateurs and not understanding what is going on the the
rest of the radio world. When one of those radio amateurs has
experience in military, government and the broadcast industry, you
attempt to belittle those experiences.

> >> > How's the "experimentation" with chasing DX on SSB coming along?

The what Foreign Service? Exhausted? Oh--maybe you meant "exalted"
How'd you manage to think I have grudge against "those who still work
for non-government corporations". Does that indicate that I give
retirees a pass
or that I believe only in government corporations? It is probably that
I don't care for a guy who describes how important his work is.

> You aren't "B.A. Barracus" of any "A Team," Mr. FSO. Quit
> trying to imitate that character.

I'd have to know the character in order to imitate. I don't know the
character.

> >tests ... many are Extras, or other countries' equivalents thereof.
>
> QSL. Oooops, in your case, I guess I should say, "10-4, good buddy!"

Actually, "Yes, I know" is a more appropriate response in text
modes such as this, or in voice. (The common use of "Roger" being
incorrect, as "Roger" simply means "I received your transmission"
NOT "Yes," "affirmative," "I agree," etc.)

And you know into exactly which dark place you can stuff the
attempted CB perjorative :-)

> >And, once again, we do NOT oppose the (voluntary) learning

> toward the Morse/CW mode realize that the USE of this mode will not
> continue at it's former levels unless there *is* a requirement for Morse
> code testing at useful proficiency levels!

SO, you publicly admit that your motivation to force all to learn Morse
in order to pass a test is based SOLELY on your desire for more "recruits"
(willing or not) to the ranks of Morsedom ... in hopes that at least a few
will
stick to using the mode.

Frankly, while I have no desire to see Morse USE dwindle, I don't give
a rat's arse if it does either. Modes should survive on the basis of a
free-
market approach ... if people use them fine, if nobody finds them useful

or attractive enough to pursue, that's fine too. In the REAL world, it's
NOT
religion ... that fantasy only exists in the minds of the rabid PCTA crowd.

> would have a much different view yes? Certainly.

How many bucks??? IIRC, Ed was 13 or 14 when he got his
general. Being a ham is way motivated him to a career in radio
electronics.

>
> Hell yeah! But is that necessarily bad? And if yes why?

Any ham who doesn't meet the intended level of technial
proficiency for his/her license class is a bad thing in my view,
because we are supposed to be a technical service ... read
97.1 again ...

>
> What yardstick do you use to quantify cluelessness? And why?

Cluelessness is relative to the level of proficiency that the license
class expects ... IOW, I would not consider a tech who didn't
understand extra theory completely to be clueless ... he/she is
a beginner and is supposed to be learning, not to know it all.
On the other hand, since I used the phrase "know it all," I should
clarify that I don't expect extras to "know it all" either ... because
there is so much that goes beyond the content of the extra QP that
NOBODY could be expected to know it ALL ...

But too much of ham culture is built around this pecking order (and
attempting at all costs to maintain it) ... that hurts ham radio and I
would like to see it die away with the new generation of hams.

>
>The only fair solution now is to eliminate the code test.

The code test, Vipul, CANNOT be eliminated until the international treaty,
of which the United States is a signatory, has been itself deleted or ammended.

And please note Jim's comments were relative to the WRITTEN tests, NOT the
code test.

>The important thing
>is to have RELAVANCE. Tying the code to the General class forces
>non-relavance
>to the licence class. You seem to agree with this

Yep, and the code test, at present, is VERY relevent, since it is requied
by same said treaty if you seek privileges on frequencies below 30mHz.

BTW, Lennie the Liar Anderson will tell you it's NOT a "treaty", but I
suggest you ignore him and rely on the comments of Mr. Phil Kane in that
regard. Mr Kane is a professional communications lawyer with decades of
practice as opposed to Lennie's barracks lawyering...Not a good place for
reputable information.

>>Why did I have to
>>learn about UHF/VHF, transistors, SSB, FM, and a variety of other
>>things just so I could work Morse on 7010?
>

> to keep the code test...all they have are many and varied
> personal insults leveled at NCTAs

Lennie, YOU are the ONLY one in here ranting about the code test and it's continuuation beyond WRC-03. I don't know of a single one of us who favor Morse Code use OR testing that has not expressed the thought that the test is gone, and time to move on.

YOU, however, have been the only impediment to changing "policy" topics to other AMATEUR RADIO policy matters.

>Tsk, tsk, tsk.

Tsk, tsk, tsk is right. How shameful that you act the way you do when your conduct and foolheartyness is so transparent...and archived so accuarately.

>>There are some former Soviet entities in eastern Europe which now have
>>the same clout at WRCs as Foggy Bottom has and the little bit of
>>traffic on the subject I've seen so far indicates that they very well
>>could be yer "ringers".
>
> Ah! The "insider" at WRCs and WARCs who "knows" what
> happens there and "who has clout."

For anyone who has been following the progress of the issue (which Lennie Anderson obviously has NOT), one knows this to be true. The "position" of former Soviet entities and many African "nations" is dubious. However they have the exact same number of votes as the United States does in these issues...ONE. Cesspools like Yemen, Somalia and Zimbabwe can out vote the United States if they choose to.

>Kellie had better get up to speed and with the program.

Pot/kettle/black. Anderson's awareness and comprehension of Amateur Radio related issues is thin, to say the least.

>Ey, youse wan' anudder hoagie ta munch, tuff guy?

Does it have the same crow YOU are used to eating, Oh Unlicensed Putz?

That's right, the t2fd is an extremely inefficient antenna on most
freqs because most of the power ya put to one is wasted heating the
resistor in the thing. It's a terrible antenna for ham purposes,
anybody with half a brain and the same space a t3fd needs can put up a
far more efficient antenna for 1/10 the cost of a t2fd. That leaves
you out.

Then they'll tell you how they contacted Australia with a
> light bulb when they were kid hams.

That leaves you out again.

>The "using CW (manual keying) as an order-wire...(SNIP)

Whew...Lennie the Lame strikes again.

He frequently chastises othrs for "1930-s era practice", yet can only come up with ONE rant to supposedly undermine Dave Heil. And all of Lennie's "radio operating (and what HE call's "DXing") comes from a 3 year active hitch in the Army in the mid fifties)

What a loser. The SAME loser who has no license, has no vested interest in Amateur Radio, and who finds it necessary to embellish his service career by making up war stories about rear area radio stations and how HE allegedly operated 24/7, single handedly passing 1.2 million pieces of traffic.

The SAME loser who makes promises he doesn't keep, makes allegations he cannot substantiate, and who has no real reason for being in this forum save to antagonize and harrass.

Lennie...we've heard your rant before. We see through the lies, and NO ONE (except maybe Brian, who doesn't know regulations and Vipul, who doesn't know anything) believes you.

You are lying. You are untruthful. Your "facts" are "cut-and'paste" at best, and usually a day late and a dollar short as it applies to AMATEUR RADIO practice.

You are OUTTED. Get over it.

But not that much more. For example, you need to know the bandwidths of various
signals so that the entire signal is inside the band.

But the written tests go far beyond those basics needed to understand and
comply woth the rules and regs.
>
>> >> >not knowing some of the technical
>> >> >aspects can:

All of which is covered by the Tech test, acording to the FCC. Techs are
allowed to use every mode authorized to the amateur service, so FCC must think
the Tech test contains adequate questions and testing on "signal purity,
modulation, out of band emissions, and many more things that require a certain
level of technical knowledge to understand and comply with" the rules "to a
reasonable level of surety."

It's just plain logical, Carl. The only disagreement you've expressed here with the current written testing for Tech is over power levels, not modes or bands. So, according to your logic, the current 35 question Tech test contains all of the testing needed to insure that hams have clean signals, and keep them from interfereing with other services. It logically follows that the only additional testing for HF/MF access that is "relevant" or "necessary" is the regs concerning the HF/MF ham bands. Right?

>> >> How
>> >> can ignorance of things like how a DDS synthesizer works result in

>> test
>> does not guarantee that any ham knows how to program a DDS, either.
>
>But we are ALLOWED to use them (and they are becoming more popular
>because of the significant advantages they can provide over old-fashioned
>VFOs) ...

DDS also has significant disadvantages, too. And then there's PLL.

But all of that misses the point. No ham is REQUIRED to use a DDS, just as no ham is REQUIRED to use Morse code. So if there is no reason to test Morse code because Morse use is not required, there is no reason to test for DDS knowledge, because DDS use is not required.

If someone wants to use Morse or DDS on the ham bands, the rules make it clear that they are responsible for the proper use. What is wrong with freedom of choice of modes and technology, as long as they meet the regs?

> it is clearly necessary to understand the basics of how a DDS
>works
>to understand the principles necessary to correctly program it to operate on
>a certain frequency (and/or to figure out why it's not working right) ...

Sure - and that stuff can be learned as/when the decision is made to use DDS.

How many hams are actually using homebrew and self-programmed DDS rigs? How many manufactured ham rigs using DDS allow the user to easily reprogram the DDS? Answer: not many.

>> So the test questions on DDS do nothing to prevent interference to other
>> services. They are in the "hoop" category.
>
>No ... as I've explained above, they are not in the "hoop" category ...
>they are legitimate questions on technical qualifications ...

You have not made that point at all. Indeed, you've proven just the opposite point.

Now if you say that hams need to be tested on DDS because they may, at some point, decide to use DDS, then by the same logic they must be tested on manual Morse because they may, at some point, decide to use manual Morse.
>
>> >Not knowing (fill in some technical thing here) could also result in the
>> >ham
>> >having no clue that his radio was malfunctioning and creating
>> >interference
>> >(let alone how to fix it ...)
>>
>> Possibly. But there is no requirement that any ham use a particular
>>technology,
>> let alone a particular rig. The tests provide no assurance whatsoever that
>>any
>> particular ham knows how his/her rig actually works, or when it is not
>>working
>> right.
>
>All of the rigs available today work on rather well-established principles
>that should be (at least reasonably) understood by those who use them.

Why? There is no requirement that hams must repair their own rigs, just that those rigs meet the applicable technical specs.

>Heck ... when I took my novice test, there were questions about how
>oscillators worked ...

Not at the level needed to insure that an oscillator was working properly.
>
>> Even at your level of technical knowledge, can you guarantee that there is
>>no
>> possible malfunction of your ham gear that would go undetected by you?
>
>Nothing in live is 100% ...

In other words: NO

>However, the probability that I would recognize a malfunction (or understand
>the implications of a bad signal report, etc.) are higher because I was
>required
>to demonstrate at least a reasonable level of technical knowledge through
>the
>written tests.

How?
>
>Besides, I have test equipment that many hams don't have and check my
>gear on a pretty regular basis as preventative maintenance ...
>
And if it fails the day after a test?

Fact is, very few hams are cited by the FCC for technical problems nowadays. Just look at the enforcement letters. In fact, the big technical trouble Riley

faces wrt hams is getting commercial electric power companies (run by professionals) to clean up their line noise.

>> End result is that many if not most of the technical questions fall into
>>the
>> "hoop" category.
>
>I'm beginning to think that Hans' question as to whether you were
>laying the ground work for NTI (No Test International) may have
>been on the mark :-)

Nope. I'm just applying your logic of minimal testing on an equal basis to all ham radio testing.

>WHY are you so intent on eliminating all of
>the technical content?

WHERE do you get the idea that I'm against technical content? Nowhere do I say that. I simply point out the logical consequences of the minimal testing philosophy. And I point out that if one is going to call Morse testing "hoop jumping" because Morse use is a choice, then the same phrase can be applied to much of the writtens.

Ask Minnie the typist or Sally the lawyer or Tom the bus driver.
>
>And why are not all the "dumbing downers" not coming out of the
>woodwork to flame the hell out of you? (I guess it's ok to dumb
>down the technical part, but Morse is sacred, right???)

Nope. They see the logical validity of my argument. A hoop is still a hoop, regardless of its form.

And I do not concern myself with trolls, flamers, agitators and those more intent on personal attack than logical discussion.
>
>> >> Why is a Morse test "hoop jumping", but not the
>> >> writtens beyond the Tech?
>> >
>> >Because of what we're allowed to do in terms of repairing, modifying,
>> >adjusting, tinkering with, and even building our own equipment.
>>
>> FCC disagrees. They say the Tech written is adequate for doing all of
>>those
>> things to VHF/UHF/microwave ham gear. Is HF/MF ham gear somehow more
>>dangerous
>> or complex than VHF/UHF ham gear?

Well?

It's interesting that you duck the important questions, like that one.

>>
>> >We

>> >are the only radio service (other than the Experimental Radio Service
>> >under Part 5, which is limited to very specific uses) that allows such
>> >flexibility ... in return, we owe an obligation to demonstrate at least a
>> >minimum level of technical understanding and competence.
>>
>> Which the Technician test does - according to the FCC. Except for the
>> HF/MF-specific parts, the rest of the General and Extra writtens falls
>into the
>> "hoop" category - by your definition.
>
>As I stated in another message, my *personal view* (based on my
>professional experience) is that the Tech test does not justify 1500W
>privs ... and that the VAST majority of Techs would probably not
>care if they were limited to the sorts of powers that most commercial
>2m and 440 rigs put out ... say 50ish watts ...

OK, fine. But that only involves power level/RF safety, not signal purity and
the like.

>I think the General test should be good for, say 250w ... and that
>1500W should be limited to Extras (not that I have any plans of
>running that power, in fact, I wouldn't care if Extras were limited
>to 500w ... or even 250W) ... as I've said, there's much more
>"bang for the buck" in better antennas and better modulation/coding

Better than SSB?

>than in brute force power
>(if more hams were more technically knowledgable,
>they'd know that and there'd be a lot less cross-town rag chewing
>with full legal limit in violation of the minimum power rule ...)
>
>Now, I realize that there are old time Generals who will give up
>their linears when they are pried from their cold, dead hands ...
>there is an implemenation problem here, in the sense of "taking
>away" something from some ... so, while I don't think the FCC
>would implement these power limits, I think they *should* ...
>
>> So the FCC is WRONG? But they are "the expert agency charged
>> with managing the non-federal-govt. use of the radio spectrum that
>> belongs to all of us."!!!
>
>As above, nothing is 100% ... I disagree with the FCC on the power
>limits vs. technical knowledge required ... but that is a vestige of
>the past that they are sort of politically stuck with ... you know the
>history of how some old timers lost privs (and some are still bitching
>about it 50 years later ...)

Not me - and I was there, lost the privs, yada yada. It was 34 years ago. At
least I had the privs to lose.
>
>> >> Or is it that FCC wants hams to "jump through the hoop" of taking more

>> >> written
>> >> tests in order to get more HF privileges?
>> >

>NO ... I made the mistake of trying to stay consistent with your
>terminology ... I do NOT believe that the technical content in
>the written tests are irrelevant "hoops to be jumped through ... that's
>why I use the phrase "based on a demonstration of RELEVANT and
>important qualifications" ... you're smart enough to know what I
>meant, so please stop playing word games ...

No games. I just pointed out logical inconsistencies in your arguments.
>
>> Is it really all about the numbers, then?
>
>No ... it's about REASONABLE, RELEVANT QUALIFICATIONS.

"Reasonable" and "relevant" are in the eye of the beholder. Seems odd that you think Morse testing is neither, even though the mode is clearly thhe second most popular on amateur HF/MF, but all sorts of technical knowledge testing is reasonable and relevant, even though few hams homebrew from scratch anymore. (Except a few like me).
>
Compare the number of hams using Morse on HF to the number programming their own DDS systems.

And tell us:

Is HF/MF ham gear somehow more dangerous or complex than VHF/UHF ham gear?

if not, why is more technical knowledge needed to use HF than VHF/UHF?

>There are many with that overt attitude in here. Stupid. None of the
> FCC operator license tests have any academic validity.

As pointed out to you repeatedly, at least two academic organizations in YOUR area, (at least as late as 1991), assigned elective credit to Amateur Radio and GROL licensure as well as Private/Commercial Pilots), those being Saddleback Community College in Mission Viej and Orange Coast Community College in Costa Mesa.

I've not been in CA since 1992 so cannot speak for current policy, however SBCC granted me 3 elective credits for my Amateur Extra license and 3 for my Airman's Certificate. I was granted another total of 3 credits based upon correspondence courses completed in the Marine Corps, and 6 hours for classroom work in the Corps. Lastly, I received 3 credits from OCCC for completing the US Navy Group Paced Instructor Course.

None of the courses I completed was conducted by an agency with "any academic validity" (ie: accredited secondary institution), yet the credit was accepted for degree purposes.

>The FCC is
> not chartered as an academic organization. Never was.

It doesn't have to be.

ACT-PEP assigns ton's of credit to countless licenses, certificates and other verifyable pursuits as credit towards any number of college degrees.

>Bad form, OM. You are scrabbling on more minutae in a classic
> reducto ad absurdum counter which is totally invalid.

Whew...Pot...kettle...black. I hate throwing facts in your face and serving you crow, Lennie, but you insist on it.

>No, no, no. You cannot RE-define things already defined...you are
> NOT the Final Arbiter of that.

And YOU are...?

>Try staying with the program and the very distinct difference between
> technical and legal subjects and a purely ear-mind cognition skill
> that involves absolutely NO theory whatsoever.

And please try remembering that the code issue has been dealt it's fate as far as the FCC is concerned...We are simply waiting for the finality of the ITU to change the legal bindings of it. That you don't accept it is irrelevent. I don't particularly like it, but I accept it.

>Sure looks like Andy...oops, I mean Jimmie spends much time
> in here trying to FORCE his old ideas into everyone.

Man-o-man...You ARE heavy on the "pot/kettle/black" mode today, aren't you?

>Stuff it, Jimmie. Quit trying to put words on someone else's messages
> that weren't written by others.

Like I said...

>>What it really comes down to is that you use phrases like "force", "hazing
>>ritual" and "jumping through hoops" selectively.
>
> ...there you go again, putting words in others' writings. BAD form, OM.

Ooooops! There goes Lennie ! ! LYING again. Those ARE words YOU use repetitively. You've used them in the context of Morse Code testing within the last 12 hours.

>You think it is OK to force morse code down everyone whether
> it is not justifiable. No problem, Jimmie. We all know what you
> are trying to do here...

And we know what YOU are trying to do...You've been "outted", and the funny thing is you did it to yourself.

>>More put-downs and loaded phraseology. Why not just say "there's no reason
>for
>>Morse to have it's own stand-alone pass-fail test anymore?"
>
> ...damn! There you go AGAIN trying to act the editor! You are NOT
> one of those, don't have the authority.

The problem for YOU is he's right, Lennie. That is the ONE and ONLY reason to "delete" Morse Code testing. While Morse Code use may not have any place with commercial shipping or widespread use in the Armed Forces, it DOES have wide basis and applicability in the AMATEUR Service.

>Try opening your mind to "listen" to others that don't believe in
> your little morse-ist cult following.

Like YOU open YOUR mind to getting licensed and PARTICIPATING in Amateur Radio...yeah...right....

>You think you have a hammer. If that's all you have then
> everything looks like a nail to you. Others don't have that
> viewpoint.

There we are with that "pot/kettle/black" thing again. I am willing to bet if we deleted all attributions, smileys, etc, you'd have a hard time differentiating your stuff from that of those whom you claim to be so "closed

minded".

>It was the commercial and military people who pioneered SSB
> beginning in the 1930s, based on landline frequency-division
> multiplex "carrier" systems of 15 years earlier.

But it was Amateur Radio that was the impetus for experimentation and
applications.

>Bwahahahaha...hehehehehehe...snicker, snicker...

Find your fly open again, did you...?!?!

>
>How many bucks??? IIRC, Ed was 13 or 14 when he got his
>general.

Yup - and it got him all amateur privileges back then, for the "price" of a 13 wpm code test and the written of that time.

Was Ed a stranger to electronics at that time, or had he been a Novice, assembled a working station, made QSOs, etc.etc.? Maybe even built a rig or two?

Certainly not a stranger to electronics.

For the record, I got my Tech (same written as General back when) and Advanced at the age of 14. 'Twas the summer between 8th and 9th grade. Wasn't unusual at all, back then. Extra took two more years, only because FCC used to make hams have at least 2 years experience as General or above before they could even try the Extra. Some might say FCC made us "jump through the experience hoop".

>Being a ham is way motivated him to a career in radio
>electronics.

"Radio electronics"? I thought he was an EE.

Being a ham motivated me to go to EE school, get a couple of EE degrees, and to have a career in EE.

But not all hams start out that way. Nor are all hams motivated towards EE or related areas. Many of the best hams I know are public-service types - EMTs, volunteer firefighters, etc. Also the type who help out at events like the NYC Marathon. They come from all walks of life, hold all classes of license, and have varied levels of technical knowledge. But in a real-world emergency, any one of them will do more good than a dozen clueless-about-emergencies EEs.

>
>> > The written tests aren't an EE final ... never were, never were meant
>> > to be, never should be.
>>
>> Could not agree more.

Been there, done that, got the sheepskin. Funny thing, though - lotta EEs are clueless about practical radio. EE is a very wide field, of which radio is a tiny part.

>because we are supposed to be a technical service ... read
>97.1 again ...

So who determines what the "intended level of technical proficiency" for a given license class is? And who determines whether a given ham meets that level?

FCC seems to think most hams meet the intended level, given the fact that very few licenses are pulled for technical knowledge insufficiency, and practically all renewals and upgrades are routinely approved.

IOW, FCC sez those "extras who don't have a clue on the technical side" you mention meet the intended level, because FCC keeps renewing their licenses.

what about interference to other hams?

>> >... nothing more, nothing less.

FCC thinks the Tech written is adequate qualification for showing that people
have a reasonable minimum level of
qualification to operate safely and with a minimum potential for interference
to other radio services on all amateur freqs and modes above 30 MHz. Why does
FCC require so much more written testing for full privs on amateur HF/MF? Sure,
there are HF/MF specific regs and propagation, but the General and Extra tests
go far beyond regs and propagation specific to HF/MF.

For example, how does knowing Thevenin equivalents and complex impedance
calculations help hams operate safely and with a minimum potential for
interference to other radio services?

There's another angle, not just about pecking orders. People often do not value
that which they get easily. Until it's gone.
>
>But too much of ham culture is built around this pecking order (and
>attempting at all costs to maintain it) ... that hurts ham radio and I
>would like to see it die away with the new generation of hams.

Are you willing to give up your 2x1 vanity call to help make that happen? How
about reducing the number of license classes to one, so that all will be equal?
Perhaps we should all be limited to low power and simple antennas, to avoid
anyone being a "big gun". Maybe we need a Handicapper General, like in
"Harrison Bergeron", so that there will be no more "elitism" or "pecking
order".

I don't think so! But what about you?

Or does it come down to the idea that what bothers you is not the idea of a
pecking order, but rather the pecking order that exists vs. the one you want to
exist?

Why is a simple 5-wpm Morse exam an "unnecessary requirement?"

> Some folks think that
> the tests are "way easier" today than they were "in the good old days."

Probably not, but I could be wrong about that. I already had my GROL from my
college avionics curriculum when I took the writtens. I certainly
acknowledge that an interested soul would likely find the writtens
challenging without the benefit of prior electronics experience. The
equalizing factor being published Q&A pools, of course.

> The written tests aren't an EE final ... never were, never were meant
> to be, never should be.

Absolutely correct.

> prove they are 'dedicated enough' by making them 'work hard' for their
> license."

I agree, but I honestly don't know where all this "working hard" comes from.
I think many have lost sight of the bigger picture.

A. 5-wpm in NOT working hard, it's NOT "jumping through hoops, and many
believe (Myself included.) it's NOT an unnecessary requirement...it's a very
BASIC requirement. (Dare I say...entry-level.)

B. As for 5-wpm being an exclusionary tool...puh-lease. I'm also a CBer, the
very "malady" that some postulate that the "CW immunization" exists to
protect the bands from. The only group that a 5-wpm "discriminates" against
are those who don't even want to give it any serious effort to begin with.

C. The code test can no longer be considered exclusionary as there exists a
no-code license that allows entry into ham radio. Additional privileges
(Hey, remember that word?) can then be had by passing additional exams. (One
of them being Element 1.)

> Too damned many people value their license for what they perceive as
> some sort of epic, heroic effort that they made to get it, rather than for

I agree, no heroic effort at all...just a "license to learn." ;-)

Ham culture? Carl, meet Vipul. Vipul, meet Carl. You two will get
along famously. Let me know when you guys decide on the definition of
an "only-coder".

To heck with the "dog in the manger", thing...I was shocked at the "work ethic BS" comment.

If we still had some of the 40's and 50's era "work ethic", perhaps we wouldn't be in the financial slump we are today...Instead, the 80's era "make it quick and effortlessly" has surpassed any real "work ethic", and we have since moved into the Burger King era of "My Way Right Away".

>FCC thinks the Tech written is adequate qualification for showing that people

>tests
>go far beyond regs and propagation specific to HF/MF.

This one's simple, Jim...Despite the rantings of "you-know-who" to the contrary, the FCC expects Amateurs to fulfill that "bureaucratic language" in 47CFR97.1 about creating a pool of technically qualified radio operators to fulfill that OTHER "bureaucratic language" about emergency communications.

If not, then the questions about why are there questions above and beyond mutual interference are valid.

The thing is the FCC does NOT write rules and regulations just for the sake of fulfilling some set pattern of "bureaucratic" writing style. They write rules and regulations to meet a need.

The present rules both meet a need and fulfill a goal.

>Who are you to judge why someone else values a thing? What is wrong with live
>and let live?

The fact of the matter is that SOME people must denigrate the fact that it
WAS a "epic" and "heroic" feat for others to complete. Failure to do so means
that someone did something better than the complainer did. All things are as
equally easy as THEY did it.

>There's another angle, not just about pecking orders. People often do not

Part 15 aside, you aren't allowed to produce RF inside the amateur
bands.
It sort of evens out.

> Ahem. Morsemanship has NOTHING to do with ANY kind of
> technical smarts. None. Zip. Nada.

Who said it did? Morse testing addresses the operating side of things.
After all, an amateur license is, above all, permission to operate.
Permission to build a piece of amateur gear isn't required by the
government.

> >So the FCC is WRONG? But they are "the expert agency charged with managing

What is a "morse-ist cult"? Why is it "little"? Have you tried the
experiment Jim suggests? Regardless of what goes on in "the rest of the
radio world", radio amateurs use morse code widely today.

> You think you have a hammer. If that's all you have then

> Bwahahahaha...hehehehehehe...snicker, snicker...

Why izzit that when you begin your rant of ancient morse tales, they
begin with landline telegraphy but when some mentions the age of SSB, it
has to be confined to amateur radio use? Can you say "double standard"?
You are soooooo
transparent.

Yes! So is your Rotweiller! That IS my point. Like your tens of
thousands of "otherwise qualfied" amateur radio upgraders, neither your
dog nor I are really "otherwise qualified" unless the qualifications for
heart surgeons are significantly lowered.
>
> As long as people can pass the prescribed written tests, they are,
> by definition "otherwise qualified," with the exception of the remaining
> 5 wpm Morse test, to operate on HF.

You've used the same term, "otherwise qualified" individuals in
describing people who are not yet hams but who would flock to amateur

radio when and if morse testing is done away with.

> > The only
> > thing holding me back is that I'm not going to jump through their hoops.
>
> I think it would be more accurate to say that the only thing holding you

> thing called passing the tests and getting the license.

Yeah, that's what held back those "otherwise qualified" individuals who upgraded in amateur radio. They couldn't pass the test and get the license. A testing element had to be eased in order for them to do so.

Your comment about requisite intelligence and skill is an unknown to you.

> I have NEVER advocated that anyone should operate a radio without

>>The "using CW (manual keying) as an order-wire...(SNIP)
>
> Whew...Lennie the Lame strikes again.

Actually, I walk very well, no lameness at all.

The "use of CW as an RTTY order-wire" is ridiculous on the face of it...whether first claimed by Heil as an original innovation or, as later claimed, "State Department procedure."

Firstly, Sgt Putz, Renowned Hostile Action Hero, has NO experience in 24/7 military communications, any branch, any time, anywhere. His only claim to fame is as "communications officer" of some Tennessee STATE Guard, an organization NOT a part of any National Guard that doesn't take orders from any US military or even the President of the USA. [it's like a "sojer-in-da-woods" militia group but with pretty titles and medals]

Sgt Putz has NO real idea of what an "order wire" is, let alone any knowledge of how to use it. It has been explained in here but he still doesn't get it. He's never been on one. It is just the command circuit, one of many in one link to another station or terminal (in the case of landlines, where the term originated).

If one has a single RTTY circuit to someplace, the "order wire" is one and the same with regular message traffic, just a pause in the traffic to send information about the circuit.

Using manual telegraphy as an "order wire" on an RTTY circuit is a nonsense idea on the face of it. If the TTY works at all, then it can be used to send administrative information about the circuit just as well as regular message traffic. TTY does it faster than any manual telegraphy with the advantage of printed copies at both ends as well as the ability re-send in reverse to confirm good copy.

If "conditions are too bad to permit RTTY operation" (one of
Heil's original claims) then that single radio circuit cannot
handle either message traffic or order-wire information. It
should be a morse code radio circuit then, for both message
traffic and order-wire information. There is no mode mixing
and hasn't been so since the 1930s in worldwide
communications.

> He frequently chastises othrs for "1930-s era practice", yet can only
come
>up with ONE rant to supposedly undermine Dave Heil. And all of Lennie's
"radio
>operating (and what HE call's "DXing") comes from a 3 year active hitch in the
>Army in the mid fifties)

Incorrect in part. I make note of ADA and the entire ACAN because it
involved HF radio as the primary method of communications for the
Far East Command Headquarters in the 1950s. There were no satellites
then, no operational troposcatter, no reliable, secure undersea cables
to carry the mass of messages needed by an area command to/from
the USA. HF radio was primary.

Much has changed in military communications in the last half century.
DSN networking over fiber-optic cables includes various modes of
encryption and reaches all US military stations in the world. So does
military satellite communications. Multiple-circuit communications is
now a normal mode whether portable landline or portable troposcatter,
over military satellites, or over the DSN. HF radio is still available but
it has been relegated to a secondary or tertiary back-up status, not
used for much regular 24/7 communications.

For small-unit tactical communications digital radio (AN/PRC-119
family) has been operational for 14 years with excellent COMSEC
via FHSS and built-in (in SIP versions of the SINCGARS) digital
encryption for voice and/or data. VHF/UHF tactical radio has
secure modes compatible with SINCGARS, allowing networking
of ground, air, sea, or space (satellite) units. HF communications
capability is there but also relegated to secondary or tertiary back-
up status.

Some long-time radio AMATEURS still consider the ultimate peak
of radio practice to be "working DX on HF with CW." The US
military was phasing out manual telegraphy over 40 years ago.

US government agencies still maintain HF radio nets. SHARES
is a good example, principally in NVIS linking in under-500-mile
circuits. SHARES is incorporating ALE, Automatic Link
Establishment, to rapidly determine the best frequency and, if
selected as an option, automatically QSY to that best. There is
a Federal Standard for ALE developed by commercial and
government organizations working in concert. Manual telegraphy
is not a prime mode in SHARES and is not even available at
most SHARES stations.

Some long-time US radio amateurs consider the ultimate in
radio to be "working DX on HF with CW."

I do not mention the commercial side of my radio-electronics
career much for two reasons: Relatively-recent work may involve
sensitive areas still classified; some commercial development
is still protected by proprietary corporate classification.

> What a loser.

Only in trying to argue with stubborn, never-give-in ignorant
ex-military-idiots who would rather fight anyone not kissing
their "military backgrounds." :-)

I am retired with a comfortable income, real property having no
debts or liens. Is that "losing?" :-)

Let's look at Sgt Putz, self-renowned Hostile Action Hero. He
has never worked any real 24/7 military communications during
a military career terminated by a medical discharge. He has
never worked IN any radio-electronics engineering, only on the
sidelines as a purchasing agent, filling out orders. He seems
to travel around to many different residence addresses and has
claimed several different medical employers. That would
signify some instability after a military career.

>The SAME loser who has no license, ...

Actually, I was granted a First Class Radiotelephone (commercial)
Operator license in March, 1956. Without any formal classes,
just reading a borrowed copy of ALL the 1955 rules and regulations
of the FCC. One exam sitting at an FCC field office in Chicago.

No walking barefoot in the snow uphill both ways, I took the train
for the 90 mile trip and wore shoes the whole time. :-)

>... has no vested interest in Amateur Radio, ...

To have a "vested interest" implies being or having been granted
an amateur radio license or working for some concern supplying
goods or services to radio amateurs. I have no amateur license
and my contract work does not involve amateur radio.

Having a radio amateur license grant might be a fun hobby but
that would be only a hobby. I do not consider it some grande
exhalted life's work or ambition or a mystique-laden fantasy
land where licensees are somehow "better" than ordinary
mortals...or as a surrogate for a terminated military career
and rank therein.

>... and who finds it necessary to embellish his service career by
>making up war stories about rear area radio stations and how HE allegedly
>operated 24/7, single handedly passing 1.2 million pieces of traffic.

Contrary to famous hero Sgt Putz' allegations, I've told NO "war stories" in here. I've recounted an assignment at a signal battalion in Tokyo whose task was to provide primary communications over HF circuits to the USA and the rest of ACAN. N2JTV may be contacted for confirmation considering that Gene was assigned to the same battalion and company as I and at the same time.

The Korean War truce period began in July, 1953. Technically, the Korean War never terminated; it remains in a state of perpetual truce.

Area command headquarters are never at "front lines." Several former members of the FEC Sig Svc Bn agree that our battalion never gave up an inch of ground to the enemy in Tokyo from 1953 onwards. :-)

Anyone in military service is obligated to work as long as required (or ordered). That is a given and the "24/7" label is correct even if not implemented in someone's particular military service life.

Contrary to the self-described Hostile Action Hero's claims, I've never said I "single-handedly passed any traffic." [when using my military driver's license I always kept both hands on the jeep's wheel] ADA's message throughput in 1955 was about 220,000 messages a month [source: Pacific Stars & Stripes, mid-1955]. That rate is impossible for any sole human to maintain. What "HAH" (Hostile Action Hero) rewrites and misquotes is an estimate of the message traffic that I was responsible for maintaining during my assigned operating hours.

>> The SAME loser who makes promises he doesn't keep, makes allegations he
>cannot substantiate, and who has no real reason for being in this forum save
>to antagonize and harrass.

Tsk, tsk, tsk. Exactly who is the "loser?" Those who are retired after having verified experience, present arguments in the subject without personal insult, note required references, and yield to those counter-arguments on the subject? I don't think so.

The REAL losers are those stubborn, conservative, my-way-or-the-highway whiny little creatures who use personal insults in place of arguments on the subject, misquoting others, and trying to imply that others wrote something they imagine. Tsk, tsk, tsk.

> Lennie...we've heard your rant before. We see through the lies, and NO

The multiple personality forum is on the second floor next to the meeting hall. Please take your "we" there and have a group meeting of all your personalities so as to arrive at a consensus.

> You are lying.

No. What I've said as to past experiences are verifiable from references presented in here.

>You are untruthful.

Redundant.

>Your "facts" are "cut-and'paste" at
>best, and usually a day late and a dollar short as it applies to AMATEUR
>RADIO practice.

Use of text editor "copy" and "paste" functions is commonplace and
not something illegal or unethical. Tsk, tsk, tsk.

GETTING INTO amateur radio cannot involve "amateur radio practice."
If one is ALREADY IN amateur radio, then they've passed the tests
of the PAST. The morse code test has been a part of the US amateur
license tests since the first US radio regulation agency was formed
in 1912. That it has "always been so" is no valid reason for maintaining
the test forever.

Since the FCC is the only body granting US amateur radio licenses,
they determine what is meaningful for their task of regulating US
civil radio. It is NOT up to the individual or collective (limited)
"amateur community" to judge or determine who shall enter the
area (or be granted a license). It is NOT up to some ego-driven
self-glorification long-timer to "judge" based on their own pet,
personal prerequisites.

My arguments started out on the morse code test issue four years
ago in here. Those PCTAs who commented publicly insisted that
all must do as they did (take the morse test), yet gave no valid
reasons for so doing other than to personally satisfy their own
wishes. That is not a valid reason for the FCC, just a selfish one
to satisfy their mythical idea of what constitutes amateur radio.

The ego-driven, the stubborn, the credentialists, the traditionalists
can all vent their personal mental spleens by all the pejoratives
against NCTAs they can imagine. Those live in an imaginary
world anyway, so all can expect misquoting, word-twisting, and
other fabrications as being part of the PCTA viewpoint. They
can't take the heat and should get the hell out of the kitchen.

> You are OUTTED. Get over it.

"Outed?" Yes, I am a public heterosexual! Two months
ago I was in one of our closets (painting). I've come out
of the closet! :-)

Most of the time I write in our home office so I am not "out."
The outside window is open, however, and the outside air
temperature hit 80 F a few minutes ago. Clear blue skies at
12:38 local, nice day and the Superbowl count-down has
begun. It's too bad some of you have to walk around angry
and frustrated, railing mightily at all who don't want your
imaginary world. Tsk, tsk, tsk.

>Your apology will come only after you submit proof that you are not an
>American. I'm not going to do your leg work for you.

Why must I now "submit proof I am not an American?!?"

I've been one since birth. The US federal government,
three state governments, four county governments, two
city governments, FBI, IRS, FCC, FAA, US Army, USN,
USCG, USAF, DCAS, and some other alphabet-soup
organizations all agree with that and have the
documentation to prove it.

>It is amazing just how quickly you snipped all the stuff referencing Key
>Officer listings and got the hell off that subject before revealing any
>more of your ignorance.

What's to bother with on a listing of staff that looks like
a DSN directory listing (but without the numbers)?

Didn't you get the medal you think you deserved for all
that innovating, important communications work at those
big embassies?!? Tsk, tsk, tsk.

Geez, I would think anyone pioneering a New Method,
like using CW for an order-wire on an RTTY circuit
should at least get a write-up in the Radio Club of
America's annual awards dinner newsletter!

>You're quite the tap dancer.

Not all that good. I put away my Haney Plates many
years ago. :-)

Now soft-shoe is a different thing! :-)

Years ago in my bachelor days I went with a gypsy
(contract company dancer). She taught me several
things. It wasn't tap dancing. :-)

>of days ago you mentioned something about Key Officer lists.

I did that three years ago, Mr. FSO. Forgot again?

Looked like just a listing of staff at each embassy. I will
grant that staff had keys and official positions, therefore
listings of staff can be called "key lists."

In magazines such a listing is called the "masthead."
Names, titles. DSN phone directories also have them.

>What happened to that particular rant?

Everyone was waiting for your insufferable pride to boil
over. :-)

The US amateur radio license is BOTH an operator and a
station license. I'm surprised Herr Robust hasn't learned
that yet. Regulations may call the station a "control point"
but it IS the station nonetheless.

>Your words. You use them or words like them all the time in here.
>Don't forget your very recent, "Awwww. Don't like your own kind of
>commentary coming right back to you? Tsk, tsk, tsk."

Poor baby. You still do a BAD imitation of mighty morseman
Miccolis. Let him speak for himself.

You've been requested to cease the BAD imitation of mighty
morseman Miccolis. Please comply, OM.

>Right. He should wise up to the fact that you consider yourself to have
>filled the position. Tell him that we can't meet on HF to discuss
>amateur radio policy matters while you're at it.

Why is it a "requirement to meet on HF to discuss amateur
radio policy matters?" Do you need some "privacy" from
perceived nasty "civilians?" ?

It's fairly obvious to all that Herr Robust can't handle negative
opinions of his viewpoints and resorted to personal insult
surrogates long ago. That's not "discussion," just cussin.

>What is a "morse-ist cult"? Why is it "little"? Have you tried the
>experiment Jim suggests? Regardless of what goes on in "the rest of the
>radio world", radio amateurs use morse code widely today.

Only on HF bands in the USA. Some European countries
allocate LF bands not yet allowed for US amateur use
(160-190 KHz is still license-free in the US).

Heil disagrees with the IARU position on morse code testing.
He is "superior" to them as well?!?

>Why izzit that when you begin your rant of ancient morse tales, they
>begin with landline telegraphy but when some mentions the age of SSB, it
>has to be confined to amateur radio use? Can you say "double standard"?
>You are soooooo transparent.

The "age (era to be exact) of amateur SSB" began about 1950.
It was in all the ham publications of the time and the decade
following.

Was Heil licensed then? Did he have an "interest" in radio then? If no to either, why is he prattling on like some whiny little opaque-to-light-of-newness poor baby who can't take opposition?

How much SSB equipment did the US embassies in Africa use, Mr. FSO? Did you invent the use of CW as an order wire on State's SSB circuits too?!?

Jim,

I never asserted that NCI's membership constituted a majority of hams.
Nor, I might point out, does ARRL's membership constitute a majority
of US hams ... more like a bit less than 25% IIRC the last numbers I
noticed.

The majority I was referring to was a majority of all licensed US hams
(since you were talking about NCI's level of influence with the FCC)

73,
Carl - wk3c

1072. How Long until K1MAN receives his revocation letter?

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-26 23:05:32 UTC
From: rfburns2003@yahoo.com
Message-ID: <634e00e4.0301261505.6306daf2@posting.google.com>
Source record: 60101
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

I'm going to climb out on a limb here, and predict that K1MAN will get an FCC letter in the first week of February. The contents are anyone's guess, but my GUESS is, the contents will be based on previous letters written to the baby broadcaster. I predict the new letter will tell Baxter his license is suspended and scheduled for a revocation hearing, and will follow a format like this:

Dear Glenn A. Baxter (K1MAN),

The commission wrote you last year about deficiencies in the operation of K1MAN. You have had one full year to correct these deficiencies. Despite the commission giving you ample opportunity to correct those deficiencies, you have failed to do so. The following continued deficiencies were noted this past year:

Broadcasting

The format of the so-called K1MAN bulletin resembles a broadcast more than a bulletin. Accordingly, we will refer to it as a broadcast henceforth. K1MAN broadcasts news and views that could alternately be provided through other services. To the extent that K1MAN did not observe the prohibition regarding this practice; this practice was in violation.

Failure to Observe Frequency Sharing Rules

K1MAN has commenced broadcasting over numerous QSO's in progress. When asked to delay the K1MAN broadcast, the response from K1MAN was "No, I am not going to ruin a nine year precedent." This shows a gross misunderstanding of the basis and purpose of part 97 and the amateur service in general. No licensee is authorized exclusive use of any frequency. This practice was in violation.

Lack of Control Operator

Numerous stations from the US in the South; the Midwest; and the Northeast, attempted to contact K1MAN's control operator over the phone and on the radio. The fact that there was no response on several occasions indicates that either there was no control operator at the control point, or that the control operator was negligent, by beginning the K1MAN broadcast over ongoing QSO's and ignoring advice that the frequency was in use. This practice was in violation.

Defamation

Numerous incidents of defamation per se of other amateurs have occurred on the K1MAN broadcast. This practice was contrary to the basis and purpose of part 97 and was therefore, in violation.

Threats

You advised amateurs to visit the K1MAN web site for information. On the web site, K1MAN advised "foolish amateurs" to QSY or QRT, when the K1MAN was about to commence, or risk the filing of criminal charges. These threats were the subject of a commission letter dated January 2002; a letter from the office of US Attorney, Jay P. McCloskey in Maine; and a letter from FCC Counsel John P. Greenspan. You also advised other amateurs to file their own felony affidavits against amateurs who used the frequency on which you intended to operate, after being advised that this practice was illegal. This practice therefore, was also in violation.

Routine Solicitation of Donations for Benefit of a Business

Soliciting contributions for IARN on a daily basis constituted using amateur radio for the routine benefit of a business. This practice was in violation.

Use of Unauthorized Tape Recordings.

There have been numerous instances of unauthorized use of tape recordings played over the air. This practice was in violation. Walter Cronkite's Attorney recently wrote you a letter indicating you do not have authorization to use his tape recorded voice identification on your broadcast. This practice was in violation.

Copyright Infringement

The ARRL recently advised you that your distribution of the Walter Cronkite CD to AARA life members was in violation of their copyright of that material. You advertised the giveaway of copies of this CD on your broadcast. This practice was in violation.

Poor Engineering Practices

Distortion, malfunctioning equipment, drifting transmitters, and erratic starting and stopping times characterized your broadcasts over the past year. This practice was in violation.

Lack of the Character Qualifications to be a Commission Licensee

The FCC's John P Greenspan letter, and the Assistant US Attorney's letter, written by Gail Fiske Malone, pointed out that your actions indicated that you may very well lack the character qualifications to be an FCC licensee. Greenspan also stated, "You certainly lack the maturity but that is, unfortunately, not grounds for revocation." After reviewing ongoing complaints by numerous amateurs and after reviewing the record of your correspondence with the commission, we concur with the previous opinions. You do not possess the requisite character qualifications to be a licensee.

Accordingly we have suspended your station and operators licenses, effective immediately, and have designated your license for a revocation hearing before an administrative law judge, where you will have the burden of proving why you should remain a commission licensee.

Sincerely,

The Enforcer

1073. Re: Lennie, You're OUTTED, Now Get Over It

>> Whew...Lennie the Lame strikes again.

> Actually, I walk very well, no lameness at all.

Lameness applies to more than one's ability to demonstrate a steady gait.

>The "use of CW as an RTTY order-wire" is ridiculous on the
> face of it..(SNIP)

So's your claim to an extra lite out of the box.

So's your claim of ARRL dishonesty.

So's your claim of ARRL VE dishonesty.

So's your embellishment of your Army "service" by associating yourself
with KIA's who's names you don't even know...

So's your claim of radio services solely for recreational applications.

So's your claim of the LACK of "service to the nation" of Amateur Radio
public service providers.

>Firstly, Sgt Putz, Renowned Hostile Action Hero, has NO
> experience in 24/7 military communications...(SNIP)

The forum, Lennie, is AMATEUR RADIO POLICY.

>His only claim to fame is...(SNIP)

...not known to you. And whatever my experience in military
communications, it STILL does not have any relevence in this forum anymore than
YOURS does.

>Sgt Putz has NO real idea of what an "order wire" is...(SNIP)

Nor do I care. It's not germane to this forum. And besides, the simple
fact that you have made a career out of nit-picking it with Dave leads me to
believe it's not worthy of my time or interest. You've proven nothing.

>> He frequently chastises othrs for "1930-s era practice", yet can only
>come
>>up with ONE rant to supposedly undermine Dave Heil. And all of Lennie's
>"radio

>>operating (and what HE call's "DXing") comes from a 3 year active hitch in
>the
>>Army in the mid fifties)
>
> Incorrect in part. I make note of ADA and the entire ACAN because it
> involved HF radio as the primary method of communications for the
> Far East Command Headquarters in the 1950s.

Nothing is "incorrect". You are once again substituting military communications for Amateur Radio. Other than the basic physics of radiowave propagation, the two are NOT synonymous.

>Much has changed in military communications in the last half century.

Yes, it has, but like Lola sitting in the chair with faded feathers in her hair, NOT for you. You still seem to think that what you did in the Army pertains to Amateur Radio. It does not. Nor does what you can quote from industry journals...The ONLY thing that pertains to Amateur Radio policy is Amateur Radio...I know that's hard for you. Sorry.

>For small-unit tactical communications...(SNIP)

Small ARES units? Small REACT units? Red Cross or SATERN? If not, you just spent a lot more bandwidth delving into MORE military stuff, proving yet again that you are suffering from Acute Situational Substitution of Worthless Information for Policy Edification. You figure out the acronym.

>Some long-time radio AMATEURS still consider the ultimate peak
> of radio practice to be "working DX on HF with CW." The US
> military was phasing out manual telegraphy over 40 years ago.

The intent and purpose of Amateur Radio communications vs Armed Forces communications have been lost upon you, Oh Dimwitted One. why do you insist on trying to get orange juice from prunes?

>Some long-time US radio amateurs consider the ultimate in
> radio to be "working DX on HF with CW."

Some do...Some don't. You do not posses the experience base to determine who's who. Ignorant, as usual.

>I do not mention the commercial side of my radio-electronics
> career much for two reasons: Relatively-recent work may involve
> sensitive areas still classified; some commercial development
> is still protected by proprietary corporate classification.

Uh huh...I see...LENNIE'S A SECRET AGENT! He COULD tell us but then he'd have to shoot us! WhoooHooo! You go, Lennie!

Of course when others, myself included, have declined to discuss military or corporate matters, WE are lying, telling tales, or otherwise exercising "puffery" or "patriotic buffoonery"...But LENNIE can do it and it's "OK".

Uh huh...Riiiiiiiggggghhhhhhttttttt ! ! ! !

>Only in trying to argue with stubborn, never-give-in ignorant
> ex-military-idiots who would rather fight anyone not kissing
> their "military backgrounds."

My mlitary background doesn't NEED kissing, Lennie.

And as for the "never give in", etc etc, WHOSE ego needs polishing there, Lennie? Not mine. I've already made my concession speeches on the impending deletion of Code testing. That It wasn't in YOUR time frame is YOUR problem.

>I am retired with a comfortable income, real property having no
> debts or liens. Is that "losing?"

There's a difference between BEING a loser and "losing".

That you are retired and live without external support is laudible.

However the fact that you are an archived liar, cheat and social ner-do-well puts YOU in my "loser" column. Unless I hit the lottery, I will never be on the Forbes 500 Richest Persons list, but no one will be able to call me dishonest, untruthful or deceitful.

>Let's look at Sgt Putz, self-renowned Hostile Action Hero. He
> has never worked any real 24/7 military communications...(SNIP)

Where I have worked, where I have gone, what I have done professionally has nothing to do with AMATEUR RADIO.

That you can only squirm around trying to make some issue from what I have done or not done in the Armed Forces or civilian life is funny, Lennie...No..actually...it's pityful.

>>The SAME loser who has no license, ...
>
> Actually, I was granted...(SNIP)

...nothing that pertains to AMATEUR RADIO.

>Contrary to famous hero Sgt Putz' allegations, I've told NO "war
> stories" in here.

Whew! More LYING in the face of facts to the contrary.

We're back to the "loser" mode, Lennie. Try and exceed my expectations.

>Anyone in military service is obligated to work as long as required
> (or ordered). That is a given and the "24/7" label is correct even
> if not implemented in someone's particular military service life.

>Contrary to the self-described Hostile Action Hero's claims, I've
> never said I "single-handedly passed any traffic."...(SNIP)

It's not what >>I<< said Lennie, it's what YOU said...You repeatedly cited the volume of traffic in the first-person-singular until it was repeatedly pointed out to YOU that the math didn't add up.

>[when using
> my military driver's license I always kept both hands on the
> jeep's wheel]

And how did you shift gears...???

>Tsk, tsk, tsk. Exactly who is the "loser?"

>Those who are retired
> after having verified experience, present arguments in the subject
> without personal insult, note required references, and yield to
> those counter-arguments on the subject? I don't think so.

"Nazi" "Jackbooted thug" "elitist"...Some of the adjectives initiated by "NoCWTest", allegedly one of your many screen names.

And as for doing something "without personal insult", we need only scroll up through THIS post to see your repetitive use of even more less-that-complimentary adjectives and salutations.

Doesn't it get painful stepping on your own parts so often in the same post?

>The REAL losers are those stubborn, conservative, my-way-or-
> the-highway whiny little creatures who use personal insults in
> place of arguments on the subject, misquoting others, and trying
> to imply that others wrote something they imagine.

Which describes you to a tee, Lennie. Thanks.

>No. What I've said as to past experiences are verifiable from
> references presented in here.

"Experiences" alone are not your only violation of the truth, Lennie. Not by a long shot.

>GETTING INTO amateur radio cannot involve "amateur radio practice."

Sure it does. The Amateur Radio written examinations all have numerous questions on "how" Amateurs communicate. THAT, among other specifics, is Amateur Radio PRACTICE.

>> You are OUTTED. Get over it.
>
> "Outed?" Yes, I am a public heterosexual! Two months
> ago I was in one of our closets (painting). I've come out
> of the closet!

And no doubt the fumes still cloud your judgement.

L O S E R, Lennie. You keep trying to misrepresent the overall character and fiber of Amateur radio for some personal vendetta you obviously have against it.

There IS an "imaginary world" at work, Lennie, but it's not mine to deal with...It's yours...

Sorry you can't seem to find your way out of THAT.

> > hours."
> > or something like that ... BFD ...
>
> My recollection is of how many countries you'd worked from home on 10m.

OK ... so what if I mentioned something about working some DX? ... again,
I'm not chasing it ... and currently I work all of the HF/VHF/UHF bands from
160m through 70 cm, not just 10m, and can do so without commercial power
with redundant rigs, just in case of emergency.

> I didn't ask for a travelogue or justification. I just wondered how you
> could be spared from what you call "important work".

The CEO of my company gets to take vacations, too ... the fact that
one's work is important doesn't mean they're required to work 24/7/365.

I wonder if, after just 12 hours of our
announcement of bombing in Baghdad, if Baxter
will start calling for his "jump teams" to go into Iraq...?

Hmmmmm.....great potential publicity for ham radio eh?

Can't you just picture a CNN video in the future
showing some of Saddam's elite Republican Guards
captured in a bunker alive someplace, along with
a cache of small arms, chemical munitions and
2 or 3 Yaesu or Kenwood HF rigs with 14.275
stored into adleast one of the channel memories?

>Another 200KHz and you'd be on 2 meter simplex (146.52). :-)
>
>19 years in the military. Did you get a pension? Or just miss out?

Robert:

Full pension and benefits. Nobody "retires" without them. The armed
forces began offering 15-year pro-rated early retirements in the early
90's. My career field in the Air Force became eligible in '93, but I
waited until I was safely past the 18-year point before applying for
early retirement. With 18 years of service, you're already, by public
law, vested for retirement, so there's no way they can "take back" your
retirement if some future Congress decides that all those early retirements
weren't such a good deal after all (highly unlikely - but I wasn't taking any
chances!). Also, the "pro rata" retired pay after 18 years represents
such a small percentage loss that it is actually recuperated by virtue
of your annual Cost Of Living Allowance (COLA) increase. In my case,
I had a 20-year retirement date of Aug. 1996, but retired in November, '94.
I got my first COLA only a month after retiring -- and by the time I reached
my "normal" retirement date, my retired pay was already a couple of
pennies more than it would have been if I had retired "on time" -- assuming
no further promotions. Since I came into the Air Force late in life (age 23),
and had already had more than my share of challenging assignments, I
decided to join just about every other Master Sergeant I knew and get out
while the getting was good. I could have stayed in, been promoted again,
and spent the rest of my time "deployed" to some place where I could
live in a tent, shivering and baking, working 16-hour days 7 days a week,
and tiptoeing through a minefield of Political Correctness, while trying to
lead a bunch of Welfare Warriors through the challenges of making an
attempt to look like they're doing something useful. That's what did it
for me -- I got too damn sick and tired of having to always try to find the
right button to push to make today's lazy, unmotivated, self-centered and
disrespectful young people do some actual work.

BTW the year I was "downsized" and took my early retirement, my
squadron lost all six of it's Master Sergeants! My Wing commander tried
everything he could think of to "bribe" me to stay in, but I wanted him
to fire our Squadron's Operations Officer and our Senior Enlisted
Advisor -- and he couldn't do that!

Maybe yes, maybe no. There have always been those who went for the quick and easy way, and devil take the hindmost. Do you think David Sarnoff was a paragon of business virtue?

What is that need and goal? Are you saying that FCC intends for the license tests to do more than insure that "people have a reasonable minimum level of qualification to operate safely and with a minimum potential for interference to other radio services"?

Not what I'm talking about, Steve. The tests were not that hard for me, even as a young teenager. They were much harder for others.

My point is that the statement

"many people value their license for what they perceive as some sort of epic, heroic effort that they made to get it, rather than for what it allows them to do (and the latter is where the value of the license lies)."

says that there is only one valid reason to value the license. I disagree with that concept.

>>
>> Bert,
>>
>> It's in reference to any unnecessary requirement.
>
>Why is a simple 5-wpm Morse exam an "unnecessary requirement?"

Because some folks don;t like the idea of having a code test.

Some will tell you that the Morse test is "unnecessary" because no US ham is
required to use Morse. IOW, it's possible to operate a ham station in
compliance with all rules and regs, yet have no Morse skill at all.

Yet what those folks forget is the fact that the same thing can be said about
almost everything in the written tests, as well. Go down that road far enough,
and the "necessary" part of the tests boils down to the rules &regs plus some
basic theory needed to understand the rules. The rest is "unnecessary" if that
minimal philosophy is taken.
>
>> Some folks think that
>> the tests are "way easier" today than they were "in the good old days."
>

>Probably not, but I could be wrong about that. I already had my GROL from my

>acknowledge that an interested soul would likely find the writtens
>challenging without the benefit of prior electronics experience. The
>equalizing factor being published Q&A pools, of course.

I took the writtens way back in the days of FCC-office testing. Even before
Bash books. How "hard" the tests were is purely a subjective opinion, because
we don't have the old tests available for comparison.
>
One thing I do know, however, is that most hams I knew back then over-prepared
for the tests, because the cost and inconvenience of testing and re-testing
were considerable.

Example: Back in 1968, the test fee was $9 - that's $50 or more in today's
money. Quite a bit of money for an eighth-grader like me. Since the tests were
only given on Mon-Wed mornings that were not holidays, I had to wait until
either Xmas break or the summer to take the test - IF the holidays did not
interfere. And due to the mandatory 30 day wait to retest, the maximum number
of tests in a calendar year for me was 4.

And I had it easy, 'cause the FCC office was just a subway ride away. Exam at
8, home for lunch.

>> The written tests aren't an EE final ... never were, never were meant
>> to be, never should be.
>
>Absolutely correct.

I've taken and passed many "EE finals" and I agree. Funny thing, though - even
a Ph.D in EE does not give one a pass on the ham license tests. I remember
Elmering my advisor in college, (a full professor in EE) who eventually became
a ham. Brilliant guy, but had no experience with practical radio until he ran
into me.
>
>> The issue is that some folks are PO'd that people who already know

>
>I agree, but I honestly don't know where all this "working hard" comes from.
>I think many have lost sight of the bigger picture.

Yup. Including the fact that what constitutes "a reasonable minimum level of qualification to operate safely and with a minimum potential for interference to other radio services" is a very subjective thing.
>
>A. 5-wpm in NOT working hard, it's NOT "jumping through hoops, and many
>believe (Myself included.) it's NOT an unnecessary requirement...it's a very

>very "malady" that some postulate that the "CW immunization" exists to
>protect the bands from. The only group that a 5-wpm "discriminates" against
>are those who don't even want to give it any serious effort to begin with.

Again, agree 100%
>
>C. The code test can no longer be considered exclusionary as there exists a
>no-code license that allows entry into ham radio. Additional privileges
>(Hey, remember that word?) can then be had by passing additional exams. (One
>of them being Element 1.)

Some folks think that there should only be one or two classes of license. I'm not one of them.
>
Let me add:

D. An amateur radio license grants permission for its holder to set up and operate an amateur radio station. Not a broadcasting station, not a military radio station, not any other sort of radio station. Therefore, it is only logical that the tests for said license should be based on what radio amatuers actually DO (like use Morse code) rather than what other types of radio stations do.

>> Too damned many people value their license for what they perceive as
>> some sort of epic, heroic effort that they made to get it, rather than for
>> what it allows them to do (and the latter is where the value of the
>license
>> lies).
>
>I agree, no heroic effort at all...just a "license to learn." ;-)

'zactly.

That's true. However, you have not stated how small the membership actually is.

>Nor, I might point out, does ARRL's membership constitute a majority
>of US hams ... more like a bit less than 25% IIRC the last numbers I
>noticed.

Quite true. Nor does ARRL claim to constitute a majority, either.

Let's see....NCI has maybe 3,400 US hams as members out of 685,000 US hams, that's just under 1/2 of one percent. That's a lot smaller than 25%, doncha think?
>
>The majority I was referring to was a majority of all licensed US hams

How do you know what the majority of all licensed US hams think about code testing? Do you have a valid, recent survey, or just wishful thinking?

The FCC went with the MINORITY opinion on the code test issue, based on the comments and various surveys. Of course, they are in no way required to follow the majority opinion on anything.

>(since you were talking about NCI's level of influence with the FCC)

No, I was talking about what the majority opinion of US hams is, and was. Also other interested parties.

Empty Head, why must t2fd cost more than other antennas of its kind? Why must a discussion about such an antenna in military and government use pass amateur "standards?" What is the amateur standard, and where is it codified?Why must amateurs run their antenna preferences by you and your cronies on rraa? Are you now saying that amateur radio operators with half a brain lack freedom of choice in the kind of antennas they choose to implement? Do full brained amateurs get to choose their own antennas, or must they march lock step with you?

> Then they'll tell you how they contacted Australia with a

Usenet dates back to the very beginning of the Internet. I started using both back in 1990, when I got my first 1200-baud modem while stationed in England. Upgraded to the blazing speed of 2400-baud in Colorado Springs in 1991, where I became a serious Fidonet/Usenet/AOL user. I subscribed to a dozen Bulletin Board Services in Colorado Springs as a member of the Colorado Springs PC Users Group (COSUG), where I was a member of the Database and Communications user's groups. I participated mainly in the Fidonet Ham and Ham Radio (they were much different) echos, and made an occasional appearance on rec. radio.amateur.misc, which was starting to get really bogged down with the whining of the NCTA, thereby causing the creation of rec.radio. amateur.policy. rrap seemed to generate a lot of interesting message traffic, and it became quite satisfactory to deliver laser-guided logic bombs into the argument bunkers of the NCTA whiners, so that's where I concentrated my efforts from then on.

I would do anything to possess a complete archive of all messages I've posted on Fidonet/Usenet over the past dozen years. My old computer's hard drive has about a couple of years's worth of the old Fidonet stuff, but none of my early Usenet postings.

No, this false construct of supporting Morse Code testing requirements as being
some sort of "religion" is just more empty NCTA rhetoric. Whenever I see
rhetoric like this being used, the first conclusion I must draw is that those
spouting it are plum out of any sort of logical arguments to support their
cause, and must therefore rely on inane analogies such as this.

>Steav, what was quoted was me. I wrote it. I know what I wrote. But
>it isn't my reading comprehension that's in question; its yours. Now
>tell me why you got my service record wrong, again.

Then you need to re-read what you wrote, Brain, becasue in the space of two sentences, you contradicted yourself.

My reading comprehension's just fine...except when trying to decode Idiotese. You write in Idiotese.

>You've soared past being a simple moron, and for your singularly
>distinctive accomplishment, HQ has approved the moron squared award.

If saying this makes you feel better, Brian, be my guest. When I lost my daughter I lashed out at things too, and while it made me feel better at that moment, it was still wrong.

One day you'll know this too, for you are wrong now.

>You have their permission to put it in your collection with the things
>you did and didn't earn.

At least I know the difference, Brian.

You and your "good buddy" still have some problems in that regard. You with the difference between "authorization" vs "valid", and Lennie for "Amateur Radio" vs "Anything else".

It's really cute.

Riley Hollingsworth recently visited our local club. One of the things he said in his talk was that he had never heard of a complaint of a CW op jamming. It occurred to me at the time, although I didn't get the chance to tell him, that I had heard someone sending 'fuck' repeatedly in CW on a repeater. It's a myth that there's no jamming or swearing on CW.

That argument is bogus on so many levels. "I doubt I'll ever do satellite operations. So no questions on that for me"! "I'm only doing QRP so why am I forced to learn about RF safety". So on and so on.....

>
> I took the writtens way back in the days of FCC-office testing. Even before
> Bash books. How "hard" the tests were is purely a subjective opinion, because
> we don't have the old tests available for comparison.

The old study guides look to be easier, however. I think it was Hans who noted that there will be a natural tendency for people to believe that the tests they took were harder, due to their memory of the difficulty encountered when they took the tests, and looking at new tests with the jaundiced eye of accumulated knowledge over the years.

> One thing I do know, however, is that most hams I knew back then over-prepared
> for the tests, because the cost and inconvenience of testing and re-testing
> were considerable.

I over prepped for the tests too. I took a good while studying the guides. Any question I didn't "get", I looked up in the reference books I had. By the time I was done, I could answer any question in the test.

And before anyon speaks of memorization of the Extra (and I think the general) the answers are mixed up. answer "A" in the study guide ain't "A" in the real test

> Example: Back in 1968, the test fee was $9 - that's $50 or more in today's

Myself, I had almost no RF experience even though I've been an
electroniker for 30 years now. So it was weird for me. Many things I
knew easily, but some took quite a bit of study.

> Yup. Including the fact that what constitutes "a reasonable minimum level of

>>
> I agree 100%.

Here is where i disagree a bit. Perhaps you might agree that if a Phd can
have to expend some effort to learn the written, some people might have
some trouble with the code test.

This is the area in which some of the Pro-coders mess up big time. Just
because it might be easy for you does not mean that it is easy for me.

>>B. As for 5-wpm being an exclusionary tool...puh-lease. I'm also a CBer, the
>>very "malady" that some postulate that the "CW immunization" exists to
>>protect the bands from. The only group that a 5-wpm "discriminates" against
>>are those who don't even want to give it any serious effort to begin with.
>>
> Again, agree 100%

I'm a pro-coder, but I like to let you guys know that all people who have
trouble with Morse code are not people who "don't want to give it
serious effort or are lazy. Some get it easily, some do not. Its a
physical/mental skill.

I agree on Sonny Bono's "musical" abilties, however he acquitted himself rather nicely, I thought, as the Mayor of Palm Springs.

A friend of mine was a Paramedic there and was there when a school bus rolled over. The Mayor went to the scene and lent a hand with IV's, first aid, etc. When the media tried to make him the center of attention, he redirected them brusquely to the Paramedics and Firemen trying to effect the rescue in the bus.

Perhaps not as popular as his ex-wife, but certainly far greater character.

Hey Jeff. Good to see you.

I think you go the attribute wrong. It was Lennie who was asserting HE did raido "24/7", and was once again trying to draw an analogy between the concept of talking to someone far away, and the Amateur comcept of "DXing".

Yes..."DXing" by it's very nature means talking to people far away, but it is also akin to hunting. On a military or maritime channel you don't have to go hunting for your prey nor do you have to contend with 10,000 other folks calling him all at once.

As usual, Lennie's references were in the"first-person-singular" until he was called on it, and only then did he change his story to mean that the >radio station< at which he was a clerk was doing this 24/7, not he.

Hope the WX is a bit warmer in HI tahn it is in TN today! =)

Phil, it is quite easy for you to dismiss the career of others, isn't
it? Most on here would argue that if you do not have a professional
music career, you have no say in what constitutes musical ability,
much in the way they claim if you do not have an amateur radio
license, you have no say in amateur radio.

So, tell us about your music career.

That's really bizarre for someone of such vast experience and
reputation as Riley to make such a claim. If Aaron Jones were still
on here he would add it to his Morse Myths list.

Nearly every case of "jamming" I've ever heard was with CW. Even
K3LT's "friend" is reported to send "QFU" on code.

No, Steav, you tell me what is wrong with my statements. You cannot.

You merely misunderstood that declining jump school scuttled me out of
the service. The contradiction is in your mind, along with a lot of
other stuff. Blow your nose, maybe your mind will clear.

You've earned "cubed."

I think what he meant was CW ops jamming other CW/digital ops.

In other words, jamming in the 'phone bands is much, much more common that in
the CW/digital bands.

> It occurred to me at the time, although I didn't get the chance
>to tell him, that I had heard someone sending

(expletive deleted)

>repeater.

I don't doubt it, even though I've never heard such on a ham repeater.

>It's a myth that there's no jamming or swearing on CW.
>
Of curse it's a myth. The point is, however, that it's far less common on CW
than on voice modes. Just read the FCC enforcement letters. Lots of enforcement
actions against hams using voice in the voice bands, extremely few (if any)
against hams using CW or digital in the CW/digital bands.

Of course it's bogus, but some (not all!) anti-code-test folks keep
using it. And they use terms like "hoop jumping" and "forcing it down
people's throats" very selectively.

>"I doubt I'll ever do satellite
> operations. So no questions on that for me"! "I'm only doing QRP so why
> am I forced to learn about RF safety". So on and so on.....
>
Exactly! Particularly when the questions deal with specific
technologies rather than rules & regs.

Of course no other mode has a stand-alone, pass-fail test. But if you
look at the number of written questions that fail the "necessary"
critierion, it's clear that most of the written falls into the "hoop"
category.

> > I took the writtens way back in the days of FCC-office testing. Even before

I disagree! The old guides, when looked at in their entirety, covered
a lot of ground. And since they were not the exact Q&A, but rather
essays, one could not be sure what would and would not be the focus of
a test question.

However, unless we have the actual tests to compare, it's not only
subjective, but based solely on decades-old memories.

> I think it was Hans who
> noted that there will be a natural tendency for people to believe that
> the tests they took were harder, due to their memory of the difficulty
> encountered when they took the tests, and looking at new tests with the
> jaundiced eye of accumulated knowledge over the years.

Quite true, in some cases anyway.

Plus there is the "total difficulty" effect. FCC's old policy of
making test session access inconvenient and expensive (see below)
increased the perceived difficulty of the test process, regardless of
the test difficulty.

I think it's a GOOD thing that the exam sessions are much more
accessible today.
>

Same here! But we also hear of hams who take the test with little or
no preparation, and those who retest several times on the same day and
finally manage to pass.
>
> And before anyon speaks of memorization of the Extra (and I think the

Sure - but that's not how most folks would memorize the test.

Of course the difficulty varies widely with the individual. Most of
what my advisor had to learn was rules/regs and practical stuff vs.
theory.
>
> This is the area in which some of the Pro-coders mess up big time. Just

Of course!

The main point Bert and I are making is that 5 wpm is not
"unreasonable" or "irrelevant" to an HF amateur radio license.

> >>B. As for 5-wpm being an exclusionary tool...puh-lease. I'm also a CBer, the

True - but in many cases presented here, the person simply refuses to
even try.

Riley is the model PR man, makes it up as he goes along,
always pleasant. Enough reliable information from the proverbial
"informed sources" in the commission has leaked out about what
Riley's marching orders were when he assumed his current position.
Ever notice how there are not any license revocation hearings, even
for the worse of the worst offenders? Don't count on any either,
especially all you experts who think K1MAN's license is going to
be suspened or revoked. Don't hold your breath! Riley is aware
of amateurs who have used their licenese privliges in the commission
of felonies, and he has done squat, as far as suspending or
revoking their ham radio licenses.

> electronics.

But what had Ed being doing before he earned his General? Which is the
kernel of my point. I was an adolescent technoid too, I got my Novice
when I was 14 or so and my General within the following twelve months.
But I did not just get outta bed one morning and decide to take the
tests and become a ham. I was futzing radios in my late single-digit
age years and by the time I got around to taking the Novice test I'd
built several simple SWL & HF ham rcvrs which led me to ham radio. My
bet is that Ed followed a very similar course and that's what I'll lay
my cash on. So of course the General writtens were a piece of cake for
Ed and myself and 'most everybody else around here given those kinds
of preparatory educational experiences. Thus my contention is that
Ed's comment about how easy the tests are only applies to those with a
background in electronics before they take the tests.

Proficiency at WHAT??

> IOW, I would not consider a tech who didn't
> understand extra theory completely to be clueless ... he/she is
> a beginner and is supposed to be learning, not to know it all.

What about all the Techs out there today who have been licensed for
decades and could care less about "learning enough" to take a test to
get on HF? Any number of those are far-end electronics gurus who can
give you and every other EE in this NG a real run for yer money on the
"technical" side.

> On the other hand, since I used the phrase "know it all," I should
> clarify that I don't expect extras to "know it all" either ... because
> there is so much that goes beyond the content of the extra QP that
> NOBODY could be expected to know it ALL ...

OK, well then what defines the line which separates Extras who are
"technical enough" from those who are not "technical enough" as it
relates to 97.1?

> But too much of ham culture is built around this pecking order (and
> attempting at all costs to maintain it) ... that hurts ham radio and I
> would like to see it die away with the new generation of hams.

So lets run with this one a bit: Right off yer pissing upwind in a
hurricane if perchance you think that any changes at all in the tests
are about to ameliorate The Pecking Order syndrome in ham radio. Let's
take it out to the limit. All hams have the Uniclass license which
does not require a code test. So the 40wpm types will continue to
beast the crap outta the codeless motormouths. "I'm more of a ham then
you are because I *built* my reddio". "Whatta ya mean ya only have 115

confirmed? I have 315." "What's this nonsense about you needing an apartment balcony vertical? I have a 15 acre antenna farm, what's yer problem?" Then comes the guys running a pair of 4CX1500s in the 75m Arthritis Net.

None of it is gonna go away just because the code tests go away if that's your bottom line. Ridiclous concept. Egalitarianism is a wet dream. Particularly in ham radio.

So, let me see if I've got this right. You're saying that only us phone
ops are the victims, and just because they don't send obscene CW at the CW
end of the band that somehow makes CW better?

>Steve, I don't keep company.

That's apparent. Perhaps if you did you might assimilate some knowledge about Amateur Radio, especially as it pertains to regulatory matters vis-a-vis licensure and authorizations.

>Len and I happen to agree on many
>things. One is free speech, and the right to petition our government.
> Both are in the Bill of Rights that you must have sworn to defend and
>protect at one time or another in your life.

And both of you may and neither of you have been impeded by anyone that I am aware of, least of all me.

BTW, I know Lennie the Lame loves to wave that "petition the government" and "free speech" thing, but he sure hates having his rants blunted. So do you. Birds of a feather. You love to TRY and make an issue of "your rights" when your rights were never infringed upon.

You see, you and Lennie have another trait in common...You like to try and "shame" others into not posting by somehow insinuating that your rights are being infringed upon. What a bunch of mularkey, and I don't fall for it.

>You see, if Len were not on here without a license, there are those in
>the PCTA who would insist that only Amateur Extras

No...If Lennie HAD a license and PARTICIPATED in Amateur Radio, he MIGHT have a broader knowledge base upon which to make his many "opinions". However he does NOT have that benefit and continuues to step on his own toes all-the-while asserting this "information" as fact.

His frequent spamming of this NG with retelling after retelling of the development of SINCGARS and his railing aginst Dave Heil over "order wires" is his attempt to hide his own ignorance as it pretains to a radio service of which he knows little but hates so much.

Unfortuntely YOU are falling for THAT.

My arguments with Lennie are NOT about Code testing. It's about his blatant lying and gross misrepresentation of what Amateur Radio is about and what it does. His misrepresentations are so easily disproven as to be laughable. However I refuse to allow it to go unchallenged. Pathological liars SHOULD be confronted and thier lies exposed for what they are.

Have you seen him provide one iota of "evidence" about ARRL "dishonesty"...?!?!

My arguments with Lennie are about his cowardly misrepresentation of his association with U. S. Army KIA's in order to make himself look more "heroic". He is anything but....

My arguments with Lennie also extend to his blatant use of offensive and denigrating adjectives that HE uses to "describe" his "opponents", yet flails about as "VICTIM!" when it is revisited upon him. He's a two-faced punk, and that's my LIBERAL opinion of the putz.

Intended or not, you're rubbing up against him pretty closely, Brian. And like it or not, you ARE "keeping company" with him. You do it when you publically defend him...

Kinda like the post this is quoted from....

Getting the picture...?!?!

Steve, K4YZ

>make my point about so many other subjects on rrap, you have your mind
>made up before you have the facts. You close yourself off to facts,
>and choose to remain misinformed, ignorant, and wrong.

Quite the contrary. My "position" on Morse Code testing bearing witness.

On the matter of your alleged T5 operation, Brian, I sat back for quite a while on that. It was apparent that you didn't have a thourough understanding of what your obligations were IRT "authorization" to operate, and were equally confused about that "authorization" as opposed to "DXCC" "acceptance.

>Brian and Len
>and Mark Morgan and Carl and Cutie Boy and Hans and Mike Deignan and
>on and on are not your real problem.

Talking about yourself in the third person? And yuo say >I< ahve a problem?

As for Mark Morgan, you were right about one thing...I swore an oath in the Armed Forces. As a matter of fact, I recited it each time I was "discharged" and subsequently re-enlisted, and on each promotion, so count that 9 times. And between my experiences in CAP and the United States Marine Corps, I am not about to let some low-life like Morgan misrepresent himself as an officer of ANY rank when in the same breath he boldly proclaims his willingness to lie...especially for such silly goings-on as this forum.

And Lennie...?!?! Well, his dubious experience notwithstanding, Lennie is a pathological liar. He feels quite at liberty to make up what ever story he cares to in order perpetuate his "cause", the truth and other people's reputations be damned, just as long as everyone else think HIM untarnished.

He brings it on himself.

Carl? I just let him roll on. He's got his points to make, is brash about it, but manages to do it without the name calling and character abuses of Lennie.

Cutie Boy? Just a punk with an audience.

I basically blow off most of Hans' retorts s the usual MasterChief vs Marines kinda stuff, and I don't know WHAT makes you think I have any issues with Mike Deignan.

>You are your own worst enemy.
>When you figure that one out you'll get back on track to sane living.
>Good luck. I mean it.

I know you think this is appropriate, but I see it as an attempt to redirect from what some see as a failed attempt to dig yourself from the T5 debacle.

>And I apologize for the moron and mental jump school remarks.

Not necessary, but acknowledeged and appreicated. Thank-you.

W4RNL has modeled the antenna known as the "T2FD" and the results are on his excellent website. He calls it a "WBFD" (wide band folded dipole) which is a more accurate name.

His modeling shows the WBFD to be, at best, about an S-unit worse than a doublet of equal size. At worst, the WBFD is several S-units worse. And that's free-space modeling - the effects of ground loss and loss in nearby objects must be added to get realistic numbers.

A typical HF halfwave dipole in free space is pretty close to 100% efficient (nearly all of the power fed to it gets radiated). The WBFD's efficiency varies from maybe 30% at best to only a few percent at worst. The WBFD is least efficient at the low-frequency end of its range. Power that is not radiated is converted to heat in the loading resistor. There is nothing new in the design - it dates from the mid-1940s.

The only advantage the WBFD offers is its ability to present a low SWR on any frequency within its range without the need for adjustment. This can be of some use in other radio services, particularly those who can compensate for the WBFD's inefficiency by using higher transmitter power.

But since amateurs are limited to narrow slices of HF, and transmitter power is often at a premium, the WBFD is of questionable value as an amateur antenna.

Of course even an inefficient antenna will work some stations under the right conditions, as evidenced by the results obtained by hams using makeshift antennas, and those running HF mobile. In those cases, efficiency is traded for compactness.

But since the WBFD is at least the size of a G5RV or trap dipole, and costs at least as much as a conventional dipole plus a tuner, it is a mystery why any ham would use a WBFD.

All that shows is that a SSB operator remembers four letters of the
International Morse Code. Considering the 'fists' and the 'speeds' I
seriously doubt the offender is a real CW operator.

What SSBer would sit there and do that over and over?

Well, OK, there are a few.

But MUCH more likely is someone just put that into a memory keyer.

Now how many SSB only types would own a keyer?

I wonder... How many rigs would have that capability 'built in' nowadays...

Mike

That still don't make him a CW operator.

From what I have heard (CW Jammers) they are not bright enough to realize they need to put an offset to make the 'note' readable. Unless their rig just happens to offset they end up being zero-beat.

For you slopers zero beat means...you hear nothing. Your carrier is dead on frequency.

As mentioned earlier the fists I have heard is just a example of a very poor sender. Bad spacing, slow and choppy. etc.

No...its not a CW guy doing this trash.

What antenna or antennas is/are "like a t2fd"??

> Why must a discussion about such an antenna in military and government
> use pass amateur "standards?"

If you actually bothered studying even 1/4 of the innumerable threads
in RRAA abt the t2fd you would know why t2fd's are not a very good
idea in ham radio except under unusual circumstances. 'Course then agn
a t2fd might be just the ticket for you, if there was ever an "unusual
circumstance" it's YOU.

> What is the amateur standard, and where
> is it codified?

Ya buy the ARRL Antenna Book. Ya open it to page one. Even you can't
possibly need the map from there.

UhOh . . wrong.

Nobody out here gives a rat's patooie abt what antennas you use, knock
yerself out, go work yer dummy load. You're not "arguing" with me or
anybody else in RRAP or RRAA, you're tripping out on some goofy
tangent trying to "politicize" simple dipole physics. Or something
only you could come off the wall with. Nobody gives a rat's patooie
abt that either.

Robeson's selfish little mind to understand the Glory and
Honor in what He says is "true." :-)

The FCC *set* the regulations for US amateur radio. Not a single
staff member or commissioner is required to be granted a US
amateur radio license in order to make and enforce those
regulations. Why is it so "necessary" for all in a discussion
to be granted such a license?

>>Len and I happen to agree on many
>>things. One is free speech, and the right to petition our government.
>> Both are in the Bill of Rights that you must have sworn to defend and
>>protect at one time or another in your life.
>
> And both of you may and neither of you have been impeded by anyone that I
>am aware of, least of all me.

Oh? Robeson's output in this newsgroup is a constant, almost
unremitting calumny of anyone who does not agree with his
Dill Sergeant pronouncements.

> BTW, I know Lennie the Lame loves to wave that "petition the government"
>and "free speech" thing, but he sure hates having his rants blunted.

Robeson's constant insult output does require wasted time in
showing that his Lies and Distortions ARE lies and distortions.

One of the classic attempts at intimidation was the home page
on AOL, all because of his childish rage over a mistake. That
lasted less than three days since it was a blatant piece of
evidence for a civil case that could have hurt AOL and broken
Robeson financially. Robeson doesn't think, flies into a rage

at the slightest provocation. Emotional instability, QED.

>So do
>you. Birds of a feather. You love to TRY and make an issue of "your rights"
>when your rights were never infringed upon.

Sorry, badass Dill Instructor, but LIBEL, however slight, is still
LIBEL with or without capital letters. Robeson continually puts
himself into a libelous position that he cannot extricate.

Robeson continually states that discussion opponents have
"really" said something even though what was written was
obviously not so. Again, that is libelous.

> You see, you and Lennie have another trait in common...You like to try
and
>"shame" others into not posting by somehow insinuating that your rights are
>being infringed upon. What a bunch of mularkey, and I don't fall for it.

No such thing. Robeson seems to want full "NCO control" over
the troops even though US amateur radio is NOT the Corps and
he has no "rank" in here. Robeson cannot tolerate opposite
opinions, does not control his rage and displeasure...yet demands
that of his opponents.

>>You see, if Len were not on here without a license, there are those in
>>the PCTA who would insist that only Amateur Extras
>
> No...If Lennie HAD a license and PARTICIPATED in Amateur Radio, he MIGHT
>have a broader knowledge base upon which to make his many "opinions". However
>he does NOT have that benefit and continuues to step on his own toes
>all-the-while asserting this "information" as fact.

QED. Robeson issuing a "commandment" even though his
"tablets" are only a Bayer product out of a bottle and his
mountain was just the third step on the front walk. :-)

Only the FCC grants US amateur radio licenses. Not a single
staffer or commissioner of the FCC is required to be granted an
amateur radio license in order to make and enforce the amateur
radio regulations. The FCC decides on regulation alterations
but allows ALL citizens to comment freely.

Commentary on GETTING INTO US amateur radio does NOT
require already being into it. If it did, how could the very first
amateur licensee get that license? :-)

US amateur radio is NOT some "strange technology" that can
"only be understood by already-licensed amateurs." Amateur
radio as defined by humans is only a legal classification...the
physics of radio technology is the same regardless of human
classification.

Robeson seems enraged that others could have gathered
experience in radio communication before him (including his
birth) on HF...and then gone on to LF, VLF, VHF, UHF, and
higher as a professional. It seems to be a greater rage
because he had NO prior military radio experience and had
NO working experience in radio engineering (purchasing
agent order-filling does not count) in civilian life.

All that is Robeson's obvious problem. Personal rage is not
justified nor an excuse for dishonorable behavior.

> His frequent spamming of this NG with retelling after retelling of the
>development of SINCGARS and his railing aginst Dave Heil over "order wires" is
>his attempt to hide his own ignorance as it pretains to a radio service of
>which he knows little but hates so much.

Once again, a LIE about "hating amateur radio." Disinformation
certainly.

Amateur radio is a fun hobby, a recreation. It is NOT the Corps
that demands unswerving, undying devotion to "Corps, god, and
country" [in that order]. Robeson is NOT a Dill Sergeant NCO
in amateur radio. He is very confused in civilian life.

The "AN/PRC-119 family" of military radios is the standard small-
unit (battalion size units and below) radio in the US military. Over
a quarter million of them have been produced in the last 14 years.
It provides a plateau-jump in portable size in performance that
could be a springboard for new designs in amateur radio.
Robeson seems angry over the mention of a military model that
He did not know about nor ever handled even though quantities
make it the largest and longest production run radio model ever
made for the US military.

Roughly three years ago, Heil attempted a small snow job of
amateur participants in here with the tale of "using CW for an
RTTY circuit order-wire as a clever idea." The term "order-
wire" is not used much in US amateur radio yet is a common
term in commercial and military communications, both in
landline and radio. Robeson has no experience in such
communications thus increasing his displeasure at loss of
control over subjects.

> Unfortuntely YOU are falling for THAT.

No one "falls" for any arguments that are based on spite, rage,
displeasure, or against the credo of the USHC (US Ham Corps).

Arguments for and against are simply made coherently and
with some detail to state a particular case. Where necessary,
references can be given to augment positions or statements.
Robeson has a habit of simply making declarations or just
pejoratives against a communicator's person. In the last year
he has succumbed to dishonoring US military veterans who

argue against his viewpoints.

Robeson has a selfish little habit of modeling all of US amateur radio on what He believes, what He experiences, what He does. Sometimes he does not bother with such modeling but rather DEMANDS that All Believe As He Does...about nearly everything.

> My arguments with Lennie are NOT about Code testing.

Robeson cannot argue. On the issue of code testing necessity, he did not bother with rational arguments to support his side but indulged in a remarkable long-time constant barrage of lies, distortions, personal insults, "rewriting" of what was clearly written, attempts at character assassination, and general rage that was clearly libelous.

Robeson simply cannot tolerate an opposite opinion.

>It's about his
>blatant lying and gross misrepresentation of what Amateur Radio is about and
>what it does.

US amateur radio has been adequately defined in all aspects by its participants and organizations in the various media since before 1912. That definition and description is multi-faceted, varied, widely-ranging. Amateur radio is a fun hobby, fine recreation, technically challenging and rewarding for those who venture into the various radio technologies.

Robeson, Heil, and Kelly all seem fixated in here on Their Idea of US amateur radio is what "everyone must believe" (or be subject to the usual pejoratives). In Robeson's case he goes too far with his insults, moving from disinformation to outright lies...because Robeson cannot divorce himself from His Idea of what amateur radio is and what amateur radio really is to 620+ thousand licensed radio amateurs.

>His misrepresentations are so easily disproven as to be
>laughable.

Robeson has NOT "disproven" anything. He has presented only His Idea of what amateur radio "is" and demands that others obey that viewpoint. That's another manifestation of the "ex-military-NCO Dill Sergeant" attitude. All must march on his command, to his cadence.

>However I refuse to allow it to go unchallenged.

That's the pity of all this, the cause for a constant barrage of pejoratives, commands, disinformation, and general uncivil and dishonorable behavior of Robeson.

Robeson cannot stand opposition in anything. QED.

>Pathological
>liars SHOULD be confronted and thier lies exposed for what they are.

Robeson has no credentials in psychology nor is he a medical
doctor. The use of "pathological liar" labeling is interesting, but
it only reinforces his own petty personal demand that everyone
Believe in what He Believes.

> My arguments with Lennie also extend to his blatant use of offensive and
>denigrating adjectives that HE uses to "describe" his "opponents", yet flails
>about as "VICTIM!" when it is revisited upon him. He's a two-faced punk, and
>that's my LIBERAL opinion of the putz.

No, it is just Robeson indulging in another immature, uncontrolled
spasm of rage at being opposed in anything. Robeson cannot
tolerate opposition of any kind. His "solution" is to disregard
civility for invective, seek "destruction" of his opposition by any
means possible.

In a clinical sort of way, Robeson's output can be interesting to
those interested in human psychology. It's a small melange of
psychological disorders manifesting themselves in rather classic
elementary syndromes. Sort of an on-line "Psych 101" workbook.

It does waste nearly everyone's time in here and that's a pity for
all the rest. It may have some cathartic effect for Robeson so all
is not a waste. :-)

A horse has "gait." Are you a veterinary nurse too used to four-footed creatures? Why do you treat others a mere animals?

>>The "use of CW as an RTTY order-wire" is ridiculous on the
>> face of it..(SNIP)
>
> So's your claim to an extra lite out of the box.

I made no claims of going for that, only that it COULD be done.

Why not? I got my First Class Radiotelephone (commercial) license in one examination session in 1956 at an FCC field office in Chicago. Without using any Q&A book.

Sgt "Steam" Putz wasn't able to do that in later years.

> So's your claim of ARRL dishonesty.
>
> So's your claim of ARRL VE dishonesty.

I never said ARRL was "dishonest," just that their actions on "examining" two six-year-olds and "passing" them, then publicizing them on their website was SUSPICIOUS.

But, never mind that...you expect everyone to Believe in ARRL, that they Never Do Wrong (for They are Holy).

> So's your embellishment of your Army "service" by associating yourself
>with KIA's who's names you don't even know...

I was assigned to the 8235th AU, Tokyo, Japan, beginning in February 1953 when it was named the 71st Signal Signal Service Battalion. During the beginning of July, 1950, the Far East Command sent 19 members of the 71st to Korea along with radio equipment to bolster communications there after the North Korean forces had

invaded South Korea. Their transport aircraft crashed on landing, killing all, including the four of the aircraft crew.

The 71st Signal Service Battalion (later renamed Far East Command Signal Service Battalion, same Army Unit number, in late 1955) was one of the first to be formed during the Japanese Occupation in 1945. That signal battalion was attached directly to Far East Command headquarters.

I have the name, rank, Army Serial Number, of each one of the 19 signalmen who died in that July, 1950, crash. I also have the name, rank, ASN, of each of the six members of the 71st who were wounded in action in Korea after July, 1950. That's a form of respect and honor for those men lost or wounded in the service of their country in wartime. I was proud to be in the same battalion as they were.

I know the entire history of my former military unit, before, during, and after my military service, all from referencible sources and most being official Army sources.

The Putzman seems to think that NO ONE can possibly take pride in the service of their country unless his Royal Hindness "approves" of it. But, what does the Putzman say about his own service?

"Seven times in hostile action!" No references, no details, no names, no verification, no nothing except a very general statement of standard braggadoccio.

Putzman never did any military communications. He can't even name on of the standard radios of the USMC for small (or large) unit operations.

Putzman once claimed he "can't speak about 'classified' equipment" as if US DoD contract awards and Defense Electronics trade magazine were "classified" documents!

Total BULLSHIT on the "classified" claim. US military communications equipment is known and named in public disclosures. Putzman just doesn't know military radio equipment so he blusters and bluffs trying to avoid the appearance of ignorance only to emphasize it.

Putzman wants to chastise others for not talking about amateur radio subjects...while he goes on and on about the Civil Air Patrol, hang gliding, Tennessee STATE guard (not affiliated with any US military or national guard), national politics, and old popular singers of two or more decades in the past. Then he wants to insult and demean others who served their country because their opinions about amateur radio do not "live up to His credo of the

amateur corps, God, and country." Sad case of psycho "transference," substituting amateur radio for The Corps.

US amateur radio is NOT a branch of the US military. It is called a "service" only in that the word "service" in Title 47 CFR is a regulatory term denoting a type and kind of radio activity.

US amateur radio is a hobby activity, recreation, and NOT vital to national defense. Amateur radio could cease tomorrow and the nation, the states, the cities could all go on as before without interruption or dimished operation. All amateur radio transmissions during World War 2 were banned yet the USA was one of the winners of that conflict.

Putzman won't accept reality. He lives in a fantasy of glory and honor in his mind, putting down everyone who does not share that fantasy. He wants to drag all discussion oponents to the ground in order to make himself look superior. He will not hesitate to insult, demean, and garbage-mouth any US military veteran just to satisfy his little personal fantasy of glory and honor that exists only in his mind. He is a discredit to the Corps, god, and the country.

To be honest, prior military service does NOT have any direct bearing on amateur radio...but Robeson is obsessed with that, continuing to demean and insult veterans of the US military that won't agree with his writing in here.

That is DISHONORABLE conduct for one who claims to be a veteran of the US military.

It may be greater than DISHONOR by Robeson to dismiss 19 casualties of a war that happened before he was born because of his little personal feud with another. Sad.

>operation.

We are all waiting for the claims of experience in military communications from the Putzman. Total so far: ZERO.

In order to "rule" on "compromising an on-going operation" the Putzman has to explain how SW listeners can decode the encryption used by the military. Maybe an NG unit using an old VINSON-compatible mode? :-)

Even more interesting is that "modern" (since before the Gulf War) military communications is primarily above 30 MHz (to 88 MHz) or on 225-400 MHz (UHF hasn't been solely for aircraft for years). But then the Putzman hasn't carried a little '25 or a '77 to "save his whole brigade in 'Nam." Another miseryite claimed that in here.

Whooo! All the "expertise in radio" floating around here, all from memorizing the advertisements in QST every month!
:-)

>
>Military stations will ocassionally QSL a SW listener, if they have time.

AFRTS or MARS stations, perhaps. :-)

Must be an extraordinarily-equipped "SW listener" to identify
a military or commercial SSB transmitter with four channels
of audio, two of those channels carrying four to eight TTY
circuits. 12 KHz bandwidth, voice order-wire mostly silent.

The same goes for any ALE transmitter doing the handshaking
digital thing. Undeciperable without a signal format decoder.

Digital data noises abound on SW (Pactor, etc.) but not much
of that inside the amateur bands. Same with WEFAX but
there are available decoder add-ons for those.

SW BC has been doing digital modulation for three years,
despite the protestations of long-term hams who say "It
can't possibly work!" :-)

>So, tell us about your music career.

Those who know me know that I am intensely involved in choral liturgy - both studying the developent of liturgy as part of worship and participating in same - for over 40 years. After several college-level courses in music theory and performance, I took private voice lessons in solo and choral music during the 1970s and 80s. More bucks than I want to think about have been paid (and continue to be paid) to my voice coach who is quite a liturgical star in her own right. I have long been a member of sunagogue choirs and have served (and still serve) as a fill-in cantor for several synagogues on a regular basis over the years. I have sung in several presentations of major choral liturgy by recognized choral societies - both religious and secular - in the San Francisco area.

I don't do this for a living but it certainly is on a professional level. Any fees or honoraria that come my way are donated to my congregation.

As do most of us here, I have many interests (and hobbies) in addition to ham radio.

I leave appreciation of "pop-rock" "music" to my ex-wife -- that's her taste, certainly not mine.

And my comment was not about anyone's musical ability but about the stuff that they are performing. Sorry, my classical-training snobbishness - may it live forever - is showing through.

1145. 14.275 mhz Proves FCC's Ineffectiveness ...

The truth of 275 can be heard on all modes. One need only listen day in and day out to realize that the frequency makes a mockery of our hobby.

More than the chaotic qrmers is the ever-expanding bulletin of Glenn Baxter, K1MAN. Yesterday, Baxter announced he was punishing us all with non-stop bulletins from 1-5 -- and he did. We know on this frequency his organization conducts its own foreign policy in Iraq, Somalia, Jordan and other places. A few days ago, he declared an emergency that didn't exist. Everyday he clearly advertises his business: "the AARU, your alternative to ARRL."

Our regulator, Riley Hollingsworth, is only one person with his own bosses, and the FCC obviously does not want to be tied into costly litigation. (In the past, Baxter as always litigated in his own name, and I can tell you, he is a paper tiger.)

If the Commission fails to take constructive, exemplary action, the voluntary compliance it has come to expect from us will deteriorate.

Why are some with far weaker cases regulated while K1MAN with the strongest case for regulation carries on with impunity?

For the FCC, it is the hour of decision!

ARRL claims to be "THE National Society for Amateur Radio" ... they
most certainly claim to speak for all when they file comments with the
FCC etc. Not directly in so many words, but it is CLEARLY implied.
Fortunately, the FCC understands the reality.

And yours are?

> Sorry you didn't get a chance to find that out.

The Air Force knows the truth. You obviously don't. Making such
statements as the one above lands you squarely in the "liar" category.

> >> Now watch Sgt Putz come roaring in on that one!

If you abhor it so, then why do you recreate and/or embellish my
career?

> Watching the two of you dance together is really heartwarming!
>
> A rear step forward for civil rights.

Which direction would one be facing to take "a rear step forward?"
You must have been loved in formation. Scuffed up shoes and all.

Could it be that the FCC no longer has a pool of trained CW operators
to monitor amateur CW communications?

Don't forget that Dick Carrol sends code so attrociously that machine
copy is not possible.

You've not followed the Dill Sergeant's ORDERS to the troops
on comportment in his mystical idea of amateur radio. If you
sass the Dill Sergeant you wind up on company punishment
:-)

That's in parallel with the "26-patent" kid in Pennsy who
gave you implicit ORDERS on which antenna to use. :-)

There is only ONE way...their way. That's the way is IS!

What next, close-order drill? :-)

I was a fireman in Orange County (CA) back in the early 70s. I can
remember being a rookie doing CPR on an elderly gentleman -- I was
applying the O2 and the other fireman was doing the chest compressions,
making remarks about the ribs breaking. The eerie thing was seeing
tears well up in the victim's lifeless eyes. If that wasn't enough,
once we got him into the ER room I almost passed out (literally)
when I saw the doctor jab him in the heart with a very long needle.

Do you mean "Not Invented Here", Hans?

If so, that's not the case. The WBFD has been around a long time - I learned about it from a 1948 QST article.

What the WBFD offers is convenience at the price of efficiency. As both an EE and amateur radio operator, I say the tradeoff is not worthwhile for most amateur radio applications.

Tell us, Hans - would YOU use a WBFD at your ham station instead of a conventional dipole of equivalent size?

Nope.

I'm saying that jamming and obscenity are extremely rare in the CW/digital parts of the bands. So rare that enforcement actions against them are practically unknown. Much rarer than those sorts of violations in the 'phone bands. Since many if not most HF ham rigs manufactured in the past 20 years or so have built-in electronic keyers, and many have a memory feature, sending a word or two of Morse with them does not require a lot of skill.

There are certain frequencies in the 'phone bands, (3950, 14313) and some VHF/UHF repeaters (W6NUT) that have become infamous for poor operator behavior. No such freqs exist in the CW/digital bands. Interesting.

If the use of a certain mode results in far fewer violations by those using the mode, doesn't that make the mode somewhat better?

Reasoning has been explained often enough for it to have sunk into your
noggin by now.

> If the TTY works
> at all, then it can be used to send administrative information
> about the circuit just as well as regular message traffic.

Yep, and if it doesn't work, you could send information about the
circuit until your next birthday and you'll never be able to pass any
information about the RTTY circuit.

> TTY
> does it faster than any manual telegraphy with the advantage
> of printed copies at both ends as well as the ability re-send
> in reverse to confirm good copy.

...or it doesn't do it at all.

> communications.

Who said anything about mode mixing? The fact that propagation could be poor enough to prevent either the RTTY circuit to pass traffic or for a RTTY order wire circuit to work are precisely why CW was used.

N2EY: "Besides, here's a simple, plain fact:

Those "senior moments" must be overtaking you on a more frequent basis.
You made some stupid comment about me being an "Ugly American". For it
to stick, you'd have to show evidence that I'd exhibited such behavior
toward a foreigner. My comments directed to you certainly can't be
considered such unless you are other than a citizen of the United
States. Since it appears that you ARE a citizen of the U.S., you're
full of beans.
